**CLIP, STAMP, FOLD** BEATRIZ COLOMINA,2021-04-29 An explosion of little architectural magazines in the 1960s and 1970s instigated a radical transformation in architectural culture, as the magazines acted as a site of innovation and debate. Clip/Stamp/Fold takes stock of seventy little magazines from this period. The book brings together a remarkable range of documents and original research which the project has produced during its continuous travels over the last four years starting with the exhibition at the Storefront in November 2006. The book features transcripts from the “Small Talks” events in which editors and designers were invited to discuss their magazines; a stocktaking of over 100 significant issues that tracks the changing density and progression of the little magazine phenomenon; transcripts of more than forty interviews with magazine editors and designers from all over the world; a selection of magazine facsimiles; and a fold out poster that offers a mosaic image of more than 1,200 covers examined during the research.

AI 2003: ADVANCES IN ARTIFICIAL INTELLIGENCE TAMAS D. GEDEON,LANCE C.C. FUNG,2003-12-01 Consider the problem of a robot (algorithm, learning mechanism) moving along the real line attempting to locate a particular point  $p$ . To assist the mechanism, we assume that it can communicate with an environment (“Oracle”) which guides it with information regarding the direction in which it should go. If the environment is deterministic the problem is the “Deterministic Point Location Problem” which has been studied rather thoroughly [1]. In its pioneering version [1] the problem was presented in the setting that the environment could charge the robot a cost which was proportional to the distance it was from the point sought for. The question of having multiple communicating robots locate a point on the line has also been studied [1, 2]. In the stochastic version of this problem, we consider the scenario when the learning mechanism attempts to locate a point in an interval with stochastic (i.e., possibly erroneous) instead of deterministic responses from the environment. Thus when it should really be moving to the “right” it may be advised to move to the “left” and vice versa. Apart from the problem being of importance in its own right, the stochastic pointlocationproblemalsohas potentialapplications insolvingoptimization problems. Inmanyoptimizationsolutions—for exampleinimageprocessing, pattern recognition and neural computing [5, 9, 11, 12, 14, 16, 19], the algorithm worksits wayfromits currentsolutionto the optimal solutionbasedoninformation that it currentlyhas. A crucialquestionis oneof determining the parameter whichtheoptimizationalgorithmshoulduse.
