The Politics of Cybersecurity in the Middle East James Shires,2022-05-01 Cybersecurity is a complex and contested issue in international politics. By focusing on the 'great powers'--the US, the EU, Russia and China--studies in the field often fail to capture the specific politics of cybersecurity in the Middle East, especially in Egypt and the GCC states. For these countries, cybersecurity policies and practices are entangled with those of long-standing allies in the US and Europe, and are built on reciprocal flows of data, capital, technology and expertise. At the same time, these states have authoritarian systems of governance more reminiscent of Russia or China, including approaches to digital technologies centred on sovereignty and surveillance. This book is a pioneering examination of the politics of cybersecurity in the Middle East. Drawing on new interviews and original fieldwork, James Shires shows how the label of cybersecurity is repurposed by states, companies and other organisations to encompass a variety of concepts, including state conflict, targeted spyware, domestic information controls, and foreign interference through leaks and disinformation. These shifting meanings shape key technological systems as well as the social relations underpinning digital development. But however the term is interpreted, it is clear that cybersecurity is an integral aspect of the region's contemporary politics.

Thinking Security Steven M. Bellovin,2015-12-03 If you’re a security or network professional, you already know the “do’s and don’ts”: run AV software and firewalls, lock down your systems, use encryption, watch network traffic, follow best practices, hire expensive consultants . . . but it isn’t working. You’re at greater risk than ever, and even the world’s most security-focused organizations are being victimized by massive attacks. In Thinking Security, author Steven M. Bellovin provides a new way to think about security. As one of the world’s most respected security experts, Bellovin helps you gain new clarity about what you’re doing and why you’re doing it. He helps you understand security as a systems problem, including the role of the all-important human element, and shows you how to match your countermeasures to actual threats. You’ll learn how to move beyond last year’s checklists at a time when technology is changing so rapidly. You’ll also understand how to design security architectures that don’t just prevent attacks wherever possible, but also deal with the consequences of failures. And, within the context of your coherent architecture, you’ll learn how to decide when to invest in a new security product and when not to. Bellovin, co-author of the best-selling Firewalls and Internet Security, caught his first hackers in 1971. Drawing on his deep experience, he shares actionable, up-to-date guidance on issues ranging from SSO and federated authentication to BYOD, virtualization, and cloud security. Perfect security is impossible. Nevertheless, it’s possible to build and operate security systems far more effectively. Thinking Security will help you do just that.
