Women, Men and News Paula Poindexter, Sharon Meraz, Amy Schmitz Weiss, 2010-12-22 This multi-authored scholarly volume explores the divide between men and women in their consumption of news media, looking at how the sexes read and use news, historically and currently, how they use technology to access their news, and how today's news pertains to and is used by women. The volume also addresses diversity issues among women's use of news, considering racial, ethnic, international and feminist perspectives. The volume is intended to help readers understand adult news use behavior--a critical and timely issue considering the state of newspapers and television news in today's multi-media news environment.

Encyclopedia of Social Media and Politics Kerric Harvey, 2013-12-20 The Encyclopedia of Social Media and Politics explores how the rise of social media is altering politics both in the United

States and in key moments, movements, and places around the world. Its scope encompasses the disruptive technologies and activities that are changing basic patterns in American politics and the amazing transformations that social media use is rendering in other political systems heretofore resistant to democratization and change. In a time when social media are revolutionizing and galvanizing politics in the United States and around the world, this encyclopedia is a must-have reference. It reflects the changing landscape of politics where old modes and methods of political communication from elites to the masses (top down) and from the masses to elites (bottom up) are being displaced rapidly by social media, and where activists are building new movements and protests using social media to alter mainstream political agendas. Key Features This three-volume A-to-Z encyclopedia set includes 600 short essays on high-interest topics that explore social media's impact on politics, such as "Activists and Activism," "Issues and Social Media," "Politics and Social Media," and "Popular Uprisings and Protest." A stellar array of world renowned scholars have written entries in a clear and accessible style that invites readers to explore and reflect on the use of social media by political candidates in this country, as well as the use of social media in protests overseas Unique to this book is a detailed appendix with material unavailable anywhere else tracking and illustrating social media usage by U.S. Senators and Congressmen. This encyclopedia set is a must-have general, non-technical resource for students and researchers who seek to understand how the changes in social networking through social media are affecting politics, both in the United States and in selected countries or regions around the world.

Aid on the Edge of Chaos Ben Ramalingam, 2013-10-25 Many agree that the foreign aid system - which today involves virtually every nation on earth - needs drastic change. But there is much conflict as to what should be done. In *Aid on the Edge of Chaos*, Ben Ramalingam argues that what

is most needed is the creative and innovative transformation of how aid works. Foreign aid today is dominated by linear, mechanistic ideas that emerged from early twentieth century industry, and are ill-suited to the world we face today. The problems and systems aid agencies deal with on a daily basis have more in common with ecosystems than machines: they are interconnected, diverse, and dynamic; they cannot be just simply re-engineered or fixed. Outside of aid, social scientists, economists, business leaders, and policy makers have started applying innovative and scientific approaches to such problems, informed by ideas from the 'new science' of complex adaptive systems. Inspired by these efforts, aid practitioners and researchers have started experimenting with such approaches in their own work. This book showcases the experiences, insights, and often remarkable results of innovative thinkers and practitioners who are working to bring these approaches into the mainstream of aid. From transforming child malnutrition to rethinking economic growth, from building peace to reversing desertification, from rural Vietnam to urban Kenya, the ideas of complex systems thinking are starting to be used to make foreign aid more relevant, more appropriate, and more catalytic. Aid on the Edge of Chaos argues that such ideas and approaches should play a vital part of the transformation of aid. Aid should move from being an imperfect post-World War II global resource transfer system, to a new form of global cooperation that is truly fit for the twenty-first century.

The Compiled Blogs and Collected Reviews Neha Singh, 2019-12-15 This book is a collection of blogs and reviews published on the net on various popular websites. These essays function more like opinion essays dissecting the very nature of being, becoming, withdrawal and the attainment of perfection. The movie and book reviews don't touch upon the technicalities of movie-making, but they deal with an idea, thought, feeling or conflict the book or movie may have evoked in me. The

book is divided into 2 parts. In the first part I have compiled my collected blogs, and in the second half, you get to read reviews of books and movies that I have watched and read. This non-fiction book tries to mock at tradition, and is subversive in its attempt to educate. I hope to prod the discreet reader and provoke strong reactions and emotions for all the touchy issues that I have written about.

Digital Review of Asia Pacific 2009-2010 Shahid Akhtar, 2009-06-03 The biennial Digital Review of Asia Pacific is a comprehensive guide to the state-of-practice and trends in information and communication technologies for development (ICTD) in the Asia Pacific region. This fourth edition (2009-2010) features 30 economies and four sub-regional groupings. The chapters provide updated information on ICT infrastructure, industries, content and services, key programs, enabling policies and regulation, education and capacity building, open source, and research and development initiatives, as well as ICTD challenges in each of the economies covered. The common framework that underpins these reports allows readers to undertake a comparative analysis and assess progress across Asia Pacific. In addition, regional overviews provide a synthesis of ICTD trends, regulatory issues, and lessons for managing innovation in the network economy. The thematic chapters focus on issues in ICT in education, a key area in ICTD. The authors are drawn from government, academe, industry and civil society, providing a broad perspective on the use of ICTs for human development.

Chemistry in Primetime and Online National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2011-08-01 It is critical that we increase public knowledge and understanding of science and technology issues through formal and informal learning for the United States to maintain its competitive edge in

today's global economy. Since most Americans learn about science outside of school, we must take advantage of opportunities to present chemistry content on television, the Internet, in museums, and in other informal educational settings. In May 2010, the National Academies' Chemical Sciences Roundtable held a workshop to examine how the public obtains scientific information informally and to discuss methods that chemists can use to improve and expand efforts to reach a general, nontechnical audience. Workshop participants included chemical practitioners (e.g., graduate students, postdocs, professors, administrators); experts on informal learning; public and private funding organizations; science writers, bloggers, publishers, and university communications officers; and television and Internet content producers. Chemistry in Primetime and Online is a factual summary of what occurred in that workshop. Chemistry in Primetime and Online examines science content, especially chemistry, in various informal educational settings. It explores means of measuring recognition and retention of the information presented in various media formats and settings. Although the report does not provide any conclusions or recommendations about needs and future directions, it does discuss the need for chemists to connect more with professional writers, artists, or videographers, who know how to communicate with and interest general audiences. It also emphasizes the importance of formal education in setting the stage for informal interactions with chemistry and chemists.

Wrecking Ball Stu Woolman, 2021-04-29 *Wrecking Ball* explores, in an unprecedented manner, a decalogue of wicked problems that confronts humanity: Nuclear proliferation, climate change, pandemics, permanent technological unemployment, Orwellian public and private surveillance, social media that distorts reality, cyberwarfare, the fragmentation of democracies, the inability of nations to cabin private power, the failure of multinational institutions to promote collaboration and the deepening of autocratic rule in countries that have never known anything but extractive institutions. Collectively, or even severally, these wicked problems constitute crises that could end civilisation. Does this list frighten you, or do you blithely assume that tomorrow will be just like yesterday? *Wrecking Ball* shows that without an inclusive system of global governance, the collective action required to solve those wicked problems falls beyond the remit of the world's 20 inclusive democracies, 50 flawed democracies and 130 extractive, elitist autocracies. Flawed democracies and autocracies that already struggle to produce goods necessary for their own citizens to flourish, are simply incapable of committing to international arrangements that address the existential threats posed by the decalogue of wicked problems. This then is our children's inheritance: Dystopias far,

far worse than the polities that we ourselves have known. What, if anything, can mitigate the harms that are our legacy? Wrecking Ball offers, as an answer, a ground-breaking analysis of South Africa's political economy. It demonstrates that this country's elitist and extractive political and economic institutions not only make resolution of ongoing domestic crises unattainable, likewise, they make meaningful responses to wicked problems impossible. Smart people think they have all the answers. Without laboring under any such illusions, Martin Luther King Jr eloquently opined: 'The arc of the moral universe is long, but it bends towards justice.' But what will happen, King would acidly ask, if we continue to dawdle, and simply run out of time? Wrecking Ball similalry operates under no such 'smart' pretenses, and undeterred and unmatched ventures into terrrains traversed by truly great political economists: Smith, Ricardo, Marx and Keynes. By knitting together what we all know to be the facts, with cutting edge theory in economics, sociology, history and political science, the book paints an unflinching portrait of where we are, and where we are headed. Are we ready to be honest with ourselves about the likely future of this overheated, overpopulated planet?
