Recommender Systems Dietmar Jannach,Associate

Professor Markus Zanker,Professor Alexander

Felfernig,Gerhard Friedrich,2014-05-14 This book

introduces different approaches to developing recommender systems that automate choice-making strategies to provide affordable, personal, and high-quality recommendations.

Indirect and Direct Aggression Karin Österman,2010

Indirect and Direct Aggression consists of 24 chapters written by distinguished scholars within the field of aggression research, covering indirect aggression, bullying in schools, adult bullying, and societal and biological aspects of aggression. Indirect aggression is the most typical form of aggression used by women in most cultures. It is an aggressive strategy that is carried out by means of social manipulation that enables the perpetrator to go unnoticed and thereby escape retaliation. Knowledge about indirect aggression and its mechanisms is crucial for all anti-bullying efforts, among children and adults alike. Although briefly covered in early research on human aggression, the study of indirect aggression originates, beginning from the mid-1980s, from a research group in Finland, lead by Professor Kaj Björkqvist of Åbo Akademi University. The book can be used as a textbook at university level.

Group Recommender Systems Alexander

Felfernig,Ludovico Boratto,Martin Stettinger,Marko Tkalčič,2023-11-27 This book discusses different aspects of group recommender systems, which are systems that help to identify recommendations for groups instead of single users. In this context, the authors present different related techniques and applications. The book includes in-depth summaries of group recommendation algorithms, related industrial applications, different aspects of preference construction and explanations, user interface aspects of group recommender systems, and related psychological aspects that play a crucial role in group decision scenarios.

Persuasive Recommender Systems Kyung-Hyan

Yoo,Ulrike Gretzel,Markus Zanker,2012-08-17 Whether users are likely to accept the recommendations provided by a recommender system is of utmost importance to

system designers and the marketers who implement them. By conceptualizing the advice seeking and giving relationship as a fundamentally social process, important avenues for understanding the persuasiveness of recommender systems open up. Specifically, research regarding influential factors in advice seeking relationships, which is abundant in the context of human-human relationships, can provide an important framework for identifying potential influence factors in recommender system context. This book reviews the existing literature on the factors in advice seeking relationships in the context of human-human, human-computer, and human-recommender system interactions. It concludes that many social cues that have been identified as influential in other contexts have yet to be implemented and tested with respect to recommender systems. Implications for recommender system research and design are discussed.

How Students Learn National Research

Council, Division of Behavioral and Social Sciences and Education, Committee on How People Learn: A Targeted Report for Teachers, 2005-01-28 How Students Learn: Science in the Classroom builds on the discoveries detailed in the best-selling How People Learn. Now these findings are presented in a way that teachers can use immediately, to revitalize their work in the classroom for even greater effectiveness. Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward

science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.

How People Learn National Research

Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Developments in the Science of Learning with additional material from the Committee on Learning Research and Educational Practice, 2000-08-11
First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning

actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Technology Enhanced Learning Erik Duval, Mike Sharples, Rosamund Sutherland, 2017-05-11 This book gives an overview of the state-of-the-art in Technology Enhanced Learning (TEL). It is organized as a collection of 14 research themes, each introduced by leading experts and including references to the most relevant literature on the theme of each cluster. Additionally, each chapter discusses four seminal papers on the theme with expert commentaries and updates. This volume is of high value to people entering the field of learning with technology, to doctoral students and researchers exploring the breadth of TEL, and to experienced researchers wanting to keep up with latest developments.
