The Untold History of the Celts Martin J. Dougherty,2016-07-15 Before the Vikings, before the Anglo-Saxons, before the Roman Empire, the Celts dominated central and western Europe. Today we might think of the Celts only inhabiting parts of the far west of Europe ⬚Ireland, Great Britain, France and Spain ⬚but these were the extremities in which their culture lasted longest. In fact, they had originated in Central Europe and settled as far afield as present day Turkey, Poland and Italy. From their emergence as an Iron Age people around 800 BC to the early centuries AD, Celts reveals the truth behind the stories of naked warriors, ritual beheadings, druids, magic and accusations of human sacrifice. The book examines the different tribes, the Hallstatt and La Tène periods, as well as Celtic survival in western Europe, the Gallic Wars, military life, spiritual life, slavery, sexuality and Celtic art.

Description of Input and Examples for Phreeqc Version 3 David L. Parkhurst,C. A..j. Apello,2014-07-17 PHREEQC version 3 is a computer program written in the C and C++ programming languages that is designed to perform a wide variety of aqueous geochemical calculations. PHREEQC implements several types of aqueous models: two ion-association aqueous models (the Lawrence Livermore National Laboratory model and WATEQ4F), a Pitzer specific-ion-interaction aqueous model, and the SIT (Specific ion Interaction Theory) aqueous model. Using any of these aqueous models, PHREEQC has capabilities for (1) speciation and saturation-index calculations; (2) batch-reaction and one-dimensional (1D) transport calculations with reversible and irreversible reactions, which include aqueous, mineral, gas, solid-solution, surface-complexation, and ion-exchange equilibria, and specified mole transfers of reactants, kinetically controlled reactions, mixing of solutions, and pressure and temperature changes; and (3) inverse modeling, which finds sets of mineral and gas mole transfers that account for differences in composition between waters within specified compositional uncertainty limits.
