Quantitative Models for Performance Evaluation and Benchmarking Joe Zhu,2013-03-09 Managers are often under great pressure to improve the performance of their organizations. To improve performance, one needs to constantly evaluate operations or processes related to producing products, providing services, and marketing and selling products. Performance evaluation and benchmarking are a widely used method to identify and adopt best practices as a means to improve performance and increase productivity, and are particularly valuable when no objective or engineered standard is available to define efficient and effective performance. For this reason, benchmarking is often used in managing service operations, because service standards (benchmarks) are more difficult to define than manufacturing standards. Benchmarks can be established but they are somewhat limited as they work with single measurements one at a time. It is difficult to evaluate an organization's performance when there are multiple inputs and outputs to the system. The difficulties are further enhanced when the relationships between the inputs and the outputs are complex and involve unknown tradeoffs. It is critical to show benchmarks where multiple measurements exist. The current book introduces the methodology of data envelopment analysis (DEA) and its uses in performance evaluation and benchmarking under the context of multiple performance measures.

Performance simulation of modular product architectures by model-based configuration Florian M. Dambietz,2021-09-30 The use of modular product architectures can significantly increase the efficiency in manufacturing companies. Various modularization methods are used in the development of these architectures, but they always result in different architecture alternatives. This thesis describes the development of a model-based simulation for multi-dimensional performance assessment of these architecture alternatives with their corresponding modular kits. The central element of this simulation is formed by a model-based configuration system, identifying individually valid product variants using concepts and tools of Model-based-systems-engineering (MBSE). Based on the developed Hyperspace algorithm, a geometric-mathematical solution approach, these variants are then evaluated considering multiple parameters. By recursively configuring multiple customer requests using alternative modular kits, an individual performance criterion of these alternatives can be generated, including customer-, market- and company parameters. This thesis describes the development of the performance simulation on the basis of a simplified explanation example. A validation based on customer-specific laser welding systems is also shown.

Performance Evaluation Harald Dyckhoff,Rainer Souren,2020-01-13 This book examines performance evaluation in the context of assessing the non-financial outcomes of human activities. The topic is particularly relevant when economic, environmental or social performance has to be evaluated, e.g. the efficiency of actions and the lifecycles of products. The authors combine multi-criteria decision-making and production theories to develop a theoretical and methodological foundation for performance evaluation. They also demonstrate the typical pitfalls that are hindering the implementation of contemporary methods in practice. Special emphasis is placed on efficiency measurement with data envelopment analysis (DEA), and on data aggregation in life cycle assessment (LCA).

Success Factor: Corporate Culture Sonja A. Sackmann,2011-06-27 Do corporate culture and leadership contribute to a firm's success? And if so, how? How can a company create and develop its corporate culture to compete successfully over the long term? Answers to these questions emerge in case studies of the business practices of six long-established and world-renowned companies: the BMW Group, Deutsche Lufthansa, Grundfos, Henkel, Hilti and Novo Nordisk. In a project initiated by the Bertelsmann Stiftung, researchers investigated these firms and analyzed the central characteristics of corporate success from a culture perspective. The case studies render a detailed picture of each firm's distinctive corporate culture and the factors that shape it. Based on these examples, Sonja A. Sackmann has identified concrete strategies and practices that illustrate how a company's management can make a significant contribution toward developing a dialogue-oriented corporate culture that supports a firm's viability. The appendix provides a checklist for readers who want to develop their firm's culture and practice culturally aware management.
