Through the Valley William Reeder Jr., 2016-04-15 *Through the Valley* is the captivating memoir of the last U.S. Army soldier taken prisoner during the Vietnam War. A narrative of courage, hope, and survival, *Through the Valley* is more than just a war story. It also portrays the thrill and horror of combat, the fear and anxiety of captivity, and the stories of friendships forged and friends lost. In 1971 William Reeder was a senior captain on his second tour in Vietnam. He had flown armed, fixed-wing OV-1 Mohawks on secret missions deep into enemy territory in Laos, Cambodia, and North Vietnam on his first tour. He returned as a helicopter pilot eager to experience a whole new perspective as a Cobra gunship pilot. Believing that Nixon's Vietnamization would soon end the war, Reeder was anxious to see combat action. To him, it appeared that the Americans had prevailed, beaten the Viet Cong, and were passing everything over to the South Vietnamese Army so that Americans could leave. Less than a year later, while providing support to forces at the besieged base of Ben Het, Reeder's chopper went down in a flaming corkscrew. Though Reeder survived the crash, he was captured after evading the enemy for three days. He was held for weeks in jungle cages before enduring a grueling forced march on the Ho Chi Minh Trail, costing the lives of seven of his group of twenty-seven POWs. Imprisoned in the notorious prisons of Hanoi, Reeder's tenacity in the face of unimaginable hardship is not only a captivating story, but serves as an inspiration to all. In *Through the Valley* William Reeder shares the torment and pain of his ordeal, but does so in the light of the hope that he never lost. His memoir reinforces the themes of courage and sacrifice, undying faith, strength of family, love of country, loyalty among comrades, and a realization of how precious is the freedom all too often taken for granted. Sure to resonate with those serving in the armed forces who continue to face the demands of combat, *Through the Valley* will also appeal especially to readers looking for a powerful, riveting story.

Network Centric Operations Clay Wilson,2011-04-15 Network Centric Operations (NCO; also known as Network Centric Warfare) is a key component of Dept. of Defense (DOD) planning for transformation of the military. NCO relies on computer equipment and networked communications technology to provide a shared awareness of the battle space for U.S. forces. Proponents say that a shared awareness increases synergy for command and control, resulting in superior decision-making, and the ability to coordinate complex military operations over long distances for an overwhelming war-fighting advantage. NCO technology saw limited deployment in Afghanistan and, more recently, increased deployment in Operation Iraqi Freedom (OIF). This report, issued in 2007, provides background information and discusses possible oversight issues for Congress regarding DOD's strategy for implementing NCO, which formed a central part of the Bush Administration's plans for defense transformation. This is a print on demand report.

The Colour Image Processing Handbook Stephen J. Sangwine,Robin E.N. Horne,2012-12-06 This book is aimed at those using colour image processing or researching new applications or techniques of colour image processing. It has been clear for some time that there is a need for a text dedicated to colour. We foresee a great increase in the use of colour over the coming years, both in research and in industrial and commercial applications. We are sure this book will prove a useful reference text on the subject for practicing engineers and scientists, for researchers, and for students at doctoral and, perhaps masters, level. It is not intended as an introductory text on image processing, rather it assumes that the reader is already familiar with basic image processing concepts such as image representation in digital form, linear and non-linear filtering, trans forms, edge detection and segmentation, and so on, and has some experience with using, at the least, monochrome equipment. There are many books covering these topics and some of them are referenced in the text, where appropriate. The book covers a restricted, but nevertheless, a very important, subset of image processing concerned with natural colour (that is colour as perceived by the human visual system). This is an important field because it shares much technology and basic theory with colour television and video equipment, the market for which is worldwide and very large; and with the growing field of multimedia, including the use of colour images on the Inter net.
