The Spatial Dimension of Risk Hans-Detlef
Möller-Mahn, 2013 Through its exploration of the
spatial dimension of risk, this book offers a
brand new approach to theorizing risk, and
significant improvements in how to manage,
tolerate and take risks. A broad range of risks
are examined, including natural hazards, climate
change, political violence, and state failure.
Case studies range from the Congo to Central Asia,
from tsunami in Japan and civil war affected areas
in Sri Lanka to avalanche hazards in Austria. In
each of these cases, the authors examine the
importance and role of space in the causes and
differentiation of risk, in how we can
conceptualize risk from a spatial perspective and
in the relevance of space and locality for risk
governance. This new approach - endorsed by Ragnar
Löfstedt and Ortwin Renn, two of the world's

leading and most prolific risk analysts - is essential reading for those charged with studying, anticipating and managing risks.

Information Management: The Organizational Dimension Michael J. Earl, 1996-03-28 This volume is a sequel to Information Management: The Strategic Dimension (OUP 1988), a book which was well received by managers and academics alike. In the last decade, the pervasiveness of information technology (IT) has brought about far-reaching changes in how many managers and specialists work and, indeed, in how we conceptualize the organization. The correspondence between new organizational terminology and the language of IT demonstrates this - networked, virtual and knowledge-based organizations, inter-organizational alliances, distributed organizations and groupware all being examples. For some, IT represents a solution to many organizational and operational problems (including the advocates of Business Process Re-engineering) and the most likely way to improve business performance and gain competitive advantage. At the same time, for many managers and organizations the reality is that the risks, costs, false trails and

difficulties seem to outweigh any immediate tangible advantage. The purpose of this book is to take an informed, dispassionate and constructive look at the challenges of IT and to offer insight, analysis and guidance on the ever changing IT environment, focusing in particular on managerial and organizational issues. These include centralization versus decentralization, relations between users and specialists, managing the IS function, outsourcing versus internal capabilities, project management and systems implementation, and an assessment of Business Process Re-engineering at both the conceptual and empirical level. Section 1 looks at some of the organizational horizons made possible by information technology; the next section tackles some of the challenges that face organizations who want to exploit IT in innovative and strategic ways. Section 3 examines some of the eternal questions of how to organize the IS function. In Section Four the contributors look at various aspects of project management and systems implementation. The next section examines some contemporary management questions on the agendas of Chief Information officers and their IS departments. Michael Earl's postscript integrates the volume through the framework of 'organizational fit'. The book provides an authoritative overview and helpful diagnostics of current information management challenges by some of the leading information systems researchers in Europe and the USA. The volume will be essential reading for management students, consultants, and senior IT professionals. Transdisciplinary Sustainability Studies Katri Huutoniemi, Petri Tapio, 2014-06-05 Arising out of human-environment interaction, sustainability problems resist disciplinary categories and simple solutions. This book offers a fresh approach to practical and methodological concerns in transdisciplinary environmental and sustainability studies. It illustrates methodological means by which researchers, professionals, and decision-makers can address complex environmental issues. While scientific reasoning is mostly guided by disciplinary traditions, transdisciplinary research rests on other cognitive strategies. As it does not have a ready-made stance toward problems, figuring out what the puzzle is and what the answer might look like are crucial aspects of transdisciplinary inquiry. Through examples from environment and sustainability studies, the volume discusses heuristic schemes that can give structure to this exploration. By focusing on heuristics, rather than on methods, concepts, or general guidelines, the book argues that a problem-centered approach often resists the rigor of methodology. Learning from experience provides valuable "rules of thumb", checklists, and other cognitive schemes for making ill-defined problems more tangible. Written by an international team of authors, the chapters draw examples from dealing with issues in environmental protection, transport and climate policy, ecosystem services and disservices, environmental beliefs and attitudes, and more. Together with more theoretically oriented chapters, they show that the intellectual processes needed to tackle complex sustainability problems are as much about heuristic problem solving as they are about methodical work.

New Normal, Radical Shift Neela Bettridge, Philip Whiteley, 2016-04-29 Our traditional ways of

looking at economics, business and politics are not fit for purpose. The causes of the recent crisis were behavioural and international, but our measures are superficial and financial, recorded at a national or company level. This is combined with a fervent quest for endless 'growth', no matter how unsustainable. Theory has to catch up with reality. Many books chart different courses for economic and business management but *New Normal, Radical Shift* is different. Using examples from international organizations around the world, it analyses not only the business model that failed, but challenges wider economic and political beliefs that employees' interests always conflict with those of managers and business owners. Neela Bettridge and Philip Whiteley argue that the right messages about good practice in business struggle to be heard, not because of indifference or inertia, but because dysfunctional philosophies are still supported not only within business and business schools, but also within political circles and by trade unions, NGOs and others campaigning for workers' rights. The central belief of the 'old normal' is that profits are made by exploiting workers and the environment. In this book the authors' arguments - all supported by exemplary case studies - demonstrate that this belief is false, opening up enormous possibilities in a 'new normal' of enhanced working lives, environmental protection and business success.

European Universities in Transition Carmelo Mazza,Paolo Quattrone,Angelo Riccaboni,2008-01-01
This attractively presented edited collection is a welcome analysis of issues facing universities. It consists of 14 chapters by experts who work in university management and economics departments. . . this is an excellent collection. Its value stems from the fact that it enables comparisons to be

made and to see that globally the traditional university system is being seriously challenged. The authors in this collection provide a range of perspectives on how the universities in their various locations can begin to respond to these challenges. Anthony Potts, *Journal of Educational Administration and History* The future of the university, this old European institution, is of utmost interest not only to university students and teachers, but to whole societies; not only in Europe, but in the whole world, as the institution has become global. Nobody can predict it, but the editors of this volume were able to ask incisive questions and collected thoughtful and provocative answers, which can contribute to the debate on the fate of universities in a significant way. Barbara Czarniawska, University of Gothenburg, Sweden While acknowledging the value of better university management, this book resists the idea that an externally imposed standardization and a more homogenous European system of higher education adds up to a desiderata. On the contrary the book editors argue that the persistence of the university and its survival in the future is aided by differences between universities. European Universities in Transition is must reading for students of higher education reform. Francisco O. Ramirez, Stanford University, US This timely and important book provides a critical analysis of the changes and challenges that currently affect European universities. Using both theoretical contributions and applied case studies, leading experts argue that universities as institutions are in need of change although the routes that the process may take are heterogeneous. The authors debate whether the reform of universities suffers from the undue influence of generalisations that do not stand up to scrutiny. It is simply too narrow to focus on strategies such as imitating a university model , hoping that best practices will

solve the inefficiencies of the organisation as a whole, or relying on the presence of few external individuals on the universities board to save the difficult relationships between the university and the surrounding economy and society. These ideas ignore the diversity of universities geographically and historically. Above all, they underestimate the power that such diversity holds in making universities survive across centuries. Researchers with an interest in university reform will appreciate this important contribution to the debate, whilst policymakers and university administrators will find this book invaluable in understanding the changes and problems facing European universities and gaining insights on possible solutions.

The Routledge Companion to Banking Regulation and Reform Ismail Ertürk, Daniela Gabor, 2016-10-04
The Routledge Companion to Banking Regulation and Reform provides a prestigious cutting edge international reference work offering students, researchers and policy makers a comprehensive guide to the paradigm shift in banking studies since the historic financial crisis in 2007. The transformation in banking over the last two decades has not been authoritatively and critically analysed by the mainstream academic literature. This unique collection brings together

a multi-disciplinary group of leading authorities in the field to analyse and investigate post-crisis regulation and reform. Representing the wide spectrum of non-mainstream economics and finance, topics range widely from financial innovation to misconduct in banking, varieties of Eurozone banking to reforming dysfunctional global banking as well as topical issues such as off-shore financial centres, Libor fixing, corporate governance and the Dodd-Frank Act. Bringing together an authoritative range of international experts and perspectives, this invaluable body of heterodox research work provides a comprehensive compendium for researchers and academics of banking and finance as well as regulators and policy makers concerned with the global impact of financial institutions.

The Strategy Activation Playbook Aric

Wood, 2022-09-13 Organizations spend over \$160 billion a year hiring consultants to develop and execute strategies, and yet 80 percent of corporate strategies fail. Why? Because we forget the most important factor in successfully executing strategy: People. Our old models of change management and strategy execution assume that organizations are monolithic and can move directly from strategy-making to strategy-doing.

Planning the Development of Builders, Leaders and Managers for 21st-Century Business: Curriculum Review at Columbia Business School N.

Capon, 2012-12-06 Business and management education has an important impact on business practice throughout the world. To a very large extent, possession of the MBA degree is a passport into the upper reaches of management, and CEOs of many major corporations have earned an MBA. It is a reasonable inference that the education received by these leaders and managers during their MBA experience has an important impact on the way that businesses throughout the world are led and

managed and that major corporate decisions are made. The heart of the MBA education is the curriculum, and curriculum design is perhaps the most important strategic function for a business school faculty to undertake. In order to understand the many issues concerning this contemporary curriculum review, this book examines three related contextual domains. First, it details the long-term growth of business and management education. Second, it examines the major theoretical and empirical literatures on organizational evolution and decision making, paying special attention to decision making in institutions of higher education. Finally, the book describes the previous major curriculum review at Columbia Business School in the late 1950s and the subsequent changes that formed the curriculum that was changed in 1992. This book demonstrates what can be achieved by an institution that sets high standards for its business education, and assists faculty and administrators in other schools of business and management as they contemplate revision of their curricula. In addition, it provides a prime example of curriculum design effort in one of the leading institutions worldwide. Finally, it will be of interest to scholars in several different fields, notably, higher education curriculum review, organizational decision making and long-run organizational evolution.
