*Jagdgeschwader 400* Stephen Ransom, Hans-Hermann Cammann, 2010-12-21 The Jagdgeschwader 400 group was formed for the sole purpose of flying one of the world's most revolutionary aircraft - the rocket-powered Me 163. Although the Me 163 scored relatively few kills, giving it a success rate much lower than the Me 262, it still had a massive psychological impact upon the Allies, and the technology and experiences gained in the Me 163 went on to influence the jet fighters of modern times. The introduction of jet-powered aircraft demanded massive changes in training, equipment, servicing and tactics, all of which are described and examined in this essential analysis of the story of the Me 163 in frontline service with Erprobungskommando 16 and Jagdgeschwader 400.

Insect and Hydroponic Farming in Africa Dorte Verner, Nanna Roos, Afton

Halloran, Glenn Surabian, Maximillian Ashwill, Saleema Vellani, Yasuo Konishi, 2021-12-16 Interestingly, some relief from today's woes may come from ancient human practices. While current agri-food production models rely on abundant supplies of water, energy, and arable land and generate significant greenhouse gas emissions in addition to forest and biodiversity loss, past practices point toward more affordable and sustainable paths. Different forms of insect farming and soilless crop farming, or hydroponics, have existed for centuries. In this report the authors make a persuasive case that frontier agriculture, particularly insect and hydroponic farming, can complement conventional agriculture. Both technologies reuse society's agricultural and organic industrial waste to produce nutritious food and animal feed without continuing to deplete the planet's land and water resources, thereby converting the world's wasteful linear food economy into a sustainable, circular food economy. As the report shows, insect and hydroponic farming can create jobs, diversify livelihoods, improve nutrition, and provide many other benefits in African and fragile, conflict-affected countries. Together with other investments in climate-smart agriculture, such as trees on farms, alternate wetting and drying rice systems, conservation agriculture, and sustainable livestock, these technologies are part of a promising menu of solutions that can help countries move their land, food, water, and agriculture systems toward greater sustainability and reduced emissions. This is a key consideration as the World Bank renews its commitment to support countries' climate action plans. This book is the Bank's first attempt to look at insect and hydroponic farming as possible solutions to the world's climate and food and nutrition security crisis and may represent a new chapter in the Bank's evolving efforts to help feed and sustain the planet.

*The Rhetoric of Reaction* Albert O. Hirschman, 1991-03 Hirschman maps the diffuse and treacherous world of reactionary rhetoric in which conservative public figures, thinkers, and polemicists have been arguing against progressive agendas and reforms for 200 years. Ultimately, he shows that progressives are apt to employ related rhetorical postures, which are as biased as their reactionary counterparts.

**Vicious** Jon T. Coleman,2008-10-01 Over a continent and three centuries, American livestock owners destroyed wolves to protect the beasts that supplied them with food, clothing, mobility, and wealth. The brutality of the campaign soon exceeded wolves’ misdeeds. Wolves menaced property, not people, but storytellers often depicted the animals as ravenous threats to human safety. Subjects of nightmares and legends, wolves fell prey not only to Americans’ thirst for land and resources but also to their deeper anxieties about the untamed frontier. Now Americans study and protect wolves and jail hunters who shoot them without authorization. Wolves have become the poster beasts of the great American wilderness, and the federal government has paid millions of dollars to reintroduce them to scenic habitats like Yellowstone National Park. Why did Americans hate wolves for centuries? And, given the ferocity of this loathing, why are Americans now so protective of the animals? In this ambitious history of wolves in America—and of the humans who have hated and then loved them—Jon Coleman investigates a fraught relationship between two species and uncovers striking similarities, deadly differences, and, all too frequently, tragic misunderstanding.
