Application Service Providers in Business Luisa Focacci,Robert Mockler,Marc Gartenfeld,2013-10-23 Learn how to use Application Service Providers to enhance the future of your business! Application Service Providers in Business is a comprehensive analysis of the present ASP model and its place in business today. Business success in today's information-intensive marketplace depends on a company's ability to acquire and fully use the latest advancements in business-critical applications. By having these applications delivered as services over the Internet, businesses can lessen the demands on company IT staff, and increase the ability to get complex software into use immediately. Within this context, a new outsourcing business model called ASP (Application Service Provider) has emerged that is transforming how businesses access and leverage software applications. The book explains the specific contingent ASP models, including business, enterprise, functional-focused, and vertical market ASPs, and ASP aggregators. It demonstrates how different ASP models have fulfilled diverse market/customer expectations and explores future scenarios for current ASP business models. Case studies, tables, and figures illustrate important concepts and make complex information easy to access and understand. Based on a thorough analysis of the ASP market environment, the book provides detailed Best Practices Guidelines that managers of ASPs can use to improve the chances of success of their respective ASPs. It outlines contingency factors such as application offerings, customer selection, operations, and strategic fit. The book also not only assists business managers in deciding on whether to use an ASP, but it presents ways to use ASPs to effectively support their business process. The ability to provide the workforce with access to data whenever and wherever is crucial for positively impacting a company's profitability, and ASPs provide the software to make it possible. Topics included in Application Service Providers in Business are: Best Practices Guidelines strategic management management decision making and planning IT management and outsourcing future of the ASP market ASP business models and much more! Application Service Providers in Business is a comprehensive resource for executives, managers, professors, and business students in the US and worldwide. Using the information and guidelines provided, executives and managers can learn how to use ASPs to enhance their business, and managers of ASPs can learn how to increase their chance of success in the competitive ASP market. The material is also appropriate as a textbook for management and computer information/software development classes.

Unleashing the Killer App Larry Downes,Chunka Mui,1998 When technologies, products, and services converge in radical, creative new ways, a killer app emerges-a new application so powerful that it transforms industries, redefines markets, and annihilates the competition. The steam engine, the cotton gin, and the Model T were all killer apps of their time. Today's killer apps spring from the digital realm: the personal computer, e-mail, and the World Wide Web. Tempted by the promise of such devastating power, companies large and small, from vast multinationals to lean entrepreneurial start-ups, are remaking themselves into organizations that nurture killer apps rather than succumb to them. How is it done? In this groundbreaking new book, strategists Downes and Mui identify the twelve fundamental design principles for building killer apps and offer a progressive guide to transforming your company into a place where killer apps are born. Unleashing the Killer App provides the tools, the techniques, and the proof that you

need to incubate the killer app within your organization--and perhaps even release one.

   Game Theory and Business Applications Kalyan Chatterjee,William Samuelson,2013-06-26 Game theory has been applied to a growing list of practical problems, from antitrust analysis to monetary policy; from the design of auction institutions to the structuring of incentives within firms; from patent races to dispute resolution. The purpose of Game Theory and Business Applications is to show how game theory can be used to model and analyze business decisions. The work is intended as a standalone book in a series covering the activities of the Internet of Things European Research Cluster (IERC) – including research, technological innovation, validation, and deployment. The book chapters build on the developments and innovative ideas put forward by the IERC, the IoT European Large-Scale Pilots Programme and the IoT European Security and Privacy Projects – presenting new concepts, ideas and future IoT trends and ways of integrating open data frameworks and IoT marketplaces into larger deployment ecosystems. The IoT and Industrial Internet of Things technologies are moving towards hyperautomated solutions – combining hyperconnectivity, artificial intelligence (AI), distributed ledger technologies and virtual/augmented extended reality, with edge computing and deep edge processing becoming an assertive factor across industries for implementing intelligent distributed computing resources and data to keep the efficient data exchange and processing local to reduce latency, exploit the sensing/actuating capabilities and enable greater autonomy. Expanding the adoption of consumer, business, industrial and tactile IoT requires further development of

hyperautomated IoT concepts for collaborative solutions involving machines and humans to expand augmented creativity at the application level using AI to optimise the industrial processes and progress towards a symbiotic economy based on distributed federated cloud/edge infrastructure allowing resource sharing in the form of computing, memory and analytics capabilities. The advances of autonomous IoT applications delivering services in real-time encompasses development in servitisation, robotisation, automation and hyperconnectivity, which are essential for the rapid evolution of industrial enterprises in the new digital era. The rise of digital twins integrated into IoT platforms as fully interactive elements embedded into the simulation and optimisation environment, as well as the embedment of AI techniques and methods, enhances the accuracy and performance of models in the various IoT and Industrial Internet of Things applications. The convergence of technologies to provide scalable, interoperable IoT-enabled applications pushed the requirements for high bandwidth, low latency and robust and dependable connectivity to support the industry's demand for deeper integration and improved analytics to deliver sustainable competitive advantage products and services, enabling digital transformation with a focus on new business models.Safety and security are interlinked for the next wave of IoT technologies and applications and combined, prove a greater value for rapid adoption.
