The Bitcoin Manifesto Allan J. Stevo,2017-01-18 In 204 pages The Bitcoin Mainfesto is a Bitcoin call to action. It won't belittle your intelligence with the amateurish sales pitches often surrounding Bitcoin. It won't talk down to you by claiming Bitcoin is something that it can't possibly be. It will talk honestly about the flaws and strengths of Bitcoin, which is missing in much of the discussion now taking place. The Bitcoin Manifesto joins the many voices calling for serious dialogue about the serious future of this technology. [Bitcoin] is a techno tour de force... said Bill Gates in a 2013 interview. Gates is right; it is a techno tour de force. Being such an important technology, it's surprising that there are so many lies surrounding Bitcoin. It's opponents lie, it's proponents lie, and anyone watching from the outside of that debate is left clueless. Plenty out there are looking to elevate that debate, including Allan Stevo in The Bitcoin Manifesto. Don't buy this book if you're looking for a how to guide or a Bitcoin for Dummies. Don't buy this book if you are looking for an investment guide. Don't buy this book if you want a Bitcoin puff piece. Buy this book if you want an honest discussion on Bitcoin professionally written by an established entrepreneur and investor. Insightful thought leaders are taking the discussion of Bitcoin to the next level. With the Bitcoin Manifesto, Stevo has put himself among them. Allan Stevo is an entrepreneur and writer based in New York City. As the Chief Market Maker and a founding member of the New York Bitcoin Center, as well as a founding member of several Bitcoin trade organizations and a co-chair of the Digital Finance Committee, Stevo's Bitcoin and Blockchain related work has been documented by over 200 local, national, and international media outlets.

Bitcoin Tim Mathis,2017-11-17 Bitcoin is a digital currency created in 2009 that uses decentralised technology for secure payments and storing money that doesn't require banks or people's names. It was announced on an email circular as a way to liberate money in a similar way to how the internet made information free. Bitcoin works on a public ledger called blockchain, which holds a decentralised record of all transactions that is updated and held by all users of the network. To create bitcoins, users must generate blocks on the network. Each block is created cryptographically by harnessing users' computer power and is then added to the blockchain, letting users earn by keeping the network running. A limit for how many bitcoins can be created is built into the system so the value can't be diluted. The maximum amount is just under 21 million bitcoin. When a new asset class originates, researchers try to understand some basic questions: Can digital assets, with the flagship asset bitcoin, really be considered a serious asset class? Since it is possible to trade digital assets, does it make sense to trade or to invest in these assets? How do digital assets compare to traditional asset classes like equities or bonds?
