Stryker Combat Vehicles Gordon L. Rottman,2012-09-20 The eight-wheeled (8x8) Stryker combat light armored vehicle was adopted by the US Army in 2002 to provide a comparatively rapidly deployable contingency force with armor protection, tactical mobility, and heavy firepower, as well as advanced command, control communications, computer, intelligence, surveillance, and reconnaissance (C4ISR) capabilities. Covering the first new US Army release since the M1 Abrams MBT, this book details the conception, ongoing development and deployment of one of the most highly anticipated new AFVs in recent years, including its service in Iraq and the ensuing controversy surrounding the Stryker's varying successes.

M2/M3 Bradley David Doyle,2018-11-30 Through hundreds of color photos, the bulk previously unpublished, Images of War: M2 Bradley explores America's premier Infantry Fighting Vehicle in an unprecedented level of detail. Go inside and out the modern-day icon, then ride it into battle through the myriad of photos presented in this book. See why Bradley remains one of the most formidable armored combat vehicles of its class, even as it logs over 35 years of service. The Bradley Fighting Vehicle, made famous through extensive media coverage of the wars in Iraq and Afghanistan, is given an in-depth examination in this brand new volume. Drawing on the lessons learned in Vietnam, the Bradley was built to provide a highly mobile platform from which infantry could be inserted into the battlefield, and from which the infantry could operate. Its use soon expanded to that of a scout vehicle with anti-tank capability. Despite initial criticism from Congress, the Bradley proved itself very capable on the battlefield, destroying more Iraqi armored vehicles than did the famed Abrams tanks. Through extensive photo coverage, most never before published, this book explores the many variations of the Bradley, including the heavily armed M270 Multiple Launch Rocket System.

Combat Vehicles of Russia's Special Forces Mark Galeotti,2020-05-28 An illustrated study of both the combat vehicles of Russia's legendary Spetsnaz special forces and the whole range of unique and modified vehicles that Russia's elite units use, from combat snowmobiles to the world's biggest water-cannon. Elite forces need elite vehicles. As Vladimir Putin has devoted effort and funds into modernising Russia's armed forces and turning them into an instrument geared not just for defending the Motherland but also projecting power beyond its borders, Russia has seen a growing emphasis on special and specialist forces. Traditionally, the elite Spetsnaz commandos had to make do with regular vehicles or civilian-based 'technicals', not least to conceal their presence (or, indeed, very existence). Now, increasingly at the forefront of Russian power projection, the Spetsnaz are acquiring more capable, versatile vehicles, such as the paratroopers' BTR-D personnel carrier, and also experimenting with exotic, specialist new acquisitions, such as the Chaborz M-3 buggy and Yamaha Grizzly all-terrain vehicle. The other elite branches of Russia's forces, such as the Arctic-warfare troops of the 200th Independent Motor Rifle Brigade, the paratroopers of the Air Assault Troops (VDV), the Naval Infantry, and the elite units of the security forces are also developing and fielding new vehicles for their specialist roles, from combat snowmobiles to urban-warfare vehicles. From highly-mobile LMVs able to operate in the deserts of Syria or the streets of Ukraine, through dedicated fire-support vehicles such as the air-droppable Sprut-SD or the massive BMPT 'Terminator', to amphibious tanks and drone-equipped security trucks, these are the workhorses of Russia's special forces. This study explores all these combat vehicles in detail, combining expert analysis from Russia expert Mark Galeotti with highly accurate full-colour illustrations and photographs.

German Military Vehicles of World War II Jean-Denis G.G. Lepage,2014-11-18 This volume presents a cross-section of the most common transport vehicles produced and used by the German army. Tanks plus auxiliary vehicles such as cars, motorcycles, vans, ambulances, trucks and tractors made it possible for the troops to keep moving. These lightly armored or unarmored vehicles--aka soft skins--operated behind the front lines, maintaining supply lines, connecting armies with their home bases, and ultimately determining the outcome of battle. Beginning with the development of military vehicles in the early 1930s, this volume discusses the ways in which this new technology influenced and, to some extent, facilitated Hitler's program of rearmament. Nomenclature, standard equipment, camouflage and the combat roles of the various vehicles are thoroughly examined. Individual vehicle types are arranged and discussed by the following classifications: cars and motorcycles; trucks and tractors; half-tracks and wheeled combat vehicles. Accompanied by well-researched, detailed line drawings, each section deals with a number of individual vehicles, describing their design, manufacture and specific use.

Army's Ground Combat Vehicle (GCV) and Early Infantry Brigade Combat Team (EIBCT) Programs: Background and Issues for Congress Andrew Feickert,2011 This report looks at budget requests for the Army's Future Combat System (FCS) program, Ground Combat Vehicle (GCV) program, and brigade combat teams (BCTs). It ends with a discussion of potential issues for Congress.

Combat Vehicle Training with Thermal Imagery ,1997 Three training effectiveness experiments were conducted on a computer-based, thermal combat vehicle identification program developed under the auspices of the Product Manager for Forward Looking Infrared. The program included real thermal imagery of vehicles. The first experiment compared part-task training schedules. The second compared a self-paced trial procedure, which incorporated side by side visual corrective feedback, to a timed trial procedure, which gave only knowledge of results feedback. The third examined the effects of training at near versus far ranges. Thermal training substantially improved scores on both thermal and visible images of vehicles that had been trained, but not for other vehicles. long vehicle sets led to learning plateaus; shorter and multiple sets worked better. learning was more efficient and transfer was enhanced when soldiers responded at their own pace and received corrective visual feedback. Soldiers learned to discriminate vehicles at far ranges, although it took them twice as long as soldiers who trained on near imagery. Even with extensive training, some vehicle confusions persisted, indicating great similarity in thermal signatures for some vehicles. The findings were applied to the program. Efforts are continuing to refine it and to field it throughout the Army.--DTIC.

American Wheeled Armoured Fighting Vehicles Michael Green,2016-10-31 Numerous wheeled armoured fighting vehicles have seen service in the US armed forces on and off for over 80 years. There have been various changes of policy and twice, after the Second World War and Vietnam, they went out of favour but their use is now well established. This well researched and superbly illustrated book describes all the different types and variants since the first M1 was ordered in 1931. The M8 armoured car was widely used during World War Two but it was not until Vietnam that further wheeled AFVs came into service, notably the M706 armoured car. After a lull the US Marine Corps adopted the Light Armoured Vehicle (LAV) in 1983. The US Army first used armoured Humvees in 1994 and variants remain in service (M1141 and M1116). Other types today include the Guardian (M1117) and the Army version of the LAV names the "Stryker". To meet the operational requirements of Iraq and Afghanistan the Mine Resistant Ambush Protected vehicle (MRAP) was ordered in bulk from 2007.

United States Code United States,2013 The United States Code is the official codification of the general and permanent laws of the United States of

America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.
