Garden History John Dixon Hunt, 1992 This collection of essays explores the issues, methods, and approaches that students in landscape architecture have developed during that period to cope with the expanding subject of gardens and their history. The volume will serve as a bench mark in the field, with its range of approaches and wealth of illustrative material. Each contributor focuses upon a

specific piece of his or her research, and uses this as a basis to discuss the wider implications of the study of gardens within such contexts as botanical, horticultural, agrarian, literary, technological, social, culture, political, and art history -- Provided by publisher

Berenike 1999/2000 Steven E. Sidebotham, Willeke Wendrich, 2007-12-31 Excavations at Berenike, a Greco-Roman harbor on the Egyptian Red Sea coast, have provided extensive evidence for trade with India, South-Arabia and sub-Saharan Africa. The results of the 1999 and 2000 excavations by the joint mission of the University of Delaware, Leiden University, and UCLA, have been published in a comprehensive report, with specialists' analyses of different object groups and an overview of evidence for the trade route from the Indian perspective. The book is lavishly illustrated with photographs, drawings, plans, and a large foldout map of Berenike and Sikait.

Kinematic Evolution and Structural Styles of Fold-and-thrust Belts J. Poblet,Richard J. Lisle,2011 Fold-and-thrust belts occur worldwide, have formed in all eras of geological time, and are widely recognized as the most common mode in which the crust accommodates shortening. Much current research on the structure of fold-and-thrust belts is focused on structural studies of regions or individual structures and on the geometry and evolution of these regions employing kinematic, mechanical and experimental modelling. In keeping with the main trends of current research, this title is devoted to the kinematic evolution and structural styles of a number of fold-and-thrust belts formed

from palaeozoic to recent times. The papers included in this book cover a broad range of different topics, from modelling approaches to predict internal deformation of single structures, 3D reconstructions to decipher the structural evolution of groups of structures, palaeomagnetic studies of portions of fold-and-thrust belts, geometrical and kinematical aspects of Coulomb thrust wedges and structural analyses of fold-and-thrust belts to unravel their sequence of deformations--
