Long-Term Conditions Sue Randall, Helen Ford, 2011-11-28 Long Term Conditions is a comprehensive textbook for all nursing and healthcare students and practitioners that explores the key issues surrounding caring for patients with chronic diseases or long-term conditions. Divided into three sections, this book explores living with a long-term condition, empowerment, and care management. Rather than being disease-focused, it looks at key issues and concepts which unify many different long-term conditions, including psychological and social issues that make up a considerable part of living with a long-term condition. Within each of the chapters, issues of policy, culture and ethics are intertwined, and case studies are used throughout, linking the concepts to specific diseases. Key features: A comprehensive textbook on the principles and practice of caring for people with long-term conditions User-friendly in style with learning outcomes, further reading, useful websites, and case studies throughout linking to specific conditions Moves away from a disease-focused medical model, and takes a needs-led approach Uniquely explores the overarching issues of living with one or more long-term conditions Focuses on the importance of multi-disciplinary team work and collaborative teamwork in the management of long-term conditions

**The Terminal Classic in the Maya Lowlands** Arthur Andrew Demarest,Prudence M. Rice,Don Stephen Rice,2004 This book revisits one of the great problems in Mayan archaeology -- the apparent collapse of Classic Maya civilisation from roughly AD830-950. During this period the Maya abandoned their power centres in the southern lowlands and rather abruptly ceased the distinctive cultural practices that marked their apogee in the Classic period. Archaeological fieldwork during the past three decades, however, has uncovered enormous regional variability in the ways the Maya experienced the shift from Classic to Post-classic society, revealing a period of cultural change more complex than acknowledged by traditional models. Featuring an impressive roster of scholars, the book presents the most recent data and interpretations pertaining to this perplexing period of cultural transformation in the Maya

lowlands. Although the research reveals clear interregional patterns, the contributors resist a single overarching explanation. Rather, this volume's diverse and nuanced interpretations provide a new, more properly grounded beginning for continued debate on the nature of lowland Terminal Classic Maya civilisation.

*Lakes on Mars* Nathalie A. Cabrol, Edmond A. Grin, 2010-09-15 On Earth, lakes provide favorable environments for the development of life and its preservation as fossils. They are extremely sensitive to climate fluctuations and to conditions within their watersheds. As such, lakes are unique markers of the impact of environmental changes. Past and current missions have now demonstrated that water once flowed at the surface of Mars early in its

history. Evidence of ancient ponding has been uncovered at scales ranging from a few kilometers to possibly that of the Arctic ocean. Whether life existed on Mars is still unknown; upcoming missions may find critical evidence to address this question in ancient lakebeds as clues about Mars' climate evolution and its habitability potential are still preserved in their sedimentary record. *Lakes on Mars* is the first review on this subject. It is written by leading planetary scientists who have dedicated their careers to searching and exploring the questions of water, lakes, and oceans on Mars through their involvement in planetary exploration, and the analysis of orbital and ground data beginning with Viking up to the most recent missions. In thirteen chapters, *Lakes on Mars* critically discusses new data and explores the role that water played in the evolution of the surface of Mars, the past hydrological provinces of the planet, the possibility of heated lake habitats through enhanced geothermal flux associated with volcanic activity and impact cratering. The book also explores alternate hypotheses to explain the geological record. Topographic, morphologic, stratigraphic, and mineralogic evidence are presented that suggest successions of ancient lake environments in Valles Marineris and Hellas. The existence of large lakes and/or small oceans in Elysium and the Northern Plains is supported both by the global distribution of deltaic deposits and by equipotential surfaces that may reflect their past margins. Whether those environments were conducive to life has yet to be demonstrated but from comparison with our

planet, their sedimentary deposits may provide the best opportunity to find its record, if any. The final chapters explore the impact of climate variability on declining lake habitats in one of the closest terrestrial analogs to Mars at the Noachian/Hesperian transition, identify the geologic, morphologic and mineralogic signatures of ancient lakes to be searched for on Mars, and present the case for landing the Mars Science Laboratory mission in such an environment. First review on the subject by worldwide leading authorities in the field New studies with most recent data, new images, figures, and maps Most recent results from research in terrestrial analogs

It provides a comprehensive overview of key trends and issues in the field, drawing upon the full range of social science disciplines. The Handbook is organized into five parts, each exploring different aspects of research into social aspects of ageing: \* Disciplinary overviews: summaries of findings from key disciplinary areas within social gerontology \* Social relationships and social differences: topics include: social inequality, gender and ageing, the role of religion, inter-generational ties, social networks, and friendships in later life. \* Individual characteristics and change in later life: chapters in this section examine different aspects of individual aging, including self and identity, cognitive processes, and

biosocial interactions and their impact on physical and psychological aging.

- \* Comparative perspectives and cultural innovations: topics in this section include: ageing and development, ageing in a global context, migration, and cross-cultural perspectives on grandparenthood.
- \* Policy issues: The final section examines some of the main policy concerns affecting older people across the world. Topics include: developments in social policy, long-term care, technology and older people, end of life issues, work and retirement, crime and older people, and the politics of old age. This will be essential reading for all students, researchers and policy-makers concerned with the major issues influencing the lives of older people across the globe.

**Landscapes and Landforms of Ethiopia** Paolo Billi, 2015-03-23 This book provides a succinct but comprehensive presentation of key geomorphological locations and topics including information about geomorphological heritage and maps to visit the most important sites. Apart from often being remarkably scenic, landscapes reveal stories that often can be traced back in time tens of million years and include unique events. This is particularly true for Ethiopia where spectacular examples of different landforms are present. Its geomorphology varies from highlands, marked by high volcanoes and incised by deep river gorges, to the rift valley lakes endorheic systems and the below sea level lowlands with characteristic landscapes which are unique in the world. Landscapes and Landforms of Ethiopia highlights all these topics including essential information about geology and tectonic framework, past

and present climate, hydrology, geographical regions and long-term geomorphological history. It is a highly informative book, providing insight for readers with an interest in geography and geomorphology.

**Ancient Methone, 2003-2013** Sarah P. Morris, John K Papadopoulos, 2023-12-31  
Excavations at ancient Methone since 2003 by the Greek Ministry of Culture have uncovered remains from the Late Neolithic period through the fourth-century B.C. destruction by Philip II of Macedon. These discoveries extend the history of the city, a colony of Eretria (Euboia) since the late eighth century B.C., by nearly three thousand years into Greek prehistory. This volume presents results of the project in selected artefacts, burials, and structures representing the chief phases of the city, in chronological order. An introduction covers historical sources, excavations from 2003 to 2013, and the unique location of Methone. Part I details the prehistoric settlement at Methone, from the fourth millennium to 1000 B.C., and the Bronze Age burials. Part II focuses on the copious artifacts and ecofacts from the Early Iron Age Hypogeion shaft. Part III presents artifacts and architecture from the Archaic and Classical periods, through the final days of the siege of the city in 354 B.C. The significance of this work lies in its interdisciplinary methods, combining stylistic analysis of artifacts and source-critical philology with natural history, bioarchaeology, materials analysis, and geochemistry, whose results reveal the long-term history of a site crucial to the economic and political history of Classical Greece and the north Aegean.

International Perspectives on Public Health and Palliative Care Libby Sallnow,Suresh Kumar,Allan Kellehear,2013-07-03 Public health approaches to palliative care have been growing in policy importance and practice acceptance. This innovative volume explores the major concepts, practice examples, and practice guidelines for this new approach. The goal of 'comprehensive care' – seamless support for patients as they transition between home based care and inpatient services – relies on the principles of health promotion and community development both to ensure services are available and importantly appropriate for patients' needs. In developing contexts, where hospitals and hospices may be inaccessible, a public health approach provides not only continuity of care but greater access to good end of life care. This book provides both a historical and conceptual overview whilst offering practical case examples from affluent and developing contexts, in a range of clinical settings. Finally, it draws together research-based guidelines for future practice. Essential reading for public health researchers and practitioners with an interest in end of life care and global health as well as those involved in developing palliative care provision, International Perspectives on Public Health and Palliative Care is

the first volume to present an overview of theory and practice in this emerging field.

*Rethinking Colonial Past Through Archaeology* Neal Ferris, Rodney Harrison, Michael V. Wilcox, Michael Vincent Wilcox, 2014 This work explores the archaeologies of daily living left by the indigenous and other displaced peoples impacted by European colonial expansion over the last 600 years. Case studies from North America, Australia, Africa, the Caribbean, and Ireland significantly revise conventional historical narratives of those interactions, their presumed impacts, and their ongoing relevance for the material, social, economic, and political lives and identities of contemporary indigenous and other peoples.

*Dendritic Spines* Alberto A. Rasia-Filho, Maria Elisa Calcagnotto, Oliver von Bohlen und Halbach, 2023-12-16 This reference provides detailed coverage of dendritic spines, the fascinating neuronal components that modulate synaptic transmission, development, strength, and plasticity and are involved in the function of multiple areas of the nervous system. The density, shape, and function of spines may indicate the cellular connectivity and synaptic plasticity in normal and pathological conditions. This field has undergone dramatic advances in terms of techniques and experimental findings from in vitro to in vivo data, from animal models to human neurons, and computational models using artificial intelligence. To address these cutting-edge findings, the book provides state-of-the-art, comprehensive coverage with chapters

written by the leading international researchers in the field. The authors consider the multiple implications for the study of dendritic spines with broad implications in the neurosciences and related areas.
