A Human Error Approach to Aviation Accident Analysis Professor Scott A Shappell, Professor Douglas A Wiegmann, 2012-10-01 This comprehensive book provides the knowledge and tools required to conduct a human error analysis of accidents. Serving as an excellent reference guide for many safety professionals and investigators already in the field.

Chaos, Catastrophe, and Human Affairs Stephen J. Guastello, 2013-05-13 Whether talking about steering a wheelbarrow over rugged terrain or plotting the course of international relations, human performance systems involve change. Sometimes changes are subtle or evolutionary, sometimes they are catastrophic or revolutionary, and sometimes the changes are from periods of relative calm to periods of vibrant oscillations to periods of chaos. As a general rule, more complex systems are likely to produce more complex forms of change. Although social scientists have long acknowledged that change occurs and have considered ways to effect desirable

change, the dynamical processes of change have been poorly understood in the past. This volume combines recent advances in mathematics and experimental design with the best available social science theories to produce a new, integrated, and compact theory of work, organizations, and social evolution. The domains of application extend from human decision-making processes to personnel selection and work motivation, work performance under conditions of stress, accident and health risk analysis, the development of social institutions and economic systems, creativity and innovation, organizational development and group dynamics, and political revolutions and war. Relative to other literature on nonlinear dynamical systems theory (NDS), this book is unique in that it integrates new developments in NDS with substantive psychological theory. It builds on many recent developments in organizational theory to show that nonlinear dynamics were often implicit in those works all along. The result is an entirely new way of viewing social events, understanding change processes, and asking questions about social systems. This book also contains much new empirical work and explains the newly developed methods for testing these new hypotheses.

Complexity Bill McKelvey, John Bragin, 2012-11 A new title from Routledge Major Works, this is a five-volume collection of cutting-edge and canonical research on the applications of complexity science.

The SAGE Handbook of Complexity and Management Peter Allen, Steve Maguire, Bill McKelvey, 2011-04-06 This is the substantive scholarly work to provide a map of the state of art research in the growing field emerging at the intersection of complexity science and management studies.

Emerging Syntheses In Science David Pines, 2018-03-05 Evolution of self-replicating macromolecules through natural selection is a dynamically ordered process. Two concepts are introduced to describe the physical regularity of macromolecular evolution: sequence space and quasi-species. Natural selection means localization of a mutant distribution in sequence space. This localized distribution, called the quasi-species, is centered around a master sequence (or a degenerate set), that the biologist would call the wild-type. The self-ordering of such a system is an essential consequence of its formation through self-reproduction of its macromolecular constituents, a process that in the dynamical equations expresses itself by positive diagonal coefficients called selective values. The theory describes how population numbers of wild type and mutants are related to the distribution of selective values, that is to say, how value topography maps into population topography. For selectively (nearly) neutral mutants appearing in the quasi-species distribution, population numbers are greatly enhanced as compared to those of disadvantageous mutants, even more so in continuous domains of such selectively valuable mutants. As a consequence, mutants far distant from the wild type may occur because they are produced with the help of highly populated, less distant precursors. Since values are cohesively distributed, like mountains on earth, and since their positions are multiply connected in the high-dimensional sequence space, the overpopulation of (nearly) neutral mutants provides guidance for the evolutionary process. Localization in sequence space, subject to a threshold in the fidelity of reproduction, is steadily challenged until an optimal state is reached. The model has been designed according to experimentally determined properties of self-replicating molecules. The conclusions reached from the theoretical models can be used to construct machines that provide optimal conditions for the evolution of functional macromolecules.

Power Laws in the Information Production Process Leo Egghe, 2005-01-20 Explains numerous informetric regularities based on a decreasing power law as size-frequency function, i.e. Lotka's law. It revives the historical formulation of Alfred Lotka of 1926 and shows the power of this power law, both in classical aspects of informetrics (libraries, bibliographies) and in 'new' applications such as

social networks.

Chaos Theory in the Social Sciences L. Douglas Kiel, Euel W. Elliott, 2009-11-10 Chaos Theory in the Social Sciences: Foundations and Applications offers the most recent thinking in applying the chaos paradigm to the social sciences. The book explores the methodological techniques--and their difficulties--for determining whether chaotic processes may in fact exist in a particular instance and examines implications of chaos theory when applied specifically to political science, economics, and sociology. The contributors to the book show that no single technique can be used to diagnose and describe all chaotic processes and identify the strengths and limitations of a variety of approaches. The essays in this volume consider the application of chaos theory to such diverse phenomena as public opinion, the behavior of states in the international arena, the development of rational economic expectations, and long waves. Contributors include Brian J. L. Berry, Thad Brown, Kenyon B. DeGreene, Dimitrios Dendrinis, Euel Elliott, David Harvey, L. Ted Jaditz, Douglas Kiel, Heja Kim, Michael McBurnett, Michael Reed, Diana Richards, J. Barkley Rosser, Jr., and Alvin M. Saperstein. L. Douglas Kiel and Euel W. Elliott are both Associate Professors of Government, Politics, and Political Economy, University of Texas at Dallas.

Latin American Economic Outlook 2017 Youth, Skills and Entrepreneurship OECD, CAF Development Bank of Latin America, United Nations Economic Commission for Latin America and the Caribbean, 2016-10-29 The 2017 edition of the Latin American Economic Outlook explores youth, skills and entrepreneurship. Young Latin Americans embody the region's promise and perils. They stand at the crossroads of a region whose once promising economy and social progress is now undergoing a slowdown.

Handbook of Research Methods in Complexity Science Eve Mitleton-Kelly, Alexandros Paraskevas, Christopher Day, This comprehensive Handbook is aimed at both academic researchers and practitioners in the field of complexity science. The book's 26 chapters, specially written by leading experts, provide in-depth coverage of research methods based on the sciences of complexity. The research methods presented are illustratively applied to practical cases and are readily accessible to researchers and decision makers alike.

Postmodernism and Management Edwin A. Locke, 2003-12-31 Postmodern philosophy has had a profound effect on intellectuals throughout the world. Its influence has seeped into many fields other than philosophy including literature, psychology, sociology, political science, history, journalism and management. However, there is a debate within the intellectual community as to whether this influence has been beneficial or harmful with no resolution yet in sight. This book contributes to the debate within the field of management. The book includes four chapters by the most highly regarded pro postmodern scholars and an equal number of chapters by the most highly regarded anti postmodern scholars. Adding to the controversy is a final chapter which argues that Ayn Rand's philosophy of objectivism is the proper alternative to postmodernism.

On Complexity Edgar Morin, 2008 This volume contains some key essays by French thinker Edgar Morin on the subject of complexity, and specifically on what Morin calls complex thought.--Pub. desc.

The Internet of Things , 2021-07-15 As the number of digital devices used in daily life grows, it comes as no surprise that the next step in technological evolution is to conveniently interconnect these devices. This is where the Internet of Things fits in. The Internet of Things refers to all devices that are connected to the internet and share data on it, but there are numerous applications for this technology, ranging from smartphones to driverless cars. Despite the convenience smart devices offer, they also raise significant

concerns about data privacy and security. Readers will encounter contrasting viewpoints on this timely and evolving issue.
