For the Record National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Commission on Physical Sciences, Mathematics, and Applications, Committee on Maintaining Privacy and Security in Health Care Applications of the National Information Infrastructure, 1997-07-09 When you visit the doctor, information about you may be recorded in an office computer. Your tests may be sent to a laboratory or consulting physician. Relevant information may be transmitted to your health insurer or pharmacy. Your data may be collected by the state government or by an organization that accredits health care or studies medical costs. By making information more readily available to those who need it, greater use of computerized health information can help improve the quality of health care and reduce its costs. Yet health care organizations must find ways to ensure that electronic health information is not improperly divulged. Patient privacy has been an issue since the oath of Hippocrates first called on physicians to keep silence on patient matters, and with highly sensitive data—genetic information, HIV test results, psychiatric records—entering patient records, concerns over privacy and security are growing. For the Record responds to the health care industry's need for greater guidance in protecting health information that increasingly flows

through the national information infrastructure—from patient to provider, payer, analyst, employer, government agency, medical product manufacturer, and beyond. This book makes practical detailed recommendations for technical and organizational solutions and national-level initiatives. For the Record describes two major types of privacy and security concerns that stem from the availability of health information in electronic form: the increased potential for inappropriate release of information held by individual organizations (whether by those with access to computerized records or those who break into them) and systemic concerns derived from open and widespread sharing of data among various parties. The committee reports on the technological and organizational aspects of security management, including basic principles of security; the effectiveness of technologies for user authentication, access control, and encryption; obstacles and incentives in the adoption of new technologies; and mechanisms for training, monitoring, and enforcement. For the Record reviews the growing interest in electronic medical records; the increasing value of health information to providers, payers, researchers, and administrators; and the current legal and regulatory environment for protecting health data. This information is of immediate interest to policymakers, health policy researchers, patient advocates, professionals in health data management, and other stakeholders.

Gebir Walter Savage Landor, 2014-11-05 [...] became afterwards Landor's lifelong friend. When Shelley was at Oxford in 1811, there were times when he would read nothing but Gebir. His friend Hogg says that when he went to Shelley's rooms one morning to tell him something of importance, he could not draw his attention away from Gebir. Hogg impatiently threw the book out of

window. It was brought back by a servant, and Shelley immediately fastened upon it again. At the close of 1805 Landor's father died, and the young poet became a man of property. In 1808 Southey and Landor first met. Their friendship remained unbroken. When Spain rose to throw off the yoke of Napoleon, Landor's enthusiasm carried him to Corunna, where he paid for the equipment of a thousand volunteers, and joined the Spanish army of the North. After the Convention of Cintra he returned to England. Then he bought a large Welsh estate-Llanthony Priory-paid for it by selling other property, and began costly improvements. But he lived chiefly at Bath, where he married, in 1811, when his age was thirty-six, a girl of twenty. It was then that he began his tragedy of Count Julian. The patriotic struggle in Spain commended at the same time to Scott, Southey, and Landor the story of Roderick, the last of the Gothic kings, against whom, to avenge wrong done to his daughter, Count Julian called the[...].

Logic Design and Verification Using SystemVerilog (Revised) Donald Thomas, 2016-03-01 SystemVerilog is a Hardware Description Language that enables designers to work at the higher levels of logic design abstractions

that match the increased complexity of current day integrated circuit and field-programmable gate array (FPGA) designs. The majority of the book assumes a basic background in logic design and software programming concepts. It is directed at: * students currently in an introductory logic design course that also teaches SystemVerilog, * designers who want to update their skills from Verilog or VHDL, and * students in VLSI design and advanced logic design courses that include verification as well as design topics. The book starts with a tutorial introduction on hardware description languages and simulation. It proceeds to the register-transfer design topics of combinational and finite state machine (FSM) design - these mirror the topics of introductory logic design courses. The book covers the design of FSM-datapath designs and their interfaces, including SystemVerilog interfaces. Then it covers the more advanced topics of writing testbenches including using assertions and functional coverage. A comprehensive index provides easy access to the book's topics. The goal of the book is to introduce the broad spectrum of features in the language in a way that complements introductory and advanced logic design and verification courses, and then provides a basis for further learning. Solutions to problems at the end of chapters, and text copies of the SystemVerilog examples are available from the author as described in the Preface.
