*Care of the Critically Ill Patient* Jack Tinker,Warren M. Zapol,2012-12-06 Nine years have passed

since the first edition of *Care of the Critically Ill Patient* was published. As its editors Maurice Rapin and I were fortified by the many positive and helpful comments of reviewers and readers: the work appeared to have fulfilled our original aims and objectives. Intensive care medicine has, of course, advanced and changed in many ways since 1982 and it therefore seemed appropriate to consider the preparation of a second edition. Encouraged by the reception of the first and the timely prompting of the publishers we began, in 1986, to prepare for a new edition. Caring for critically ill patients is of universal concern and we were therefore delighted when Warren Zapol joined us as C'n editor widening our international base. The three of us subsequently spent many happy and productive times together planning the content, priorities, scale and contributions for the new edition. A great tragedy then overcame us: Maurice Rapin died suddenly. His death deprived us of a true friend and colleague who had been an international pioneer during the development of intensive care medicine. I will always remember, with affection and professional pride, the many hours he and I worked together in preparing the first edition of this book and also as founding editors of the now firmly established journal *Intensive Care Medicine*. An obituary, written by Warren Zapol, that appeared in the journal follows the Preface.

Successful Drug Discovery János Fischer, Christian Klein, Wayne E. Childers, 2018-04-16 With its

focus on drugs so recently introduced that they have yet to be found in any other textbooks or general references, the information and insight found here makes this a genuinely unique handbook and reference. Following the successful approach of the previous volumes in the series, inventors and primary developers of successful drugs from both industry and academia tell the story of the drug's discovery and describe the sometimes twisted route from the first drug candidate molecule to the final marketed drug. The 11 case studies selected describe recent drugs ranging across many therapeutic fields and provide a representative cross-section of present-day drug developments. Backed by plenty of data and chemical information, the insight and experience of today's top drug creators makes this one of the most useful training manuals that a junior medicinal chemist may hope to find. The International Union of Pure and Applied Chemistry has endorsed and sponsored this project because of its high educational merit.
