Old Names - New Growth Peter Bierbaumer, Helmut W. Klug, 2009 For the 2nd ASPNS conference the emphasis regarding the topics of the talks was placed on lexicographic and linguistic matters. In this volume the contributors assess the various problems of working with plant names like foxes glofa and geormanleaf, pulege and psyllium, hlenortear or fornertes folm. A special study analyses the semantic aspects of Old English plant names. More generally plant related discussions deal with the mandrake legend in Anglo-Saxon England and continental Europe, the need for a new publication of the Old English Herbarium and of the Medicina de Quadrupedibus, or the tree names in Anglo-Saxon charters. The conference also served as a platform to introduce the Graz-Munich online project Dictionary of Old English Plant Names.

Practical Image and Video Processing Using MATLAB Oge Marques, 2011-08-04 UP-TO-DATE, TECHNICALLY ACCURATE COVERAGE OF ESSENTIAL TOPICS IN IMAGE AND VIDEO PROCESSING This is the first book to combine image and video processing with a practical MATLAB®-oriented approach in order to demonstrate the most important image and video techniques and algorithms. Utilizing minimal math, the contents are presented in a clear, objective manner, emphasizing and encouraging experimentation. The book has been organized into two parts. Part I: Image Processing begins with an overview of the field, then introduces the fundamental concepts, notation, and terminology associated with image representation and basic image processing operations. Next, it discusses MATLAB® and its Image Processing Toolbox with the start of a series of chapters with hands-on activities and step-by-step tutorials. These chapters cover image acquisition and digitization; arithmetic, logic, and geometric operations; point-based, histogram-based, and neighborhood-based image enhancement techniques; the Fourier Transform and relevant frequency-domain image filtering techniques; image restoration; mathematical morphology; edge detection techniques; image segmentation; image compression and coding; and feature extraction and representation. Part II: Video Processing presents the main concepts and terminology associated with analog video signals and systems, as well as digital video formats and standards. It then describes the technically involved problem of standards conversion, discusses motion estimation and compensation techniques, shows how video sequences can be filtered, and concludes with an example of a solution to object detection and tracking in video sequences using MATLAB®. Extra features of this book include: More than 30 MATLAB® tutorials, which consist of step-by-step guides to exploring image and video processing techniques using MATLAB® Chapters supported by figures, examples, illustrative problems, and exercises Useful websites and an extensive list of bibliographical references This accessible text is ideal for upper-level undergraduate and graduate students in digital image and video processing courses, as well as for engineers, researchers, software developers, practitioners, and anyone who wishes to learn about these increasingly popular topics on their own.

Lexical Creativity, Texts and Contexts Judith Munat, 2007-11-06 The coining of novel lexical items and the creative manipulation of existing words and expressions is heavily dependent on contextual factors, including the semantic, stylistic, textual and social environments in which they occur. The twelve specialists contributing to this collection aim to illuminate creativity in word formation with respect to functional discourse roles, but also examine 'critical creativity' determined by language policy, as well as diachronic phonetic variation in creatively-coined words. The data, based either on large corpora or smaller hand-collected samples, is drawn from advertising, the daily press, electronic communication, literature, spoken interaction, cartoons, lexical ontologies and style guides. The coining of novel lexical items and the creative manipulation of existing words and expressions is heavily dependent on contextual factors, including the semantic, stylistic, textual and social environments in which they occur. The twelve specialists contributing to this collection aim to illuminate creativity in word formation with respect to functional discourse roles, but also examine 'critical creativity' determined by language policy, as well as diachronic phonetic variation in creatively-coined words. The data, based either on large corpora or smaller hand-collected samples, is drawn from advertising, the daily press, electronic communication, literature, spoken interaction, cartoons, lexical ontologies and style guides. Each study analyses novel formations in relation to their contexts of use and inevitably leads to the crucial question of creativity vs. productivity. By focussing on creative lexical formations at the level of parole, these studies provide insights into morphological theory at the level of langue, and ultimately seek to explain lexical creativity as a function of language use.

E-Business Essentials Nick Bontis, 2004-09-01 This special issue of QJEC marks the final instalment of the journal. The QJEC has had a long-standing history of international scholarship focused on the emerging field of electronic commerce with a broad, interdisciplinary approach. It has established the field's intellectual foundation with state-of-the-art research from business, computer science, engineering, law, psychology, and sociology. This particular issue focuses on an eclectic group of papers that are international in scope with authors from Canada, Australia, France, Germany, South Africa and Italy. The papers range in topics from valuing dot com companies, to mobile health and portals, to supply chain management.

Computer Concepts and C Programming P.B. Kotur, 2013-05-24 The book "Computer Concepts and C Programming" is designed to help the Engineering students of all Indian Universities. This book is written as per the new syllabus of the Visveswaraiah Technological University, Belgaum, India and it satisfies all the requirements of I/II semester students who aspire to learn the fundamentals of computers and C Programming. C is a structured programming language. This is most popular and a very powerful programming language. It is standardized and portable across multiple operating systems. C has been the most sought after programming language for developing the system software such as device drivers, compilers, parts of operating systems, interpreters for languages like Java, Prolog, etc. Among other popular programming languages like C++, Java and C#, C retained its position in software development activities. This book provides more than 100 example programs. All these programs are executed and tested on Borland C++ compiler and with the vi editor on UNIX. All the laboratory assignments are provided in Appendix-A. There are 150 multiple choice questions given for the readers to test their knowledge of C language.

Triadic Chromatic Approach George Garzone, 2020-04-03 This book Chromatic Lines Over Standard Tune Chord Progressions is designed to free the improviser from the normal sounds that he or she usually plays. All the compositions are based off on the Triadic Chromatic Approach concept, so you will get a clear example of the sound itself from the combination of the Triadic Chromatic Approach and the standard progressions. For all Bb, Eb, C and Bass instruments. You will find in this book compositions and exercises with chromatic lines.

Triadic Chromatic Approach George Garzone, 2020-04-04 You will find the development of the Triadic Chromatic Approach, applied to the diminished and augmented triads. With this book you will get the explanation, the examples, the exercises and the audios and videos. In my eyes, the augmented and the diminished portion of the triadic approach are the most open and creative sound to my ears. Through these two triads you will be able to escape the world of traditional sounds and patterns. For use for all Bb, Eb C & bass instruments.
