The Boost C++ Libraries Boris Schäling, The second edition of The Boost C++ Libraries introduces 72 Boost libraries that provide a wide range of useful capabilities. They help you manage memory and process strings more easily. They provide containers and other data structures that go well beyond what the standard library offers. They make it easy to build platform-independent network applications. Simply put, these 72 libraries greatly expand your C++ toolbox. The second edition contains more than 430 examples. All examples are as short as possible, but they are complete, so you can compile and run them as is. They show you what the Boost libraries offer and give you a head start on using the libraries in your own applications. The goal of this book is to increase your efficiency as a C++ developer and to simplify software development with C++. The Boost libraries introduced in this book will help you write less code with fewer bugs and finish projects faster. You code will be more concise and self-explanatory and more easily adapted when requirements change. The second edition is based on the Boost libraries 1.55.0 and 1.56.0 with the latter version having been released in August 2014. The examples are based on C++11 and have been tested with Visual Studio 2013, GCC 4.8 and Clang 3.3 on various platforms. For Boost libraries which were incorporated into the C++11 standard library, differences between Boost and the standard library are highlighted. The Boost libraries are one of the most important and influential open source C++ libraries. Their source code is available under a permissive free software license. Several Boost libraries have been incorporated into the C++11 standard library. The Boost libraries are developed and supported by the Boost community - a worldwide developer community with a strong interest in pushing C++ boundaries further.

The first half of the book focuses on basic programming interfaces including generic containers and algorithms, strings, resource management, exception safety, and a miscellany of programming utilities that make everyday programming chores easy. Following a short interlude that introduces template metaprogramming and functional programming, the later chapters are devoted to systems programming interfaces, focusing on directory handling, I/O, concurrency, and network programming

Introduction to the Boost C++ Libraries Robert Demming,Daniel J.. Duffy,2010-11-01 C++ is one of the most important and influential programming languages for application development. It supports the modular, object- oriented and generic programming models and its flexibility has been one of the main reasons why it has been so successful. With the emergence of the Boost Libraries (www.boost.org) we see that C++ is brought to a new level, namely a set of reusable and modular template libraries that C++ developers can use in their applications. This book is dedicated to a number of Boost libraries for higher-order functions, data types and data structures, libraries for text and string processing, multi-threading, random number generation and more. We also discuss how Boost and design patterns are used to promote the flexibility of code. Each library is described in a step-by-step manner. Numerous examples are given to show the functionality of each library. The full source code is freely available to purchasers of the book. Coverage Includes Understanding and using 30 major Boost libraries. Learn about higher-order functions, data structures, memory management, multi-threading and more. Using Boost in new and existing applications. Integrating Boost and the Gang-Of-Four design patterns. Ready-to-run projects for Visual Studio. Appendices and exercises.

Signal Boost Alyssa Cole,2019-08-12 “This trilogy gets better with each book.” — Library Journal “Cole’s Off the Grid series succeeds because it captures the unsettling details of its dystopian setting beautifully, but also because its main characters are so very human and relatable.” —RT Book Reviews When technology stopped working, the world as they knew it ended. In a secluded cabin, John and his loved ones have survived. He should feel grateful. But his family is in his face 24/7, he has to watch his best friend, Arden, and brother, Gabriel, flaunt their love, and as a techie in a Luddite world he’s pretty much useless. The cabin is brimming with people, but he feels utterly alone. Until he catches Mr. Tall, Blond and Gorgeous raiding their garden. Mykhail is an astrophysics student, he makes John’s gaydar ping like crazy and he thinks he knows what caused the devastation. He’s on a journey to his university to find answers, and John invites himself along. Partly to get out of the house, and partly because he can’t let Mykhail go without acting on the mutual attraction that’s so obvious even John’s mom is playing matchmaker. The closer they get to campus, the more Mykhail lets down his walls. But with answers come secrets both devastating and deadly, and before they can save the world, they’ll have to save themselves. This book is approximately 69,000 words And don’t miss the rest of the Off the Grid series: Radio Silence and Mixed Signals are available now! Originally published in 2015

Innovative Instruments for Community Development in Communication and Education Gheorghe Clitan, Maria Micle, 2021-12-31 The multiple facets of this volume belong to five large themes. The first theme, that of persuasion and manipulation, is studied here through electoral campaigns (i.e., mental filters used in voting manipulation, the mechanisms of vote mobilisation, manipulation and storytelling models). The institutionalization of education represents the second theme, approached here through specific interdisciplinary instruments: the intersection of higher education with public learning, the answers of the knowledge society to the issues of contemporary work problems, the institutional relationships used to solve educational problems specific to childhood and adolescence, as well as the role of media competencies in professional development. The third theme is related to the inheritance and transmission of cultural identity, instrumentalized through issues such as: the duty of intergenerational justice with regard to cultural heritage, education and vocational training in library science, the social inclusion role of public and digital libraries. The collective and cultural identity of communities represents the fourth large theme, being approached through a triple perspective: the philosophical background of restoring the political dignity of communities, the communication space as a point of a needle towards the community space, and the communicational issue of the European capital of culture programmes. Lastly, the fifth theme belongs to practical and applied philosophy, specifically philosophical counselling, debating issues such as: the identification of the communicational background for this type of counselling, the secular approach to the problem of evil from a philosophical counselling perspective, the discussion of Platon's attitude towards suicide and of frank speech in the Epicurean school, the socio-anthropological perspective of immortality, as well as the formal approach of the relationship between real and imaginary.
