Mindprint, the subconscious art code Edmond Furter,2014-04-11 Visual archetypes are the DNA of culture. In artefacts and artworks, where archaeo-astronomers see ancient star maps, archaeologists see cultural traditions, and anthropologists see initiation secrets, appear a standard sequence of types, on an axial grid. Structural archaeology uses constellations as myth maps to find the structure of our perception. All inspired artists, in the Stone, Ice, Bronze and Iron Ages; Babylonians, Egyptians, Chinese, Celts, Mayans, Vikings and moderns, subconsciously express mindprint, our eternal artefact. The sixteen clusters of attributes are demonstrated in 200 examples of famous art and rock art works from every continent and culture. Archetypes are statistically proven, and their 'camouflage' is explained in terms of archaeology, anthropology, art history, psychology, philosophy, archaeo-astronomy, esoterica and spirituality. Readers will never look at art, artists or culture as a cumulative, learned or evolved craft again.

Dictionary of Steroids R.A. Hill,H.L.J. Makin,D.N. Kirk,G.M. Murphy,1991-05-23 This dictionary, the first extensive compilation since Fieser's Steroids in 1959, is one of a uniform series derived from the Chapman and Hall Chemical Database. For the first time bibliographic, structural and chemical data on over 10,000 of the most important steroids has been brought together to provide an invaluable reference work for chemists working in this field. The dictionary documents all known naturally occurring steroids (sterols, bile acids, sapogenins, cardanolides, bufanolides, steroidal alkaloids) and an extensive selection of the most important synthetic and semisynthetic steroids. The presentation of data is uniform with the established Dictionary of organic compounds, fifth edition, with accurately drawn diagrams showing stereochemistry and comprehensive, labelled bibliographies giving rapid access to primary literature sources. A small proportion of entries are based on entries in the Dictionary of organic compounds which have been substantially expanded and brought up to date with references to the recent literature (coverage up to August 1990). The majority are wholly new with particularly strong natural product coverage. Access to this information is provided by name, molecular formula, CAS registry number, type of compound, and species indexes--which comprise Volume 2.
