The Chemical Components of Tobacco and Tobacco Smoke, Second Edition Alan Rodgman, Thomas A. Perfetti, 2013-02-25 Authored by two longtime researchers in tobacco science, The Chemical Components of Tobacco and Tobacco Smoke, Second Edition chronicles the progress made from late 2008 through 2011 by scientists in the field of tobacco science. The book examines the isolation and characterization of each component. It explores developments in pertinent analytical technology and results of experimental studies on biological activity, toxicity, and tumorigenicity, including the inhibition of adverse biological activity of one specific tobacco smoke

component by another tobacco smoke component. Adding to the progress reported in the First Edition, the comprehensive Second Edition provides nearly 7,000 references on almost 9,600 components. The authors discuss the controversies over the extrapolation of the biological effect of a specific component administered individually by one route versus its biological effect when the component is in a highly complex mixture and is administered by a different route. They also cite studies in which cigarette design technologies were developed to control the per-cigarette mainstream smoke yield of Federal Trade Commission-defined tar and one or more specific tobacco smoke components of concern. New in the Second Edition: Approximately 1,000 newly reported components have been inserted and several dozen duplicates have been deleted from various tables and from the Alphabetical Index Improved and sharper chemical structures Insertion of new pertinent references for the components in each of the major chapter tables devoted to a particular functional component Updated Index organized by the CAS Registry Number listing of the components Updated discussions in the Introduction and at the beginning of each chapter A searchable companion CD-ROM containing the 350-page alphabetical Component Index Authors Alan Rodgman and Thomas A. Perfetti were jointly awarded the 2010 CORESTA (Cooperative Centre for Scientific Research Relative to Tobacco) Prize for their extensive work on documenting the vast literature on the chemical composition of tobacco and tobacco smoke in their original edition.
