Affective Health and Masculinities in South Africa Hans Reihling, 2020-04-03 Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men's struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social

assemblages, the study shows how affective health problems are tied to modern individualism rather than African 'tradition' that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men's vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.

Douglas Weaver, Rady Roldán-Figueroa, 2017 Exploring Christian Heritage provides students and teachers with a rich and substantial introduction to the texts that have shaped the Christian faith. Including works by Augustine, Aquinas, Martin Luther, John Wesley, John Calvin, and Karl Barth, among others, this collection also highlights essential movements--from the second to the twenty-first centuries--often glossed over in primary source readers. From Pentecostalism and Baptists to feminism and religious liberty movements, Exploring Christian Heritage succinctly joins together the most influential voices of Christian history and theology with those that have been forgotten and sometimes ignored. Now in its second edition, voices ancient and modern have been added to deepen and widen the story of Christianity in varied forms. Exploring Christian Heritage, second edition also contains additional classroom resources, including new textual introductions and over ninety new quizzes.

Programming and Problem Solving with C++ Nell B. Dale, Chip Weems, Mark R. Headington, 1997 In the tradition of Pascal and Turbo Pascal, authors Nell Dale and Chip Weems have teamed up with Mark Headington to offer Programming and Problem Solving with C++ for students in the CS1/C101 course. The second half builds on this foundation and explains ADTs, the C++ class, encapsulation, information hiding, and object-oriented software development.

Writing Systems Geoffrey Sampson, 1985 To say that writing has as much claim as speech to be treated as language may strike the reader as a statement of the obvious. But the fact is that, although the tide is beginning

to turn now, for most of the twentieth century linguistics has almost wholly ignored writing. It is not necessary to accept all the theories of the French critic Jacques Derrida in order to agree with him when he describes writing as the wandering outcast of linguistics. This book is offered in the belief that written language is a form of language. As such, it deserves to be treated with the methods of modern, scientific linguistic study, which have been increasing our understanding of the spoken form of language for many decades.

Electronic Textual Editing Lou Burnard, Katherine O'Brien O'Keeffe, John Unsworth, 2006 The long history of textual editing and scholarship has been intimately involved with the physique of the book, which set limits on the presentation and study of text. Increasingly, since the 1980s, the written word has taken on a digital form, and the shift from codex to computer, from print to electronic media, creates new opportunities - and new difficulties. This volume offers an emerging consensus about the fundamental issues of electronic textual editing. It provides practical advice and faces theoretical questions. Its twenty-four essays deal with markup coding and procedures, electronic archive administration, use of standards (such as Unicode), rights and permissions, and the changing and challenging environment of the Internet. Some of the specific texts discussed are Greek and Latin inscriptions, the Gospel of John, the Canterbury Tales, William Blake's poems and art, Percy Bysshe Shelley's *The Devil's Walk*, Stijn Streuvels's *De teleurgang van den Waterhoek*, Ludwig Wittgenstein's *Nachlass*, and the papers of Thomas Edison. The guidelines of the MLA's Committee on Scholarly Editions, recently revised to address electronic editions, are included in full. The CD accompanying this volume contains the complete text of the Text Encoding

Initiative guidelines (P4 edition) in both HTML and PDF formats.
