Burns Robert L. Sheridan,2011-10-30 This book emphasizes the fundamental surgical, medical and related procedures involved in each stage of burn care, thus enabling the reader to focus on the essentials, and ensure the best outcome for patients. Chapters range from burn physiology, initial care and resuscitation, to wound evaluation and surgical management, respiratory and critical care, rehabilitation, reconstruction and aftercare. The book's concise visual approach will appeal to all professionals caring for burn patients in acute or recovery phases.

Total Burn Care David N. Herndon,2017-10-10 Recent advances in research have resulted in tremendous changes in burn management. Stay fully up to date with the new edition of Total Burn Care, by leading authority Dr. David N. Herndon. Detailed procedural guidelines walk you through every step of the process, from resuscitation through reconstruction and rehabilitation. Everyone on the burn care team, including general and plastic surgeons, intensivists, anesthesiologists, and nurses, will benefit from this integrated, multidisciplinary guide to safe and effective burn management. Discusses infection control, early burn coverage, occupational physical exercise, respiratory therapy, and ventilator management. Summarizes key points at the beginning of each chapter for quick reference. Uses an integrated, team approach to help you meet the clinical, physical, psychological, and social needs of every patient. Offers expert guidance on early reconstructive surgery and rehabilitation, with new content on improved surgical techniques. Provides access to 15+ procedural operative videos and PowerPoint presentations on topics ranging from alopecia and anesthesia to radiation and treatment of infection – ideal for teaching and presenting. Covers special populations such as elderly and pediatric patients, and includes a new chapter on burns in pregnancy. Expert Consult™ eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, and references from the book on a variety of devices.

Outcome of burn care Laura Pompermaier,2017-11-09 Background: Despite the improvements in burn care during the last decades, burns remain catastrophic for the patients and a challenge for the care-givers. The early outcome of burn care is to assess its quality and to improve it, but the crucial outcome is mortality, which is the main focus of this thesis. In particular, I address questions about mortality that have arisen from working with burned patients and that can have clinical consequences: the impact of pre-existing medical conditions; long-term survival; the causes of unexpected deaths; and the possible differences between sexes in the provision of resources. Patients with burns share the fact that the time of their injury is known, its severity can be quantified from the size of the burn, and the care is relatively standardised. The analysis of outcome among burned patients treated at a single burn centre may therefore be of general value to others who treat burns. Methods: We retrospectively analysed data that had been collected prospectively (the burn unit database) from patients with burns admitted consecutively to a national burn centre in Sweden during the last 25 years. Results: Age and percentage of total body surface area burned (TBSA %) affected the in-hospital mortality, whereas pre-existing medical conditions did not influence the prediction of outcome (Paper I). After discharge, both age and the presence of full thickness burns reduced the long-term survival, whereas the extent of the burn (TBSA %) did not (Paper II). Most patients with moderate burns who die in hospital despite a good prognosis, die for reasons other than the burn (Paper III). Previously, it has been shown that sex is not an independent factor for mortality during burn care; in this thesis we show that the sex of the patients did not affect the number of medical interventions given either (Paper IV). Conclusion: The addition of “coexisting condition” to a mortality model based on age and size of burn does not improve its predictive value; rather, the factor “age” is sufficient to adjust for comorbidity in the assessment of a burn and its outcome (Paper I). If patients with burns survive, the long-term prognosis is good. The effect of age is the one that governs survival, whereas the effect of the extent of the burn ends when the patient is discharged (Paper II). The in-hospital mortality during burn care is low, but some patients die for reasons other than the actual burn (Paper III). In a centre where the mortality is independent of the sex of the patient, the provision of medical interventions is also equal between men and women (Paper IV). Questa tesi tratta del rischio di morte in seguito ad ustioni ed affronta, con approccio scientifico, alcune domande sollevate frequentemente da pazienti e da addetti ai lavori. In particolare: a presenza di altre malattie a prescindere dall'ustione (diabete, nefropatie, alcolismo, etc.) peggiora la prognosi del paziente?L'essere sopravvissuto ad un'ustione riduce l'aspettativa di vita dopo la dimissione dall'ospedale?Qual è la causa di morte in quei (rari) pazienti che muoiono con ustioni di modesta entità?Il sesso del paziente influenza le cure prestate durante il ricovero ed, in tal caso, qual è l'effetto sulla prognosi? Spesso avevamo risposto a questi interrogativi di interesse clinico basandoci sull'esperienza o su luoghi comuni accettati acriticamente. Con questa tesi abbiamo cercato con metodo scientifico delle risposte di valore generale, analizzando i dati raccolti durante l'ultimo ventennio sui pazienti ricoverati a causa di traumi termici al Centro Nazionale Grandi Ustioni dell'Università di Linköping. In Svezia, come negli altri paesi a reddito medio-alto, il tasso di mortalità in seguito ad ustioni è diminuito notevolmente negli ultimi anni, tuttavia l'obiettivo principale tra gli addetti ai lavori rimane quello di diminuire ulteriormente la mortalità. L'identificazione precoce di pazienti ad alto rischio di morte fornisce un mezzo utile per migliorarne la prognosi. A tale proposito sono stati sviluppati numerosi modelli matematici in grado di calcolare la probabilità di morte in seguito ad ustioni, basati principalmente sull'età del paziente e sull'estensione dell'ustione. Infatti, è intuitivamente comprensibile che il rischio di morire aumenti con l'età del paziente e la gravità dell'ustione. Nel nostro primo studio abbiamo aggiunto ad un modello prognostico basato su età e superficie corporea ustionata informazioni sulle malattie già presenti nel paziente prima dell'ustione. Contrariamente a quanto ipotizzato, la presenza di altre malattie negli ustionati non ne aumenta la probabilità di morte. Nel nostro secondo studio abbiamo seguito i pazienti sopravvissuti all'ustione dopo la dimissione dal nostro Centro ed abbiamo dimostrato che l'ustione in sé non ne accorcia la vita né a breve termine (nei 30 giorni seguenti la dimissione), né a lungo termine. È piuttosto inusuale che pazienti con ustioni di modesta gravità muoiano durante il ricovero ospedaliero. Nel nostro terzo studio abbiamo dimostrato che la principale causa di morte tra questi pazienti non è correlata all'ustione in sé, ma ad altre patologie indipendenti dal trauma termico, quali l'ictus o l'infarto miocardico. A livello internazionale è stato ampiamente documentato un impari impiego delle cure mediche tra i sessi, a discapito delle donne. Questa disparità riguarda principalmente la diversa allocazione delle risorse terapeutiche, ma ha conseguenze negative sull'esito finale della cura. Studi provenienti da diversi centri per la terapia delle grandi ustioni (USA, Australia, India) hanno dimostrato che il rischio di morte in ospedale è maggiore per le pazienti femmine. In contrasto con questo, una precedente ricerca svolta presso il nostro centro non ha mostrato alcuna differenza nella sopravvivenza tra uomini e donne. Anche tra i pazienti della terapia intensiva generale svedese la mortalità è simile per entrambi i sessi, nonostante gli uomini ricevano più trattamenti rispetto alle donne. Questa osservazione apre le porte ad un'ovvia domanda, e cioè: se le donne ricevessero le stesse attenzioni degli uomini morirebbero esse su scala minore? In linea con i risultati riguardanti la mortalità precedentemente pubblicati dal nostro centro, col nostro quarto studio abbiamo dimostrato che non esiste alcuna disparità tra i sessi nella distribuzione delle risorse. In sintesi, con questa tesi abbiamo dimostrato che: i fattori che maggiormente influenzano la prognosi in caso di ustione sono l'età del paziente e l'area corporea ustionata; la presenza di altre patologie non aumenta significativamente il rischio di morte.L'essere sopravvissuto ad un'ustione non riduce l'aspettativa di vita dopo la dimissione dall'ospedale.Una percentuale non indifferente delle morti che si verificano durante il periodo di cura per ustioni di modesta gravità è causata da fattori indipendenti dall'ustione stessa.Uomini e donne nel nostro centro ricevono equo trattamento. La prognosi per donne e uomini ricoverati nel nostro centro è la stessa. Riteniamo che i risultati presentati in questa tesi dovrebbero essere tenuti in considerazione nella terapia dei pazienti ustionati: il trattamento attivo dovrebbe essere offerto a chiunque abbia una ragionevole possibilità di sopravvivenza, calcolata sulla base dell'età e della gravità dell'ustione. Una volta

guariti da un'ustione l'aspettativa di vita è buona. Non va scordato che, tra i pazienti che muoiono in seguito ad un'ustione, le cause di morte potrebbero essere dovute a patologie di altra natura. Non si evidenziano differenze nelle mortalità, lì dove venga offerto uguale trattamento a uomini e donne.

Handbook of Burns Volume 2 Lars-Peter Kamolz,Marc G. Jeschke,Raymund E. Horch,Markus Küntscher,Pavel Brychta,2012-07-26 This volume compiles the perspectives of a multi-author team examining the entire spectrum of burn reconstruction and long-term treatment. Individual chapters cover basic aspects of wound healing and scarring, and those of plastic surgery relating to tissue rearrangement and the use of flaps, as well as the long-term use of skin and skin substitutes. Furthermore, topics such as rehabilitation and scar management are addressed in detail. This part provides detailed reconstruction guidelines divided by anatomic region (e.g. face, hands,...), as well as aspects of future trends and prospects in burn reconstruction, among which are e.g. allotransplantation and bionics.

Make Your Body a Fat-Burning Machine John Abdo,2002-09-14 With cyberspace and the hypnotic pull of television screens keeping us seated and motionless for at least five hours a day, not to mention our passion for rich, greasy, sugar-laden foods, we of the 21st century have evolved into an all-you-can-eat, all-you-can-watch society-even though survey after survey shows we know better, and despite the fact that many of us really and truly want leaner, healthier, more efficient bodies. At 45 years old and with a body fat level of just five percent, John Abdo, is proof of how simple, healthy lifestyle choices can result in a tighter and leaner body. Trainer of elite athletes such as gold-medal speed skater Bonnie Blair and three-time world power lifting champion Craig Tokarski, Abdo is the inventor of and spokesman for the fastest selling exercise equipment in America: the AB-DOer. Make Your Body a Fat-Burning Machine provides: *A detailed explanation of how an intelligently designed eating and exercise program can turbo-charge the metabolic process to create an efficient and enduring fat incinerator *An easy-to-understand, nonthreatening exercise program that takes just 10 to 15 minutes at a time yet burns more fat than traditional aerobic exercise *Nutritional guidelines rather than a rigid diet *Self assessment tests to help identify needs and track progress *The 30-Day meltdown: a quick-start exercise and nutrition regimen that enables the loss of up to 25 pounds of fat in the first month *Low-fat, easy-to-prepare nutritionally balanced recipes *A troubleshooting guide for dealing with setbacks, adjustments, and time management. Finally, Make Your Body a Fat Burning Machine provides the information and support needed to incorporate this program and ideas into a permanent way of life.

Burns Regenerative Medicine and Therapy Rong Xiang Xu,2004-01-01 'Regenerative Medicine' is an innovative concept representing a unique approach to the regeneration of functional tissues and organs. This book reveals the scientific principles behind this newly discovered practice while instructing the reader in the procedure of Moist-Exposed Burns Treatment (MEBT) and offering compelling examples of tissue and organ regeneration from ordinary cells incubated in potent nutrient baths. Prof. Xu - the inventor of MEBT and MEBO (Moist-Exposed Burns Ointment) - gives an in-depth description of how healthy and pathological tissues behave in varied treatment environments. Further, he demonstrates that ordinary cells can differentiate into varied organ tissues and, for the first time, introduces MEBT including the use of MEBO to the western scientific community. This publication will add a new dimension to the discussions on burns treatment, stem cells, immunology and cell biology. Burns specialists will learn of the new gold standard in burns treatment, and cell biologists of the potential of ordinary cells.

Burns Iain S. Whitaker,Kayvan Shokrollahi,William A. Dickson,2019-05-16 Burn injuries are recognised as a major health problem worldwide, causing morbidity and mortality in individuals of all ages. The Oxford Specialist Handbook of Burns is a concise, easy-to-navigate reference text that outlines the assessment, management, and rehabilitation of burns patients. With contributions from international experts, this handbook covers all aspects of burn-patient care, from first aid to reconstructive techniques and physiotherapy. This new, pocket-sized title is an invaluable resource for all those who come into contact with burns patients, from accident and emergency doctors to allied health professionals, as well as specialists and trainees in burns units. Filling an important niche in the market for an accessible quick-access guide for those first on the scene, The Oxford Specialist Handbook of Burns is a comprehensive and detailed new resource.

The Essential Burn Unit Handbook, Second Edition Jeffrey J. Roth,William Hughes,2015-11-11 The Essential Burn Unit Handbook is a pocket-sized reference dedicated to the evaluation, diagnosis, care, and treatment of burn patients. It covers the spectrum of burn care, from initial assessment and treatment to long-term sequelae. This second edition includes an added chapter on the criteria for admissions to a burn unit as well as outpatient and follow-up care. It covers a wealth of topics that surgical residents, emergency medicine residents, and critical care fellows often encounter such as patient nutrition, the use of antibiotics, wound care, and some of the unique pathologic conditions seen in this distinct and often critically injured population. The book covers electrical burns, inhalation injury, chemical burns, and pediatric patient management. It also presents a full range of day-to-day management modalities along with sample orders and templates for patient presentation and the organization of notes. A quick-reference glossary includes many of the acronyms and abbreviations used in this setting as well as a list of useful equations and ranges. This book will help you provide better patient care while shortening your learning curve. It stands alone as the most convenient, practical, and informative guide available today for those working with burn patients.

Handbook of Burns Volume 2 Lars-Peter Kamolz,Marc G. Jeschke,Raymund E. Horch,Markus Küntscher,Pavel Brychta,2020-07-22 The second edition of this volume has been updated with chapters on scar treatment using laser, microneedling, tissue engineering, adipose tissue and lipofilling. It compiles the perspectives of a multi-author team, examining the entire spectrum of burn reconstruction and long-term treatment. Individual updated chapters cover basic aspects of wound healing and scarring, and plastic surgery relating to tissue rearrangement and the use of flaps, as well as the long-term use of skin and skin substitutes. Furthermore, it addresses topics such as rehabilitation and scar management in detail. It provides comprehensive reconstruction guidelines organized by anatomic region (e.g. face, hands, ...) as well as future trends and prospects in burn reconstruction, such as allotransplantation and bionics. Take a Deep Breath David E. Burns,2009-12 Take A Deep Breathpresents real stories from an Upstate New York doctor: how he succeeds after he leaves the farm and proceeds through professional training. The uncertainty from being a student is erased as he matures professionally during Residency—the doctor relates gritty descriptive accounts of the many people in need. Experience his acute clinical decisions—his own mother, critically ill, dying before his eyes as he advances a pacing-wire into her failing heart. Understand why his practice was so remote, far from the ivy towers of academics. He tells of exceptional events—gripping tales of numerous people in extremis—which were routine moments of his Practice. His words bring us near—compel us to smell the antiseptic, the acidity of burnt flesh as well as the pungency of fabric after a fire. Through his prose, one can taste the drama of resuscitation, the salty tears of failure, and the sweetness of success. From an ER to a lakeside drowning, from acute illness to crushing auto injuries, descriptions are up close and personal. All take us on a serious medical ride.David E. Burns MD

Modern Treatment of Severe Burns Zhi-yang Fang,Zhi-yong Sheng,Ngao Li,Sheng-de Ge,2012-12-06 This volume represents a comprehensive introduction to current practices in the management of severe burns in the People's Republic of China. Thus although based largely on clinical work and experimental research performed in China, it also takes account of work done

elsewhere. The 18 chapters deal with such topics as the history and development of burn surgery in China, the assessment of the severity of burns, first aid, early fluid resuscitation measures, the treatment of inhalation injury, wound management, the surgical treatment of deep burns, wound coverage and epithelial culture, measures to cope with local and systemic infection, immunology, the management of multiple organ failure, metabolism and nutrition, and rehabilitation. The application of techniques from traditional Chinese medicine to the management of burn injuries is also described.

Management of Burns, An Issue of Surgical Clinics, Robert Sheridan,2014-08-12 Editor Robert Sheridan and authors review the latest in Management of Burns. Articles will include Reflection: evolution of the field over 50 years, Acute burn procedures and operations, Special injuries and illnesses, Initial evaluation and fluid resuscitation, Critical care of burns, Biology and principles of scar management and burn reconstruction, Management of common post-burn deformities, Burn recovery—physical and emotional rehabilitation, Anesthesia and pain control for burns, Outpatient burn management, Measuring burn outcomes, Burn care in disasters and austere settings, On the horizon--research priorities for the next decade, and more!

Burn Care for General Surgeons and General Practitioners David G. Greenhalgh,2016-04-12 This textbook on burn care is focused specifically on the needs of a surgeon. It provides a “how to do” text that presents the practical strategies for initial resuscitation, skin grafting, burn-specific critical care and ultimately guide the surgeon for the best outcomes for the burn surgeon. It provides the reader with basic pathophysiology but avoids a detailed review of the molecular science of burns. Guidelines for basic care with the chapters covering the timeline used for each patient spanning from initial resuscitation (ABCs) to managing their re-socialization are provided. The text covers the key components to the initial management of the burn patient including airway, breathing and circulation. The reader is introduced to the metabolic changes of a major burn and how nutrition and pharmacologic manipulation affects these systemic effects of a burn injury. The management of burn sepsis as well as the basic concepts of wound healing of the different depths and severity of burns are covered. Another chapter covers the basic techniques of skin grafting, rehabilitation and reconstruction with a focus to optimize the cosmetic and functional outcome of the burn. Special chapters cover management of outpatient burns and pediatric injuries. Special burns – electrical, chemical, cold injuries and finally the treatment of other diseases that lead to massive skin loss are covered. Special considerations for pain, scar management, psychosocial recovery, intentional burns, burn prevention and disaster preparation complete the text. Burn Care for General Surgeons and General Practitioners provides a reference for general and plastic surgeons who are planning a career in burns. The textbook will also be a straightforward resource for the general or plastic surgeon who takes care of burns as part of their practice.

Burns Emily S. McLaughlin,2012 This book presents topical research in the study of the prevention, causes and treatment of burns. Topics discussed in this compilation include emergency burn care; nanotechnology and nanomedicine advancements in burn therapy; post-burn hand deformities; the role of apoptosis in burn injury; burns during arthroscopy due to the use of electrosurgical devices; the body's local and consecutive, systemic pathophysiological reaction to thermal lesions; the burn reconstructive units on the face and neck; use of modern day technology for pain management during burn injury rehabilitation; carbon monoxide intoxication in burns; the clinical application of Versajet Hydrosurgery System in burn debridement and escharotomy techniques in burn injuries.
