*XSL-FO* Dave Pawson, 2002-08-19 No matter how flexible and convenient digital information has become, we haven't done away with the need to see information in print. Extensible Style Language-Formatting Objects, or XSL-FO, is a set of tools developers and web designers use to describe page printouts of their XML (including XHTML) documents. If you need to produce high quality printed material from your XML documents, then XSL-FO provides the bridge. XSL-FO is one of the few books to go beyond a basic introduction to the technology. While many books touch on XSL-FO in their treatment of XSLT, this book offers in-depth coverage of XSL-FO's features and strengths. Author Dave Pawson is well known in the XSLT and XSL-FO communities, and maintains the XSLT FAQ. An online version of this book has

helped many developers master this technology. XSL-FO is the first time this reference is available in print. The first part of the book provides an overview of the technology and introduces the XSL-FO vocabulary. The author discusses how to choose among today's implementations, explains how to describe pages, and shows you what is going on in the processor in terms of layout. You'll learn about the basics of formatting and layout as well as readability. The second part focuses on smaller pieces: blocks, inline structures, graphics, color and character level formatting, concluding by showing how to integrate these parts into a coherent whole. XSL-FO also explores organizational aspects you'll need to consider?how to design your stylesheets strategically rather than letting them evolve on their own. XSL-FO is more than just a guide to the technology; the book teaches you how to think about the formatting of your documents and guides you through the questions you'll need to ask to ensure that your printed documents meet the same high standards as your computer-generated content. Written for experienced XML developers and web designers, no other book contains as much useful information on this practical technology.

Constructing a Sociology of the Arts Vera L. Zolberg, 1990-02-23 At a time when a pile of bricks is

displayed in a museum, when music is composed for performance underwater, and the boundaries between popular and fine art are fluid, conventional understandings of art are strained in describing what art is, what it includes or excludes, whether and how it should be evaluated, and what importance should be assigned the arts in society. In this book, Vera Zolberg examines diverse theoretical approaches to the study of the arts. Ranging over humanistic and social scientific views representing a variety of scholarly traditions, American and European, she then develops a sociological approach that evaluates the institutional, economic, and political influences on the creation of art, while also affirming the importance of the question of artistic quality. The author examines the arts in the social contexts in which they are created and appreciated, focusing on the ways in which people become artists, the institutions in which their careers develop, the supports and pressures they face, the publics they need to please, and the political forces with which they must contend. Particular subjects covered include the process by which works are created and re-created at different times, with changed meanings, and for new social uses; the role of the audience in the realization of artistic experiences; the social consequences of taste preferences; the reasons for change in artistic styles and for the coexistence of many art forms and styles.

*The Secrets of Happily Married Women* Scott Haltzman, Theresa Foy DiGeronimo, 2010-12-21 From the

authors of the best-selling *The Secrets of Happily Married Men* comes the much-anticipated follow-up book *The Secrets of Happily Married Women*. In their first book, Dr. Haltzman and his coauthor Theresa Foy DiGeronmio outlined a recipe for men about growing a happy marriage: treat marriage with the same sense of purpose, resolve, and single-minded devotion that they have for their job. Although that workplace formula works well for men, an entirely different set of criteria resonate with women. In *The Secrets of Happily Married Women*, Dr. Haltzman tells us stories from real women who are happy in their relationships. These women know how to get more out of their partners by doing less, by not trying so hard to make men perfect, not dragging them to couples therapy, not expecting them to think or behave like a woman. These are women from Dr. Haltzman's clinical practice and culled from thousands of contributors to his Web site [www.HappilyMarriedWomen.com](http://www.HappilyMarriedWomen.com). They have learned to understand how men really work and tap into men's powerful hard-wired desire to please women and be a better man.

*Foundations of Computer Vision* James F. Peters, 2017-03-17 This book introduces the fundamentals of computer vision (CV), with a focus on extracting useful information from digital images and videos. Including a wealth of methods used in detecting and classifying image objects and their shapes, it is the first book to apply a trio of tools (computational geometry, topology and algorithms) in solving CV problems, shape tracking in image object recognition and detecting the repetition of shapes in single images and video

frames. Computational geometry provides a visualization of topological structures such as neighborhoods of points embedded in images, while image topology supplies us with structures useful in the analysis and classification of image regions. Algorithms provide a practical, step-by-step means of viewing image structures. The implementations of CV methods in Matlab and Mathematica, classification of chapter problems with the symbols (easily solved) and (challenging) and its extensive glossary of key words, examples and connections with the fabric of CV make the book an invaluable resource for advanced undergraduate and first year graduate students in Engineering, Computer Science or Applied Mathematics. It offers insights into the design of CV experiments, inclusion of image processing methods in CV projects, as well as the reconstruction and interpretation of recorded natural scenes.
