Mind the Gap Deirdre Curtin, 2004 Based on a lecture delivered by the author at the Leuven Centre for a Common Law of Europe, this book demonstrates the need to mind the gap between the evolving EU executive and the constitution. Mind the Gap focuses on the more low level politics of the EU by analyzing how the EU has evolved in institutional practice over the past decade. The manner in which powers and tasks have been delegated to a whole series of non-majoritarian agencies are a striking illustration of the development in practice of institutional structures without a legal basis in the constituent treaties or in the constitution. As the EU is doing away with its divisive pillars, the time has come to lift the veil on the agencies and approach them in a horizontal fashion and embrace them fully within the evolving constitutional framework.

Between Governing and Governance Poul F Kjaer, 2010-02-05 This book explains the emergence and functioning of three forms of governance structures within the context of the European integration and constitutionalisation process: comitology, (regulatory) agencies and the Open Method of Co-ordination. The point of departure is the insight that the intergovernmental/supranational distinction, which most theories of European integration and constitutionalisation rely on, has lost its strength. A new paradigm of EU research is therefore needed. Against this background it is suggested that the distinction between governing and governance provides a more appropriate basis for analysing the phenomenon of integration and constitutionalisation in Europe. The distinction between governing and governance allows for an understanding of the EU as a hybrid consisting of a governing dimension,

characterised by legal and organisational hierarchy, and a governance dimension which operates within a network form characterised by legal and organisational heterarchy. The function of governance structures is to ensure the embeddedness of the governing dimension in the wider society. Instead of representing contradictory developments, the two dimensions are therefore mutually constitutive in the sense that more governing implies more governance and vice versa. These theoretical insights are illustrated through two detailed case studies which respectively reconstruct the operational mode of the Open Method of Coordination within EU Research & Development Policy and the regulatory system for the EU chemicals market (REACH). The book is inter-disciplinary in nature and incorporates insights from law, political science and sociology.

EU Administrative Law Paul Craig, 2012-03-22 The second edition of EU Administrative Law provides comprehensive coverage of the administrative system in the EU and the principles of judicial review that apply in this area. The chapters in the first half of the book deal with all the principal variants of the EU administrative regime. Thus there are chapters dealing with the history and taxonomy of the EU administrative regime; direct administration; shared administration; Comitology; agencies; social partners and the open method of coordination. The coverage throughout focuses on the legal regime that governs the particular form of administration and broader issues of accountability, drawing on literature from political science as well as law. The focus in the second part of the book shifts to the principles of judicial review. There are detailed chapters covering all principles of judicial review and the discussion of the law throughout is analytical and contextual. The discussion in this part of the book begins with a chapter that considers the principles that have informed the development of EU judicial review. This is followed by a chapter dealing with the judicial system and the way in which reform could impact on the subject matter of the book. There are then chapters dealing with competence; access; transparency; process; law, fact and discretion; rights; equality; legitimate expectations; two chapters on proportionality; the precautionary principle; two chapters on remedies; and the ombudsman. The book paints a comprehensive picture of administrative law as it exists in the EU today.

Miracles J. Harold Ellens, 2008-07-30 Can science, psychology, and biology explain miracles? This three-volume set attempts to answer that question, presenting the latest, as well as classic, thinking and research regarding miracles from fields that include psychology, psychiatry, theology, biology, and history. We have all heard of

what seem miraculous events, which have surfaced across history. They range from stigmata and bleeding icons to deadly tumors that disappear and healers who succeed just by laying hands on the afflicted; from people who can predict unexpected events to so-called mediums and those who can allegedly see and speak with the dead. These books, led by an eminent scholar who serves as series editor for the Praeger series Psychology, Religion, and Spirituality, examine miracles of body, mind, and spirit, presenting the most recent research and writing on these uncommon events, aiming to bring hard science to some of the most persistent and peculiar phenomena associated with the human race. Can science, psychology, and biology explain miracles? This three-volume set attempts to answer that question, presenting the latest, as well as classic, thinking and research regarding miracles from fields that include psychology, psychiatry, theology, biology, and history. From news of a crippled woman who left her wheelchair and walked after an evangelist prayed over her, to stories of people who died on the operating table only to be revived to tell of bright lights and the pathway to the afterlife, we've all heard of what seem miraculous events. They have surfaced across history. They range from stigmata and bleeding icons to deadly tumors that disappear, and healers who succeed just by laying hands on the afflicted; from people who can predict unexpected events to so-called mediums and those who can allegedly see and speak with the dead. Some miracles are intricately tied to religious beliefs, but there are millions of people who ascribe to no particular religion, yet still believe that things happen that defy all laws of nature, and thus defy scientific explanation. In these books, eminent scholar J. Harold Ellens and his team of expert contributors examine miracles of body, mind, and spirit, presenting the most recent research and writing on these uncommon events as they aim to bring hard science to some of the most persistent—and peculiar—phenomena associated with the human race.
