P-51B/C Mustang Chris Bucholtz,2022-02-17 This new volume straps the reader into the cockpit of the P-51B/C as the Mustang-equipped fighter groups of the 'Mighty Eighth' Air Force attempt to defend massed heavy bomber formations from deadly Luftwaffe fighters charged with defending the Third Reich. Luftwaffe Reichsmarschall Hermann Göring admitted that the appearance of long-range Mustangs over Berlin spelled the end of the Jagdwaffe's ability to defeat American daylight bombing. But the Mustang was far more than an escort – it was a deadly hunter that could out-perform nearly every German fighter when it was introduced into combat. Entering combat in Europe in December 1943, P-51Bs and P-51Cs had advantages over German Bf 109s and Fw 190s in respect to the altitude they could reach, their rate of climb and top speed. Initially tapped for close bomber escort, Mustangs were quickly turned loose to range ahead of the bomber stream in order to challenge German fighters before they could assemble to engage the bombers en masse. Thanks to the Mustang's superior performance, USAAF pilots effectively blunted the Luftwaffe's tried and tested tactic for destroying B-17s and B-24s. Boldness and aggression in aerial combat meant that P-51B/C pilots inflicted a rapidly mounting toll on their German counterparts in the West during the early months of 1944, contributing mightily to Allied air superiority over northern France on D-Day. This volume, packed full of first-hand accounts, expertly recreates the combat conditions and flying realities for Mustang pilots (including headline aces such as Don Blakeslee and Don Gentile, as well as lesser known aviators). It is heavily illustrated with photographs, artwork and innovative and colourful 3D ribbon diagrams, which will provide a realistic overview of the most dynamic dogfights in aviation history.

Bioconductor Case Studies Florian Hahne,Wolfgang Huber,Robert Gentleman,Seth Falcon,2010-06-09 Bioconductor software has become a standard tool for the analysis and comprehension of data from high-throughput genomics experiments. Its application spans a broad field of technologies used in contemporary molecular biology. In this volume, the authors present a collection of cases to apply Bioconductor tools in the analysis of microarray gene expression data. Topics covered include: (1) import and preprocessing of data from various sources; (2) statistical modeling of differential gene expression; (3) biological metadata; (4) application of graphs and graph rendering; (5) machine learning for clustering and classification problems; (6) gene set enrichment analysis. Each chapter of this book describes an analysis of real data using hands-on example driven approaches. Short exercises help in the learning process and invite more advanced considerations of key topics. The book is a dynamic document. All the code shown can be executed on a local computer, and readers are able to reproduce every computation, figure, and table.

Genome Data Analysis Ju Han Kim,2019-04-30 This textbook describes recent advances in genomics and bioinformatics and provides numerous examples of genome data analysis that illustrate its relevance to real world problems and will improve the reader's bioinformatics skills. Basic data preprocessing with normalization and filtering, primary pattern analysis, and machine learning algorithms using R and Python are demonstrated for gene-expression microarrays, genotyping microarrays, next-generation sequencing data, epigenomic data, and biological network and semantic analyses. In addition, detailed attention is devoted to integrative genomic data analysis, including multivariate data projection, gene-metabolic pathway mapping, automated biomolecular annotation, text mining of factual and literature databases, and integrated management of biomolecular databases. The textbook is primarily intended for life scientists, medical scientists, statisticians, data processing researchers, engineers, and other beginners in bioinformatics who are experiencing difficulty in approaching the field. However, it will also serve as a simple guideline for experts unfamiliar with the new, developing subfield of genomic analysis within bioinformatics.

Air Pollution Control Engineering Lawrence K. Wang, Norman C. Pereira, Yung-Tse Hung, 2004-07-02 A panel of respected air pollution control educators and practicing professionals critically survey the both principles and practices underlying control processes, and illustrate these with a host of detailed design examples for practicing engineers. The authors discuss the performance, potential, and limitations of the major control processes-including fabric filtration, cyclones, electrostatic precipitation, wet and dry scrubbing, and condensation-as a basis for intelligent planning of abatement systems. Additional chapters critically examine flare processes, thermal oxidation, catalytic oxidation, gas-phase activated carbon adsorption, and gas-phase biofiltration. The contributors detail

the Best Available Technologies (BAT) for air pollution control and provide cost data, examples, theoretical explanations, and engineering methods for the design, installation, and operation of air pollution process equipment. Methods of practical design calculation are illustrated by numerous numerical calculations.

Why So Few? Catherine Hill, Christianne Corbett, Andresse St. Rose, 2010 In an era when women are increasingly prominent in medicine, law and business, why are there so few women scientists and engineers? A new research report by AAUW presents compelling evidence that can help to explain this puzzle. *Why So Few? Women in Science, Technology, Engineering, and Mathematics* presents in-depth yet accessible profiles of eight key research findings that point to environmental and social barriers - including stereotypes, gender bias and the climate of science and engineering departments in colleges and universities - that continue to block women's participation and progress in science, technology, engineering, and math. The report also includes up to date statistics on girls' and women's achievement and participation in these areas and offers new ideas for what each of us can do to more fully open scientific and engineering fields to girls and women.--pub. desc.
