**Practical UML Statecharts in C/C++** Miro Samek,2008-10-03 Practical UML Statecharts in C/C++ Second Edition bridges the gap between high-level abstract concepts of the Unified Modeling Language (UML) and the actual programming aspects of modern hierarchical state machines (UML statecharts). The book describes a lightweight, open source, event-driven infrastructure, called QP that enables direct manual coding UML statecharts and concurrent event-driven applications in C or C++ without big tools. This book is presented in two parts. In Part I, you get a practical description of the relevant state machine concepts starting from traditional finite state automata to modern UML state machines followed by state machine coding techniques and state-machine design patterns, all illustrated with executable examples. In Part II, you find a detailed design study of a generic real-time framework indispensable for combining concurrent, event-driven state machines into robust applications. Part II begins with a clear explanation of the key event-driven programming concepts such as inversion of control ( Hollywood Principle ), blocking versus non-blocking code, run-to-completion (RTC) execution semantics, the importance of event queues, dealing with time, and the role of state machines to maintain the context from one event to the next. This background is designed to help software developers in making the transition from the traditional sequential to the modern event-driven programming, which can be one of the trickiest paradigm shifts. The lightweight QP event-driven infrastructure goes several steps beyond the traditional real-time

operating system (RTOS). In the simplest configuration, QP runs on bare-metal microprocessor, microcontroller, or DSP completely replacing the RTOS. QP can also work with almost any OS/RTOS to take advantage of the existing device drivers, communication stacks, and other middleware. The accompanying website to this book contains complete open source code for QP, ports to popular processors and operating systems, including 80x86, ARM Cortex-M3, MSP430, and Linux, as well as all examples described in the book.

**Freedom in the World 2013** Freedom House, 2013-10-10 Freedom in the World, the Freedom House flagship survey whose findings have been published annually since 1972, is the standard-setting comparative assessment of global political rights and civil liberties. The survey ratings and narrative reports on 194 countries and 14 territories are used by policymakers, the media, international corporations, civic activists, and human rights defenders to monitor trends in democracy and track improvements and setbacks in freedom worldwide.

**Synchronous Programming of Reactive Systems** Nicolas Halbwachs, 1992-12-31 This book will attempt to give a first synthesis of recent works concerning reactive system design. The term reactive system has been introduced in order to avoid the ambiguities often associated with the term real-time system, which, although best known and more suggestive, has been given so many different meanings that it is almost inevitably misunderstood. Industrial process control systems, transportation control and supervision systems, signal-processing systems, are examples of the systems we have in mind. Although these systems are more and more computerized, it is surprising to notice that the problem of time in computer science has been studied only recently by pure computer scientists. Until the early 1980s, time problems were regarded as the concern of

performance evaluation, or of some (unjustly scorned) industrial computer engineering, or, at best, of operating systems. A second surprising fact, in contrast, is the growth of research concerning timed systems during the last decade. The handling of time has suddenly become a fundamental goal for most models of concurrency. In particular, Robin Alilner's pioneering works about synchronous process algebras gave rise to a school of thought adopting the following abstract point of view: As soon as one admits that a system can instantaneously react to events, i. e.

*Self-directed multimodal learning in higher education* Jako Olivier, 2020-12-31 This book aims to provide an overview of theoretical and practical considerations in terms of self-directed multimodal learning within the university context. Multimodal learning is approached in terms of the levels of multimodality and specifically blended learning and the mixing of modes of delivery (contact and distance education). As such, this publication will provide a unique snapshot of multimodal practices within higher education through a self-directed learning epistemological lens. The book covers

issues such as what self-directed multimodal learning entails, mapping of specific publications regarding blended learning, blended learning in mathematics, geography, natural science and computer literacy, comparative experiences in distance education as well as situated and culturally appropriate learning in multimodal contexts. This book provides a unique focus on multimodality in terms of learning and delivery within the context of self-directed learning. Therefore, the publication would not only advance the scholarship of blended and open distance learning in South Africa, but also the contribute to enriching the discourse regarding self-direction. From this book readers will get an impression of the latest trends in literature in terms of multimodal self-directed learning in South Africa as well as unique empirical work being done in this regard.

**The Art of Software Security Assessment** Mark Dowd,John McDonald,Justin Schuh,2006-11-20 The Definitive Insider's Guide to Auditing Software Security This is one of the most detailed, sophisticated, and useful guides to software security auditing ever written. The authors are leading security consultants and researchers who have personally uncovered vulnerabilities in applications ranging from sendmail to Microsoft Exchange, Check Point VPN to Internet Explorer. Drawing on their extraordinary experience, they introduce a start-to-finish methodology for "ripping apart" applications to reveal even the most subtle and well-hidden security flaws. The Art of Software Security Assessment covers the full spectrum of software vulnerabilities in both UNIX/Linux and Windows environments. It demonstrates how to audit security in applications of all sizes and functions, including network and Web software. Moreover, it teaches using extensive examples of real code drawn from past flaws in many of the industry's highest-profile applications. Coverage includes • Code auditing: theory, practice, proven methodologies, and secrets of the trade • Bridging the gap between secure software design and post-implementation

review • Performing architectural assessment: design review, threat modeling, and operational review • Identifying vulnerabilities related to memory management, data types, and malformed data • UNIX/Linux assessment: privileges, files, and processes • Windows-specific issues, including objects and the filesystem • Auditing interprocess communication, synchronization, and state • Evaluating network software: IP stacks, firewalls, and common application protocols • Auditing Web applications and technologies

It provides a comprehensive background of fundamental theory, the utilisation of newly-developed techniques, incorporates the most complex and advanced types of technical innovation currently available and presents a vision for future developments. Satellite Navigation Systems (SNS), long range navigation systems, short range navigation systems and navigational displays are introduced, and many other detailed topics include Radio Navigation Systems (RNS), Inertial Navigation Systems (INS), Homing Systems, Map Matching and other correlated-extremalsystems, and both optimal and sub-optimal filtering in integrated navigation systems.

**Comparative Takeover Regulation** Umakanth Varottil, Wai Yee Wan, 2017-10-26 While Western economies generally display dispersed shareholding in listed companies, Asian economies commonly have concentrated shareholding also in publicly listed companies. The principal analysis in Comparative Takeover Regulation relates to the role of takeover regulation in different economies. In the Asian context, the nature of takeover regulation may necessitate a different approach, with greater emphasis on the mandatory bids and disclosure of substantial shareholding. The likelihood of hostile takeovers will be minimal. It is these differences among various jurisdictions that strike at the heart of Varottil and Wan's new work. Ideal for educational institutions that teach corporate law, corporate governance, and mergers and acquisitions, as well as for law firms,

corporate counsel and other practitioners, Comparative Takeover Regulation provides students and scholars with brand new analysis of this increasingly important field of study.

**Intelligent Communication Technologies and Virtual Mobile Networks** S. Balaji, Álvaro Rocha, Yi-Nan Chung, 2019-08-12 This book presents the outcomes of the Intelligent Communication Technologies and Virtual Mobile Networks Conference (ICICV 2019) held in Tirunelveli, India, on February 14–15, 2019. It presents the state of the art in the field, identifying emerging research topics and communication technologies and defining the future of intelligent communication approaches and virtual computing. In light of the tremendous growth ICT, it examines the rapid developments in virtual reality in communication technology and high-quality services in mobile networks, including the integration of virtual mobile computing and communication technologies, which permits new technologies based on the resources and services of computational intelligence, big data analytics, Internet of Things (IoT), 5G technology, automation systems, sensor networks, augmented reality, data mining, and vehicular ad hoc networks with massive cloud-based backend. These services have a significant impact on all areas of daily life, like transportation, e-commerce, health care, secure communication, location detection, smart home, smart city, social networks and many more.

*Organic and Pervasive Computing -- ARCS 2004* Christian Müller-Schloer, Theo Ungerer, Bernhard Bauer, 2004-02-12 Where is system architecture heading? The special interest

group on Computer and Systems Architecture (Fachausschuss Rechner- und Systemarchitektur) of the German computer and information technology associations GI and ITG addressed this question and discussed it during two Future Workshops in 2002. The result in a nutshell: Everything will change but everything else will remain. Future systems technologies will build on a mature basis of silicon and IC technology, on well-understood programming languages and software engineering techniques, and on well-established operating systems and middleware concepts. Newer and still exotic but exciting technologies like quantum computing and DNA processing are to be watched closely but they will not be mainstream in the next decade. Although there will be considerable progress in these basic technologies, is there any major trend which unifies these diverse developments? There is a common denominator – according to the result of the two Future Workshops – which marks a new quality. The challenge for future systems technologies lies in the mastering of complexity. Rigid and inflexible systems, built under a strict top-down regime, have reached the limits of manageable complexity, as has become obvious by the recent failure of several large-scale projects. Nature is the most complex system we know, and she has solved the problem somehow. We just haven't understood exactly how nature does it. But it is clear that systems designed by nature, like an anthill or a beehive or a swarm of birds or a city, are different from today's technical systems that have been designed by engineers and computer scientists.

*Dialogue Across the Atlantic* Rights, Inter-American Court of Human Rights, Council of Europe, 2015 In recent years the European and Inter-American human rights courts have intensified their cooperation. This judicial dialogue is important given the similarity of the rights and freedoms protected by the respective treaties governing the work of the two courts, and the existence of equivalent criteria of admissibility and principles of interpretation. Moreover, the increasing

similarity of the issues brought before the two courts has conferred a new relevance on their respective bodies of case-law. This book, published in English and Spanish, presents a selection of the leading decisions delivered by each court in 2014. In addition to their importance in their own right, some of these cases also serve to illustrate parallels in the manner in which the two conventions are interpreted, areas where the methodology diverges and, most importantly, how the two courts are increasingly having regard to each other's approach to human-rights protection.
