Color as Field Karen Wilkin, Carl Belz, Denver Art Museum, 2007-01-01 Color field painting, which emerged in the United States in the 1950s, is based on radiant, uninflected hues. Exemplified by the work of Helen Frankenthaler, Morris Louis, Kenneth Noland, Jules Olitski, Larry Poons, and Frank Stella, among others, these stunningly beautiful and impressively scaled paintings constitute one of the crowning achievements of postwar American abstract art. Color as Field offers a long-overdue reevaluation of this important aspect of American abstract painting. The authors examine how color field painting rejects the gestural, layered, and hyper-emotional approach typical of Willem de Kooning and his followers, yet at the same time develops and expands ideas about all-overness and the primacy of color posited by the work of other members of the abstract expressionist generation, such as Adolph Gottlieb, Hans Hofmann, Robert Motherwell, Jackson Pollock, and Mark Rothko. From the fresh historical standpoint of the 21st century, this fascinating reassessment ranges across the artists' individual approaches and their commonalities, concluding with insights into the ongoing legacy of post-1970s color field painting among present-day artists.

Art Is Life Jerry Saltz, 2022-11-01 From the Pulitzer Prize winner and bestselling author of *How to Be an Artist*: a deliciously readable survey of the art world in turbulent times Jerry Saltz is one of our most-watched writers about art and artists, and a passionate champion of the importance of art in our shared cultural life. Since the 1990s he has been an indispensable cultural voice: witty and provocative, he has attracted contemporary readers to fine art as few critics have. An early champion of forgotten and

overlooked women artists, he has also celebrated the pioneering work of African American, LGBTQ+, and other long-marginalized creators. Sotheby's Institute of Art has called him, simply, "the art critic." Now, in *Art Is Life*, Jerry Saltz draws on two decades of work to offer a real-time survey of contemporary art as a barometer of our times. Chronicling a period punctuated by dramatic turning points—from the cultural reset of 9/11 to the rolling social crises of today—Saltz traces how visionary artists have both documented and challenged the culture. *Art Is Life* offers Saltz's eye-opening appraisals of trailblazers like Kara Walker, David Wojnarowicz, Hilma af Klint, and Jasper Johns; provocateurs like Jeff Koons, Richard Prince, and Marina Abramović; and visionaries like Jackson Pollock, Bill Traylor, and Willem de Kooning. Saltz celebrates landmarks like the Obama portraits by Kehinde Wiley and Amy Serrano, writes searchingly about disturbing moments such as the Ankara gallery assassination, and offers surprising takes on figures from Thomas Kinkadee to Kim Kardashian. And he shares stories of his own haunted childhood, his time as a "failed artist," and his epiphanies upon beholding work by Botticelli, Delacroix, and the cave painters of Lascaux. With his signature blend of candor and conviction, Jerry Saltz argues in *Art Is Life* for the importance of the fearless artist—reminding us that art is a kind of channeled voice of human experience, a necessary window onto our times. The result is an openhearted and irresistibly readable appraisal by one of our most important cultural observers.

Physics in the Arts P.U.P.A. Gilbert, Willy Haeberli, 2008-06-04 *Physics in the Arts* is a concise, 288-page four-color entry in the Complementary Science Series, designed for science enthusiasts and liberal arts students requiring or desiring a well-developed discussion of physical phenomena, particularly with regard to sound and light. Topics discussed include the nature of sound and sound perception, and the fundamentals of harmony, musical photography, color perception, and color mixing. The materials are covered at a level appropriate for self-study or as a complementary textbook. A companion website for Instructors is available in Spring 2008. * Offers an alternative route to science literacy for those interested in the arts, music and photography * Popular science book with wide readership beyond the classroom at an accessible level * Material covered at a level appropriate for self-study or as a complementary textbook * Companion website for Instructors available in Spring 2008

Multidimensional Signal and Color Image Processing Using Lattices Eric Dubois, 2019-03-12 An Innovative Approach to Multidimensional Signals and Systems Theory for Image and Video Processing In this volume, Eric Dubois further develops the theory of multi-D signal processing wherein input and output are vector-value signals. With this framework, he introduces the reader to crucial concepts in signal processing such as continuous- and discrete-domain signals and systems, discrete-domain periodic signals, sampling and reconstruction, light and color, random field models, image

representation and more. While most treatments use normalized representations for non-rectangular sampling, this approach obscures much of the geometrical and scale information of the signal. In contrast, Dr. Dubois uses actual units of space-time and frequency. Basis-independent representations appear as much as possible, and the basis is introduced where needed to perform calculations or implementations. Thus, lattice theory is developed from the beginning and rectangular sampling is treated as a special case. This is especially significant in the treatment of color and color image processing and for discrete transform representations based on symmetry groups, including fast computational algorithms. Other features include: An entire chapter on lattices, giving the reader a thorough grounding in the use of lattices in signal processing Extensive treatment of lattices as used to describe discrete-domain signals and signal periodicities Chapters on sampling and reconstruction, random field models, symmetry invariant signals and systems and multidimensional Fourier transformation properties Supplemented throughout with MATLAB examples and accompanying downloadable source code Graduate and doctoral students as well as senior undergraduates and professionals working in signal processing or video/image processing and imaging will appreciate this fresh approach to multidimensional signals and systems theory, both as a thorough introduction to the subject and as inspiration for future research.

Radio and Television Regulation Hugh R. Slotten,2000-10-19 His discussion of the early years of radio examines powerful personalities - including navy secretary Josephus Daniels and commerce secretary Herbert Hoover - who maneuvered for government control of the wireless. He then considers fierce competition among companies such as Westinghouse, GE, and RCA, which quickly grasped the commercial promise of radio and later of television and struggled for technological edge and market advantage. Analyzing the complex interplay of the factors forming public policy for radio and television broadcasting, and taking into account the ideological traditions that framed these controversies, Slotten sheds light on the rise of the regulatory state.

How Vision Works Nigel Daw,2012-01-19 This book covers all aspects of the visual system from sensory aspects to eye movements, attention, and visual memory in a brief format. Each chapter describes the psychology, followed by where in the brain that aspect is dealt with, the properties of the cells in that area, and what happens if a patient has a lesion or stroke in that area.
