**Bubbles in Food 2** Grant Campbell,2016-06-11 Bubbles give novelty and distinctiveness to many food and drink products including the most important and interesting ones such as bread, beer, ice cream, whipped cream, soufflés and champagne. Understanding the creation and control of bubbles in food products is key to the success of the domestic chef or the industrial food manufacturer. This new volume presents the proceedings of the conference Bubbles in Food 2: Novelty, Health and Luxury. This book is fully updated and expanded from the original Bubbles in Food book published in 1999. This new title brings together up-to-date information on the latest developments in this fast moving area. Bubbles in Food 2 includes novel experimental techniques for measuring and quantifying the aerated structure of foods (e.g. ultrasonics, MRI imaging, X-ray tomography, microscopy, rheology, image analysis), and novel analytical approaches for interpreting aerated food properties and behavior. These techniques and approaches provide stimulus for new product development or for enhancing the understanding of the manufacture of existing products, leading to enhanced quality and greater product differentiation. Bubbles in Food 2: Novelty, Health and Luxury aims to enhance the appreciation of aerated foods and to provide stimulation and cross fertilisation of ideas for the exploitation of bubbles as a novel and versatile food ingredient.

**Ultrasonic Acoustic Characteristics of Air Bubbles in the Surf Zone** Trevor A. McIntyre,1995 Understanding the movement of sediment in the nearshore region due to wave motion and longshore currents is important in beach erosion studies, and has tactical significance in beach front mine warfare. In the surf zone, an bubbles and sediment are both suspended within the water column. At the Naval Postgraduate School in Monterey, California, a sediment flux probe has been developed to study small scale processes. Using ultrasonic acoustic backscatter, the Coherent Acoustic Sediment Flux Probe (CASP) is capable of tracking the movement of scatterers within the surf zone. As it is important that the CASP system is capable of distinguishing between sediment and entrained air bubbles, laboratory experiments were run to determine the ultrasonic acoustic backscatter characteristics of surf zone bubbles. Bulk void fraction and optical sizing methods were explored to develop a means of measuring bubble populations produced in the laboratory for calibration of the backscattered energy received by the CASP system in the presence of bubbles.

Kill Everyone Lee Nelson,Tysen Streib,Steven Heston,2009-07-15 One of the most highly regarded poker books to come out in the last decade is now even better than before. The expanded and

revised second edition of *Kill Everyone*, by Aussie Millions champ Lee Nelson (with Steve Heston and Tyson Streib), now includes hand illustrations throughout the book—and even more enticing for poker players—commentary throughout the book by internet-poker and European playing sensation Bertrand Elky Gropellier, World Poker Tour’s 2009 Poker Player of the Year. *Kill Everyone* begins where *Kill Phil* left off. Its perfect blend of real-time experience, poker math, and computational horsepower combine to create new concepts and advanced strategies never before seen in print for multi-table tournaments, Sit-n-Gos, and satellites. It also explains how to choose the right strategy for the right game, provides the proper tactics, and introduces new weapons into a tournament-poker-player’s arsenal. This book is for anyone serious about playing tournament poker, both live and online. And for cash-game players, a bonus chapter, penned by online cash-game ace and 2007 WSOP bracelet winner Mark Vos, helps you develop your short-handed no-limit hold ’em cash game.

**Bubble Dynamics and Interface Phenomena** John R. Blake, Jeremy M. Boulton-Stone, Neale H. Thomas, 2012-12-06 This volume contains papers presented at the IUTAM Symposium on Bubble Dynamics and Interface Phenomena held at the University of Birmingham from 6-9 September 1993. In many respects it follows on a decade later from the very successful IUTAM Symposium held at CALTECH in June 1981 on the Mechanics and physics of bubbles in liquids which was organised by the late Milton Plesset and Leen van Wijngaarden. The intervening period has seen major development with both experiment and theory. On the experimental side there have been advances with very high speed photography and data recording that provide detailed information on fluid and interface motion. Major developments in both computer hardware and software have also led to extensive improvement in our understanding of bubble and interface dynamics although development is still limited by the sheer complexity of the laminar and turbulent flow regimes often associated with bubbly flows. The symposium attracts wide and extensive interest from engineers, physical, chemical, biological and medical scientists and applied mathematicians. The scientific committee sought to achieve a balance between theory and experiment over a range of fields in bubble dynamics and interface phenomena. It was our intention to emphasise both the breadth and recent developments in these various fields and to encourage cross-fertilisation of ideas on both experimental techniques and theoretical developments. The programme, and the proceedings recorded herein, cover bubble dynamics, sound and wave propagation, bubbles in flow, sonoluminescence, acoustic cavitation, underwater explosions, bursting bubbles and ESWL.

**The Digital NBA** Steven Secular, 2023-06-20 The National Basketball Association reaches a global audience via a multiplatform strategy that leverages its uncanny ability to connect fans to all things NBA. Steven Secular brings readers inside the league’s global operations and traces the history of the NBA’s approach to sports media from its 1980s embrace of cable through the streaming revolution of the twenty-first century. As fans around the world stream games and other league content, NBA teams incorporate foreign languages and cultures into broadcasts to boost their product’s appeal to audiences in Brazil, China, and beyond. Secular’s analysis reveals how the NBA continues to transform itself into a wildly successful media producer and distributor more akin to a streaming studio than the sports leagues of old even as its media partners and sponsors erase any notion of sports as a civic good. A timely look at a dynamic media landscape, *The Digital NBA* shows how the games we love became content first and sport a distant second.

**Magnetic Bubble Technology** A. H. Eschenfelder, 2012-12-06 The popularity of the First Edition of this book has been very gratifying. It confirms that there is a genuine need for a text covering the magnetic bubble technology. We are pleased that the readers have found that this book satisfies that need. It has been used as a text for courses in both universities and industry, and as a reference manual by workers active in the field. To meet the need for more copies of the book it seemed preferable to publish a second edition rather than merely a second printing. There has been some significant progress, even in the short time since the initial printing, and we wanted to include that. At the same time we would like to provide the new copies at the lowest possible cost so that they are more easily obtained by students. For this reason the new edition is in soft cover and the recent progress has been described in a final chapter rather than incorporated into the original chapters. This eliminates the expense of resetting and repaging the original text. At the same time up-to-date references have been added and typographical errors have been corrected in the original chapters. It is our hope that this edition will be useful to those with an interest in the fascinating field of magnetic bubbles.

**Bubble** Anders de la Motte, 2013-12-10 The thrilling conclusion to the Game Trilogy finds HP living off the grid, convinced he is being hunted by both the police and the masterminds behind the Game, with no one to trust and the boundaries between reality and the virtual worlds dangerously blurred. He resolves to complete one final mission in order to expose the Game and uncover the truth behind it. Ousted from the police force, Rebecca is in crisis, selfmedicating to cope with stress. When she finds a safe-deposit box that belonged to her father, she is shocked to find that it contains a gun and several passports. She starts her own search for the truth: what is the connection between her father’s past, the Game and what is happening to HP? **From the Outer Heliosphere to the Local Bubble** J.L. Linsky, V.V. Izmodenov, E. Mobius, Rudolf von Steiger, 2009-04-29 Knowledge about the outer heliosphere and the interstellar medium, which were long treated as two separate fields, has improved dramatically over the past 25 years as a consequence of recent developments: The discovery of interstellar pickup ions and neutral helium inside the heliosphere, the determination of the interstellar hydrogen distribution in the heliosphere obtained using backscattered solar Lyman-alpha radiation, the prediction and subsequent detection of the hydrogen wall just outside of the heliopause, the development of detailed global models for the interaction of solar wind plasma with the interstellar medium, and most recently, direct in-situ plasma and field measurements inside of the heliosheath. At the same time, our understanding of the nearby galactic environment, including the composition and dynamics of the warm gas clouds and hot gas in the local bubble, has benefited greatly from absorption-line spectroscopy using nearby stars as background sources and dynamic modeling. The present volume provides a synopsis of these developments organised into seven sections: Dominant physical processes in the termination shock and heliosheath, three-dimensional shape and structure of the dynamic heliosphere, relation of the plasmas and dust inside and outside of the heliosphere, origin and properties of the very local interstellar medium, energy and pressure equilibria in the local bubble, physical processes in the multiphase interstellar medium inside of the local bubble, and the roles that magnetic fields play in the outer heliosphere and the local bubble. The last theme is probably the most basic of all as magnetic fields play important roles in most of the phenomena discussed here. The volume concludes with four papers providing the big picture by looking at the time evolution of

both the heliosphere and the local bubble, looking beyond the local bubble, and finally addressing the challenges in modeling the interface between the two media.
