Java and JVM Christopher Panaretos,2021-12 ~ Welcome to Java & JVM ~ Java programs are written in the Java programming language, which is a plaintext language. Its source code is stored in a .java text file, which is then converted to another data format, the .class file, by the Java compiler called javac. The information in the .class file is the same information from the .java file, but it has been converted into another format, called the ClassFile format. The ClassFile data format is not designed to be human readable, but it can be read with the program called javap. If you are trying to learn Java programming, it turns out that understanding how the Java source code language is represented in the compiled .class files is very helpful, because the ClassFile format is what is used by the Java Virtual Machine to run your program. Seeing how your source code is processed by the JVM will help you understand several fundamental concepts in Java, which is helpful when writing Java programs. How to Disappear Frank Ahearn,Eileen Horan,2019-10 For the first time in paperback we bring you the authoritative and comprehensive guide for people who seek to protect their privacy as well as for anyone who's ever entertained the fantasy of disappearing--whether actually dropping out of sight or by eliminating the traceable evidence of their existence. Written by the world's leading experts on finding people and helping people avoid being found, How to Disappear covers everything from tools for disappearing to discovering and eliminating the nearly invisible tracks and clues we tend to leave wherever we go. Learn the three keys to disappearing, all about your electronic footprints, the dangers and opportunities of social networking sites, and how to disappear from a stalker. Frank Ahearn and Eileen Horan provide field-tested methods for maintaining privacy, as well as tactics and strategies for protecting personal information and preventing identity theft. They explain and illustrate key tactics such as misinformation (destroying all the data known about you); disinformation (creating fake trails); and, finally, reformation--the act of getting you from point A to point B without leaving clues. Ahearn illustrates every step with real-life stories of his fascinating career, from undercover work to nab thieving department store employees to a stint as a private investigator; and, later, as a career skip tracer who finds people who don't want to be found. In 1997, when news broke of President Bill Clinton's dalliance with a White House intern, Ahearn was hired to find her. When Oscar statuettes were stolen in Beverly Hills, Ahearn pinpointed a principal in the caper to help solve the case. When Russell Crowe threw a telephone at a hotel clerk in 2005, Ahearn located the victim and hid him from the media. An indispensable resource not just for those determined to become utterly anonymous, but also for just about anyone in the brave new world of on-line information, How to Disappear sums up Ahearn's dual philosophy: Don't break the law, but know how to protect yourself.
