Hiroshima John Hersey,2020-06-23 Hiroshima is the story of six people—a clerk, a widowed seamstress, a physician, a Methodist minister, a young surgeon, and a German Catholic priest—who lived through the greatest single manmade disaster in history. In vivid and indelible prose, Pulitzer Prize-winner John Hersey traces the stories of these half-dozen individuals from 8:15 a.m. on August 6, 1945, when Hiroshima was destroyed by the first atomic bomb ever dropped on a city, through the hours and days that followed. Almost four decades after the original publication of this celebrated book, Hersey went back to Hiroshima in search of the people whose stories he had told, and his account of what he discovered is now the eloquent and moving final chapter of Hiroshima.

Oil & War Robert Goralski,Russell W. Freeburg,1987 The full story of the role that oil played in the origins and outcome of World War II.

The Chronography of Robert of Torigni Robert (de Torigni),2020 Robert of Torigni's chronicle is a foremost source of information about one of the most famous centres of power in the entire Middle Ages: the court of King Henry II, duke of Normandy and king of England (1154-89), and his wife Queen Eleanor of Aquitaine (d. 1204). In addition, it includes commentary on many contemporaneous issues and concerns, notably about elections, successions, and deaths of bishops and abbots in Normandy and England, but also about events in France, the Empire, and the crusader kingdom in Palestine.--

Social Policy and Social Work Jo Cunningham,Steve Cunningham,2017-06-05 An understanding of social policy is crucial for social workers as it underpins and shapes the legislative framework that they work within. From safeguarding service users and enabling them to improve their lives, to protecting the most vulnerable in society, social policy also has a vital role to play within social work education. It is important therefore for students to engage critically with social policy. This book introduces policy and shows how it has changed and evolved over time, how it reflects changes in society and how it is applied to everyday practice.

Iranian Elites and Turkish Rulers David Durand-Guedy,2020-04-29 The Saljuq period of the eleventh and twelfth centuries saw the arrival in Iran of Türkmen nomads from Central Asia and the beginning of Turkish rule. Through the example of the city of Isfahan, the book analyses the internal evolution of Iranian society in this period and the interaction of the Iranian elites and Turkish rulers. Drawing on an analysis of a wide range of sources, including poetic and epistolary material, this study fills an historiographical gap and casts new light on the two centuries prior to the Mongol invasion. This comprehensive analytical study provides a new contribution to the understanding of many crucial issues: the cultural divide between Western and Eastern Iran; the military potential of city-dwellers; the attitude of the Turkish rulers toward cities and city life; the action of the famous vizier Nizam al-Mulk; the meaning of the Ismaili uprising; and above all the structure of the local elite, organized into rival networks and largely autonomous vis-à-vis state powers. The study is enhanced by a variety of additional features, including extensive genealogical tables, Arabic script and maps. Providing a new understanding of the cultural identity of Iran, this book is an important contribution to the study of the history of Iran and the Medieval period.

Recognition Receptors in Biosensors Mohammed Zourob, 2010-01-08 Recognition receptors play a key role in the successful implementation of chemical and biosensors. Molecular recognition refers to non-covalent specific binding between molecules, one of which is typically a macromolecule or a molecular assembly, and the other is the target molecule (ligand or analyte). Biomolecular recognition is typically driven by many weak interactions such as hydrogen bonding, metal coordination, hydrophobic forces, van der Waals forces, pi-pi interactions and electrostatic interaction (due to permanent charges, dipoles, and quadrupoles) the polarization of charge distributions by the interaction partner leading to induction and dispersion forces, and Pauli-exclusion-principle-derived inter-atomic repulsion, and a strong, "attractive" force arising largely from the entropy of the solvent and termed the hydrophobic effect. In recent years, there has been much progress in understanding the forces that drive the formation of such complexes, and how these forces are related to the physical properties of the interacting molecules and their environment allows rational design of molecules and materials that interact in specific and desired ways. This book presents a significant and up-to-date review of the various recognition elements, their immobilization, characterization techniques by a panel of distinguished scientists. This work is a comprehensive approach to the recognition receptors area presenting a thorough knowledge of the subject and an effective integration of these receptors on sensor surfaces in order to appropriately convey the state-of-the-art fundamentals and applications of the most innovative approaches.

Handbook of Functional Neuroimaging of Cognition, second edition Roberto Cabeza, Alan Kingstone, 2006-05-05 A new edition of the essential resource on using functional neuroimaging techniques to study the neural basis of cognition, revised with the student in mind; thoroughly updated, with new chapters on fMRI physics, skill learning, emotion and social cognition, and other topics. This essential resource on neuroimaging provides an accessible and user-friendly introduction to the field written by leading researchers. The book describes theoretical and methodological developments in the use of functional neuroimaging techniques to study the neural basis of cognition, from early scientific efforts to link brain and behavior to the latest applications of fMRI and PET methods. The core of the book covers fMRI and PET studies in specific domains: attention, skill learning, semantic memory, language, episodic memory, working memory, and executive functions. By introducing a technique within the description of a domain, the book offers a clear explanation of the process while highlighting its biological context. The emphasis on readability makes Handbook of Functional Neuroimaging of Cognition ideal for classroom use in advanced undergraduate and graduate courses in cognitive neuroscience. This second edition has been completely updated to reflect new developments in the field, with existing chapters rewritten and new chapters added to each section. The section on history and methods now includes a chapter on the crucial topic of the physics of functional neuroimaging; the chapters on skill learning and executive functions are new to the domain section; and chapters on childhood development and emotion and social cognition have been added to the section on developmental, social, and clinical applications. The color insert has been increased in size, enhancing the visual display of representative findings. Contributors Todd S. Braver, Jeffrey Browndyke, Roberto Cabeza, B.J. Seeing the Past with Computers Kevin Kee, Timothy J. Compeau, 2019-02-01 Recent developments in computer technology are providing historians with new ways to see—and seek to hear, touch, or smell—traces of the past. Place-based augmented reality applications are an increasingly common feature at heritage sites and museums, allowing historians to create immersive, multifaceted learning experiences. Now that computer vision can be directed at the past, research involving thousands of images can recreate lost or destroyed objects or environments, and discern patterns in vast datasets that could not be perceived by the naked eye. *Seeing the Past with Computers* is a collection of twelve thought-pieces on the current and potential uses of augmented reality and computer vision in historical research, teaching, and presentation. The experts gathered here reflect upon their experiences working with new technologies, share their ideas for best practices, and assess the implications of—and imagine future possibilities for—new methods of historical study. Among the experimental topics they explore are the use of augmented reality that empowers students to challenge the presentation of historical material in their textbooks; the application of seeing computers to unlock unusual cultural knowledge, such as the secrets of vaudevillian stage magic; hacking facial recognition technology to reveal victims of racism in a century-old Australian archive; and rebuilding the soundscape of an Iron Age village with aural augmented reality. This volume is a valuable resource for scholars and students of history and the digital humanities more broadly. It will inspire them to apply innovative methods to open new paths for conducting and sharing their own research.

A Century of Subways Brian J. Cudahy, 2009-08-25 The transit historian and author of *Under the Sidewalks of New York* delivers a lively and authoritative history of New York City's fabled subway. On the afternoon of October 27, 1904, ordinary New Yorkers descended beneath the sidewalks for the first time to ride the electric-powered trains of the newly inaugurated Interborough Rapid Transit System. More than a century later, the subway has expanded greatly, weaving its way into the fabric of New York's unique and diverse urban life. In *A Century of Subways*, transit historian Brian J. Cudahy offers a fascinating tribute to New York's storied and historic subway system, from its earliest beginnings and many architectural achievements, to the ways it helped shape today's modern metropolis. Taking a fresh look at one of the marvels of the twentieth century, Cudahy creates a vivid sense of this extraordinary system and the myriad ways the city was transformed once New Yorkers started riding below the ground.

Society and Discourse Teun A. van Dijk, 2009-01-22 Van Dijk presents a new theory of context that explains how text and talk are

adapted to their social environment. He argues that instead of the usual direct relationship being established between society and discourse, this influence is indirect and depends on how language users themselves 'define' the communicative situation. The new concept Van Dijk introduces for such definitions is that of context models. These models control all language production and understanding and explain how discourse is made appropriate in each situation. They are the missing link between language and society so far ignored in pragmatics and sociolinguistics. In this interdisciplinary book, the new theory of context is developed from a linguistic and psychological perspective. The theory is applied to the domain of politics, including the debate about the war in Iraq, where political leaders' speeches serve as a case study for detailed contextual analysis.
