Shock Compression of Condensed Matter - 1991 S.C. Schmidt, R.D. Dick, J.W. Forbes, D.G. Tasker, 2016-07-29 The papers collected together in this volume constitute a review of recent research on the response of condensed matter to dynamic high pressures and temperatures. Included are sections on equations of state, phase transitions, material properties, explosive behavior, measurement techniques, and optical and laser studies. Recent developments in this area such as studies of impact and penetration phenomenology, the development of materials, especially ceramics and molecular dynamics and Monte Carlo simulations are also covered. These latest advances, in addition to the many other results and topics covered by the authors, serve to make this volume the most authoritative source for the shock wave physics community.

The Animated Film Collector's Guide David Kilmer, 1997 In the age of video, nearly every film ever made is available on video somewhere. The only problem is finding it. This

guide lists, both title and producer, nearly 3000 animated films, the sources of their video copies, with the sources' telephone, fax numbers, postal address, and e-mail. Included are many hard-to-find films. This is the only source of information you will need to track it down. An added bonus is a listing of more than 200 films that have won major prizes at animation festivals and/or placed on animation polls.

Modular Neural Networks and Type-2 Fuzzy Systems for Pattern Recognition Patricia Melin,2011-10-18 This book describes hybrid intelligent systems using type-2 fuzzy logic and modular neural networks for pattern recognition applications. Hybrid intelligent systems combine several intelligent computing paradigms, including fuzzy logic, neural networks, and bio-inspired optimization algorithms, which can be used to produce powerful pattern recognition systems. Type-2 fuzzy logic is an extension of traditional type-1 fuzzy logic that enables managing higher levels of uncertainty in complex real world problems, which are of particular importance in the area of pattern recognition. The book is organized in three main parts, each containing a group of chapters built around a similar subject. The first part consists of chapters with the main theme of theory and design algorithms, which are basically chapters that propose new models and concepts, which are the basis for achieving intelligent pattern recognition. The second part contains chapters with the main

theme of using type-2 fuzzy models and modular neural networks with the aim of designing intelligent systems for complex pattern recognition problems, including iris, ear, face and voice recognition. The third part contains chapters with the theme of evolutionary optimization of type-2 fuzzy systems and modular neural networks in the area of intelligent pattern recognition, which includes the application of genetic algorithms for obtaining optimal type-2 fuzzy integration systems and ideal neural network architectures for solving problems in this area.

Ammonoid Paleobiology Neil H. Landman,Kazushige Tanabe,Richard Arnold Davis,1996-05-31 Renowned researchers summarize the current knowledge on ammonoid paleobiology. The book begins with a description of the systematic position of the Ammonoidea within the Cephalopoda, providing the phylogenetic framework for the rest of the book. Following discussions include soft- and hard-part morphology of ammonoids, rate of growth and ontogeny, and taphonomy and ecology. Closing chapters explore the distribution of ammonoids in time and space as well as their extinction at the end of the Cretaceous. With its diverse viewpoints and new material, this resource will benefit researchers and graduate students in paleontology, marine biology, and evolutionary biology.

Great Cities of the World W.A. Robson,2013-09-05 The giant city of today is a unique phenomenon. Never before have such acute problems of government, the provision of essential services, planning, social life, and civilized living arisen from uncontrolled urbanization. In the West and in the East, in the more developed and in the less developed countries, in capitalist and communist states, the great metropolis represents a problem of the first importance which challenges the statesman, the official, the town planner, the political scientist, the sociologist and, above all, the intelligent citizen. The editor has here assembled an authoritative series of studies describing the growth, significance, government, politics and planning of twenty-four great cities of the world. They show how these widely scattered cities faced essentially similar problems. Each study deals with the actual working of one city in the 1950s, how its elective and executive bodies are organized, the kind of political forces which motivate their activities, the scope and character of the municipal services, how they are financed. The cities dealt with include Bombay, Amsterdam, Moscow, Montreal, Stockholm, Rome, New York, London, Sydney and Tokyo. This book was first published in 1954.

Advances in Soft Computing Grigori Sidorov,Arturo Hernández Aguirre,Carlos Alberto Reyes Garcia,2010-10-21 This two-volume set LNAI 6437 and 6438 constitutes the refereed proceedings of the 9th Mexican International Conference on Artificial Intelligence, MICAI 2010, held in Pachuca, Mexico, in November 2010. Based on rigorous peer reviews, the program committee carefully selected 82 revised papers from 301 submissions for presentation in two volumes. The second volume includes 44 papers focusing on soft

computing. The papers are organized in topical sections on machine learning and pattern recognition; automatic learning for natural language processing; evolutionary algorithms and other naturally-inspired algorithms; hybrid intelligent systems and neural networks; and fuzzy logic.
