Foreign Exchange Option Pricing Iain J. Clark,2011-01-18 This book covers foreign exchange options from the point of view of the finance practitioner. It contains everything a quant or trader working in a bank or hedge fund would need to know about the mathematics of foreign exchange—not just the theoretical mathematics covered in other books but also comprehensive coverage of implementation, pricing and calibration. With content developed with input from traders and with examples using real-world data, this book introduces many of the more commonly requested products from FX options trading desks, together with the models that capture the risk characteristics necessary to price these products accurately. Crucially, this book describes the numerical methods required for calibration of these models – an area often neglected in the literature, which is nevertheless of paramount importance in practice. Thorough treatment is given in one unified text to the following features: Correct market conventions for FX volatility surface construction Adjustment for settlement and delayed delivery of options Pricing of vanillas and barrier options under the volatility smile Barrier bending for limiting barrier discontinuity risk near expiry Industry strength partial differential equations in one and several spatial variables using finite differences on nonuniform grids Fourier transform methods for pricing European options using characteristic functions Stochastic and local volatility models, and a mixed stochastic/local volatility model Three-factor long-dated FX model Numerical calibration techniques for all the models in this work The augmented state variable approach for pricing strongly path-dependent options using either partial differential equations or Monte Carlo simulation Connecting mathematically rigorous theory with practice, this is the essential guide to foreign exchange options in the context of the real financial marketplace.

Annual Report on Exchange Arrangements and Exchange Restrictions 2012 International Monetary Fund. Monetary and Capital Markets Department,2012-09-14 Published since 1950, this authoritative annual reference is based on a unique IMF database that tracks exchange and trade arrangements for 187 IMF member countries, along with Hong Kong SAR, Aruba, and Curaçao and Sint Maarten. The Annual Report on Exchange Arrangements and Exchange Restrictions (AREAER) draws together information available to the IMF from a number of sources, including during official IMF staff visits to member countries. There is a separate chapter for each of the 189 countries included, and these are presented in a clear, easy-to-read tabular format. A summary table allows for simple cross-country comparisons of key features of their exchange and trade regimes. The report's introduction summarizes recent global trends and developments. It discusses such topical issues as exchange rate arrangements, current or capital transactions, or prudential regulations. The individual country chapters outline exchange measures in place, the structure and setting of exchange rates, arrangements for payments and receipts, procedures for resident and nonresident accounts, mechanisms for import and export payments and receipts, controls on capital transactions, and provisions specific to the financial sector. The report now provides more detailed information on the operations of foreign exchange markets and exchange rate mechanisms and better describes the regulatory framework for current and capital account transactions.
