Microsculpture Levon Biss, 2017-10-10 You will never look at a beetle or a moth the same way again. --WIRED Art meets science to dazzling effect. --The Guardian Microsculpture is a unique photographic study of insects in mind-blowing magnification that celebrates the wonders of nature and science. Levon Biss's photographs capture in breathtaking detail the beauty of the insect world and are printed in large-scale format to provide an unforgettable viewing experience. Each picture in Microsculpture is created from approximately 8,000 individual photographs. Segments of the specimen are lit and photographed separately using microscope lenses, then "stacked" to maintain sharp focus throughout. These images are then combined to create a single high-resolution file. From start to finish, each portrait takes approximately 4 weeks to create. The project has captured the attention of the world with features in WIRED and New Scientist. Microsculpture has been exhibited at the Oxford University Museum of Natural History and the Xposure 2016 International Photography Festival in Sharjah, U.A.E. It has been viewed by over half a million people so far and will be touring museums around the world from 2017 onward. The entomology collection has significant cultural and historical value, containing the world's oldest pinned insect specimen and many thousands of insects collected by pioneering Victorian explorers and biologists such as Charles Darwin and Alfred Russell Wallace.

Bugs in Close-up Colin Hutton, 2015-02 Bugs in Close-Up is a collection of over 200 stunning images of some of nature's most intriguing and bizarre-looking creatures. Using his macro lens to transport viewers into the tiny world of insects and spiders, Colin Hutton creates surprisingly expressive portraits of these strange and lovely animals that are often feared or overlooked. Macro photography brings the world of bugs to life! These creatures are all around us, yet too diminutive to be observed by the human eye. The extreme photographic close-ups illustrate a hidden fauna of alien-looking critters from around the world. Bugs in Close-Up includes assassin bugs, rhinoceros beetles, insect swarms and societies (army ants, bees and so on), inter-species relationships (ants 'farming' caterpillars), and giants of the bug world (beetles, stick insects and the like). The incredible photography is supported by informative, extended captions detailing the subjects and, in some cases, how the images were taken. The book also includes tips and practical insights for aspiring macro photographers and bug-hunting enthusiasts.
