Online-Marketing Julia Erbe,2000-01-03 Inhaltsangabe:Abstract: In the 1990s, people are being more and more confronted with the rapid developments in the information and communication technology sector. Computers seem to be indispensable not only in professional areas of life, but also in educational and private contexts. The Internet, which started as a small network of students, academics, and researchers, has developed into a global network, linking millions of people in countries all over the world. This enormous increase in information flow which is facilitated by Internet services, such as the World Wide Web (WWW), electronic mail (e-mail) or Usenet news appears to have an influence on communication processes and on the way in which we use language. The fact that the new media are becoming more and more popular has also been realised by marketing specialists. Due to the large number of users and the enormous growth potential of the Internet, the sector of electronic commerce is booming. The formerly anti-commercial values of the original Internet community seem to have drastically changed. Today, electronic commerce is a rapidly growing area, and numerous companies are beginning to position themselves on the information superhighway in terms of providing hardware, software, information content or services. Because of the fact that the Internet presents a fundamentally different environment for marketing activities than traditional media, conventional marketing communications need to be transformed in order to meet the requirements of such an information-intensive medium. On the Internet, the search for and the acquisition of relevant information, for example, takes up a great deal of time, since there is no general index of all existing Internet sites and services. As a consequence, companies have to find other ways of drawing the users attention to their offers. One means of achieving that goal might be the distribution of commercial e-mails. Commercial e-mails can be classified as a form of advertising, which is considered to be a type of persuasive discourse. Due to the fact that advertisers are supposed to be striving to alter behaviour, awareness, knowledge, and attitudes in a way that would be beneficial to them, advertising is informative only on the surface. Therefore, no more distinction between informative and persuasive advertising is made. Accordingly, commercial e-mails are expected to have a persuasive intent which is assumed to be mirrored in a number of [...]

Security and Protection in Information Processing Systems Yves Deswarte,Frederic Cuppens,Sushil Jajodia,Lingyu Wang,2006-04-11 Security is probably the most critical factor for the development of the Information Society. E-government, e-commerce, e-healthcare and all other e-activities present challenging security requirements that cannot be satisfied with current technology, except maybe if the citizens accept to waive their privacy, which is unacceptable ethically and socially. New progress is needed in security and privacy-preserving technologies. On these foundations, the IFIP/SEC conference has been established from the eighties as one of the most important forums for presenting new scientific research results as well as best professional practice to improve the security of information systems. This balance between future technology improvements and day-to-day security management has contributed to better understanding between researchers, solution providers and practitioners, making this forum lively and fruitful. Security and Protection in Information Processing Systems contains the papers selected for presentation at the 19th IFIP International Conference on Information Security (SEC2004), which was held in August 2004 as a co-located conference of the 18th IFIP World Computer Congress in Toulouse, France. The conference was sponsored by the International Federation for Information Processing (IFIP).This volume is essential reading for scholars, researchers, and practitioners interested in keeping pace with the ever-growing field of information security.

Experiment Design for Civil Engineering Francis J. Hopcroft, Abigail J. Charest, 2023-02-17 Experiment Design for Civil Engineering provides guidance to students and practicing civil engineers on how to design a civil engineering experiment that will produce useful and unassailable results. It includes a long list of complete experiment designs that students can perform in the laboratory at most universities and that many consulting engineers can do in corporate laboratories. These experiments also provide a way to evaluate a new design against an existing experiment to determine what information is most appropriate in each section and how to format the data for the most effective outcome. Interpretation of output data is discussed, along with uncertainty, as well as optimal presentation of the data to others. The content of the first 8 chapters is similar in format to authors' recent title, Experiment Design for Environmental Engineering: Methods and Examples (CRC Press, 2022) and has been revised for civil engineers. This textbook: Fills in the gap in ABET requirements to teach experiment design. Provides a standardized approach to experiment design that can work for any experiment. Includes completed experiment designs suitable for college laboratory and professional applications. Shows how to organize experimental data as it is collected to optimize usefulness. Provides templates for design of the experiment and for presenting the resulting data to technical and nontechnical audiences or clients.

Natural Language Processing and Information Systems Andrés Montoyo, Rafael Muñoz, Elisabeth Métais, 2005-06-01 NLDB 2005, the 10th International Conference on Applications of Natural Language to Information Systems, was held on June 15-17, 2005 at the University of Alicante, Spain. Since the first NLDB conference in 1995 the main goal has been to provide a forum to discuss and disseminate research on the integration of natural language resources in information system engineering. The development and convergence of computing, telecommunications and information systems has already led to a revolution in the way that we work, communicate with each other, buy goods and use services, and even in the way that we entertain and educate ourselves. The revolution continues, and one of its results is that large volumes of information will increasingly be held in a form which is more natural for users than the data presentation formats typical of computer systems of the past. Natural language processing (NLP) is crucial in solving these problems, and language technologies will make an indispensable contribution to the success of information systems. We hope that NLDB 2005 was a modest contribution to this goal. NLDB 2005 contributed to advancing the goals and the high international standing of these conferences, largely due to its Program Committee, composed of renowned researchers in the field of natural language processing and information system engineering. Papers were reviewed by three reviewers from the Program Committee. This clearly contributed to the significant number of papers submitted (95). Twenty-

ninewereacceptedasregularpapers,while18were accepted as short papers.
