Human Services in the Network Society Neil Ballantyne, Walter La Mendola, 2014-07-16 The Internet and the many applications it supports continue to transform and expand the ways in which it is possible to relate, communicate, collaborate, and perform human service work. In this book, human service researchers and practitioners explore major opportunities and challenges to well being, social justice, and human service work that technology use in everyday life has exposed. Drawing on the latest research their contributions examine issues associated with human service practices in the network society, including: the implications of an expanded capacity to share human service data across agency and national boundaries; ethical issues associated with the use of remote sensing and surveillance technologies (e.g. the satellite tracking of offenders, and telecare services for older people); the risks and benefits of social network sites including issues associated with online privacy, intimacy, and safety; and the influence of technology-mediated services on human relationships and the sense of 'being present' with another person. Human Services in the Network Society will be of considerable interest to human service professionals, academics and researchers who are concerned about the social impact of networked technologies. This book was previously published as a special issue of the Journal of Technology in Human Services.

Legal Issues of Mobile Apps Ioannis Iglezakis, 2020-05-12 In less than ten years touchscreen smartphones and their apps have created an unprecedented technological revolution. Yet they are rife with serious potential for breaches of privacy and security, and a lack of uniform rules makes navigation of the legal landscape extremely difficult. Addressing this unstable regulatory environment, this concise, practical guide for the first time provides a measure of legal certainty. It examines case law and legislation in Europe and the United States to highlight the rights and obligations of all actors involved in the marketing of mobile apps, bring to light essential principles and recommend some viable solutions. Nine experts, all versed in the latest developments in international and national laws and regulations affecting digital mobile technology, examine such key topics as the following: contract law as applied to the sale and use of smartphone apps; intellectual property rights in mobile apps; protection of users; data protection; European Union (EU) medical device legislation and its safety implications for app users; fitness or wellness apps; apps' collection of personal data; apps as hostile code and malware delivery mechanisms; competition law issues; taxation of mobile apps; liability issues for app developers and distributors; and implications of the EU's new regulatory framework on online platforms. Because it is difficult for a basic user to understand how vulnerable everyday apps can be, and because every new information technology platform delivers new risks along with its benefits,

legal practitioners working in a wide variety of fields will be increasingly called upon to engage with both personal and enterprise security and privacy breach cases arising from the use of mobile apps. This deeply informed practical analysis goes a long way toward ensuring appropriate handling of legal issues which arise in the mobile app context. Every practitioner, government official and software developer will welcome this much-needed volume.

Digital Africa Tania Begazo,Moussa Blimpo,Mark Dutz,2023-04-04 All African countries need better and more jobs for their growing populations. Digital Africa: Technological Transformation for Jobs shows that broader use of productivity-enhancing digital technologies by enterprises and households is imperative to generate such jobs, including for lower-skilled people. At the same time, broader use can support not only countries' short-term objective of postpandemic economic recovery but also their vision of economic transformation with more inclusive growth. These outcomes are not automatic, however. Mobile internet availability has increased throughout the continent in recent years, but Africa's uptake gap is the highest in the world. Areas with at least 3G mobile internet service now cover 84 percent of country populations averaged across Sub-Saharan Africa, but only 22 percent use such services. The average African business lags in the use of smartphones and computers, as well as more sophisticated digital technologies that catalyze further productivity gains. Two issues explain the usage gap: the affordability of these new technologies and the willingness to use them. For the 40 percent of Africans below the extreme poverty line, mobile data plans alone would cost one-third of their incomes—in addition to the price of access devices, apps, and electricity. Data plans for small and medium businesses are also more expensive than in other regions. Moreover, shortcomings in the quality of internet services—and in the supply of attractive, skill-appropriate apps that promote entrepreneurship and raise earnings—dampen people's willingness to use them. For those countries already using these technologies, the development payoffs are significant. New empirical studies for this report add to the rapidly growing evidence that mobile internet availability directly raises enterprise productivity, increases jobs, and reduces poverty across Africa. To realize these and other benefits more widely, Africa's countries must implement complementary and mutually reinforcing policies to strengthen both consumers' ability to pay and willingness to use digital technologies. These interventions must prioritize productive use to generate large numbers of inclusive jobs in a region poised to benefit from a massive, youthful workforce—one projected to become the world's largest by the end of this century.

Uses and Risks of Business Chatbots Tania Peitzker,2020-03-24 In this easy-to-read book, Tania Peitzker cites leading business intelligence and analyst firms' research and takes a deeper dive into the practical challenges of chatbots, including the obstacles and triumphs experienced. This world-first summary of the evolution of 2D chatbots in websites, backends of portals, social media apps, and conversationally advanced 3D mixed reality cognitive interfaces serves several purposes. This book dissects some of the best-known case studies to emerge from the past two decades of tech giants launching the best chatbot, or supposedly the smartest, intelligent virtual assistant. From Microsoft's Tay.ai to London's Eugene Goostman claim to turing test fame, from the market dominating Amazon Alexa to Gatebox's IoT innovation with its multi-cloned Japanese hologram girlfriend, this is the first ever history of bots. This book also touches on the Trump vs Clinton chatbot wars as well as the UK Labour Party's dating site stunt, including references made to Facebook Messenger bots and the impact of the Cambridge Analytica scandal. Included in the book is a hands-on checklist and guidelines in for people wanting to buy or license bots for their companies and organizations. The author also outlines the possible use cases and key issues to consider when sourcing and commissioning your first botification project, with the final chapters predicting where the future development – and development traps – might lie.

Competition Law in Latin America Julián Peña,Marcelo Calliari,2022-06-06 In the past few years, Latin American countries have taken giant steps to

reposition their competition authorities in the global antitrust arena, granting them much greater autonomy both domestically and internationally. This is an updated edition of the first book that offered an in-depth analysis of this complex scenario. The first part of the book includes more general chapters written by leading experts on a variety of relevant topics analyzed at a regional level such as the issues emerging with the digital economy and on the special field of the information and communications technology industry, as well as chapters on broad regional trends, on the working of competition law in countries with regulated markets and in the cluster of Central American countries, among others. At the heart of the presentation are nine chapters detailing the competition regimes of the most active national jurisdictions in the region—Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru, and Uruguay. Written by practicing experts with considerable hands-on experience in their respective countries, each of these chapters provides a comprehensive description and explanation of the evolution, current state, and prospects for antitrust in the country. Topics addressed in the country analysis encompass the following and more: relevant institutions and legislation; cartel investigations; unilateral conduct policies; merger review; international coordination; enforcement; and remedies. Each chapter includes an analysis of relevant case law, allowing the reader to gauge the positions, views, and tendencies of each competition law regime. The contributors also pay attention to the specificities and idiosyncrasies that are so important for a correct understanding of the practical realities of competition policy and enforcement. With its wide-ranging and in-depth approach, this book provides an incomparable analysis of a challenging region poised to become increasingly important in the international recognition and enforcement of antitrust law. It is in this sense an essential guide for lawyers, economists, corporations, academics, and government officials interested in understanding where competition law is, and where it is going to, in Latin America.

The Age of Surveillance Capitalism Shoshana Zuboff,2019-01-15 The challenges to humanity posed by the digital future, the first detailed

examination of the unprecedented form of power called surveillance capitalism, and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new behavioral futures markets, where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new means of behavioral modification. The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a Big Other operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled hive of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it.
