Box Boats Brian J. Cudahy, 2007-12 Fifty years ago--on April 26, 1956--the freighter Ideal X steamed from Berth 26 in Port Newark, New Jersey. Flying the flag of the Pan-Atlantic Steamship Company, she set out for Houston with an unusual cargo: 58 trailer trucks lashed to her top deck. But they weren't trucks--they were steel containers removed from their running gear, waiting to be lifted onto empty truck beds when Ideal X reached Texas. She docked safely, and a revolution was launched--not only in shipping, but in the way the world trades. Today, the more than 200 million containers shipped every year are the lifeblood of the new global economy. They sit stacked on thousands of box boats that grow more massive every year. In this fascinating book, transportation expert Brian Cudahy provides a vivid, fast-paced account of the container-ship revolution--from the maiden voyage of the Ideal X to the entrepreneurial vision and technological breakthroughs that make it possible to ship more goods more cheaply than ever before. Cudahy tells this complex story easily, starting with Malcom McLean, Pan-Atlantic's owner who first thought about loading his trucks on board. His line grew into the container giant Sea-Land Services, and Cudahy charts its dramatic evolution into Maersk Sealand, the largest container line in

the world. Along the way, he provides a concise, colorful history of world shipping--from freighter types to the fortunes of steamship lines--and explores the spectacular growth of global trade fueled by the mammoth ships and new seaborne lifelines connecting Asia, Europe, and the Americas. Masterful maritime history, *Box Boats* shows how fleets of these ungainly ships make the modern world possible--with both positive and negative effects. It's also a tale of an historic home port, New York, where old piers lie silent while 40-foot steel boxes of toys and televisions come ashore by the thousands, across the bay in New Jersey.

**Sailing into History** Frank Boles, 2017-01-01 The Great Lakes create a vast transportation network that supports a massive shipping industry. In this volume, seamanship, cargo, competition, cooperation, technology, engineering, business, unions, government decisions, and international agreements all come together to create a story of unrivaled interest about the Great Lakes ships and the crews that sailed them in the twentieth century. This complex and multifaceted tale begins in iron and coal mines, with the movement of the raw ingredients of industrial America across docks into ever larger ships using increasingly complicated tools and technology. The shipping industry was an expensive challenge, as it required huge investments of capital, caused bitter labor disputes, and needed direct government intervention to literally remake the lakes to accommodate the ships. It also demanded one of the most integrated international systems of regulation and navigation in the world to sail a ship from Duluth to upstate New York. *Sailing into History* describes the fascinating history of a century of achievements and

setbacks, unimagined change mixed with surprising stability.

**Ninety Percent of Everything** Rose George,2013-08-13 Revealing the workings and dangers of freight shipping, which is the key to our economy, environment and civilization, the author sails from Rotterdam to Suez to Singapore to present an eye-opening glimpse into an overlooked world filled with suspect practices, dubious operators and pirates.

*Freight Tricycle Operations in New York City* ,2014 As cities become more congested and increasingly focused on sustainability, cargo cycles offer a potential alternative to motorized vehicles for local and last-mile goods delivery. However, few studies have examined this mode in the North American context. This project seeks to address this existing gap in research on cargo cycles/freight tricycles in North America and in New York City (NYC). The goals of this project are: (1) to understand the potential commodities moved and sectors served by cargo cycles; (2) to identify the expected benefits, challenges, and barriers to operation for cargo cycles operating in NYC; (3) to understand freight tricycle traffic performance in NYC conditions; and (4) to understand the capability of cargo cycles for use in cold chains--such as food and pharmaceutical delivery--that require temperature control.
