The Long War - Insurgency, Counterinsurgency and Collapsing States Mark T. Berger, Douglas A. Borer, 2013-09-13 The rise and fall of the Cold War coincided with the universalization and consolidation of the modern nation-state as the key unit of the wider international system. A key characteristic of the post-Cold War era, in which the US has emerged as the sole superpower, is the growing number of collapsing or collapsed states. A growing number of states are, or have become, mired in conflict or civil war, the antecedents of which are often to be found in the late-colonial and Cold War era. At the same time, US foreign policy (and the actions of other organizations such as the United Nations) may well be compounding state failure in the context of the post-9/11 Global War on Terror (GWOT) or what is also increasingly referred to as the 'Long War'. The Long War is often represented as a 'new' era in warfare and geopolitics. This book acknowledges that the Long War is new in important respects, but it also emphasizes that the Long War bears many similarities to the Cold War. A key similarity is the way in which insurgency and counterinsurgency were and continue to be seen primarily in the context of inter-state rivalry in which the critical local or regional dynamics of revolution and counter-revolution are marginalized or neglected. In this context American policy-makers and their allies have again erroneously applied a 'grand strategy' that

suits the imperatives of conventional military and geo-political thinking rather than engaging with what are a much more variegated array of problems facing the changing global order. This book provides a collection of well-integrated studies that shed light on the history and future of insurgency, counterinsurgency and collapsing states in the context of the Long War. This book was previously published as a special issue of Third World Quarterly.

Deep Inelastic Scattering Robin Devenish, Amanda Cooper-Sarkar, 2011-04-28 This book provides an up-to-date, self-contained account of deep inelastic scattering in high-energy physics, intended for graduate students and physicists new to the subject. It covers the classic results which led to the quark-parton model of hadrons and the establishment of quantum chromodynamics as the theory of the strong nuclear force, in addition to new vistas in the subject opened up by the electron-proton collider HERA. The extraction of parton momentum distribution functions, a key input for physics at hadron colliders such as the Tevatron at Fermi Lab and the Large Hadron Collider at CERN, is described in detail. The challenges of the HERA data at 'low x' are described and possible explanations in terms of gluon dynamics and other models outlined. Other chapters cover: jet production at large momentum transfer and the determination of the strong coupling constant, electroweak interactions at very high momentum transfers, the extension of deep inelastic techniques to include hadronic probes, a summary of fully polarised inelastic scattering and the spin structure of the nucleon, and finally a brief account of methods in searching for signals 'beyond the standard model'.
