**Rugby: The Art of Scrummaging** Enrique TOP0 Rodríguez,2015-12-28 As a history, a technical manual, a practical guideline of the rugby scrum, and a great coaching tool for teachers and coaches of all levels, Rugby—The Art of Scrummaging is one of the most comprehensive rugby scrum theses ever assembled and published since the inception of rugby union. Rugby—The Art of Scrummaging contains many ideas and recommendations for coaches that will allow them to produce players who understand the necessary skills, thereby increasing their enjoyment through higher efficiency. That higher efficiency will also make their involvement in the scrum much safer, something that has been at the centre of this project's focus. For coaches to teach well they have to be properly taught themselves, and the advice of all the scrummaging luminaries associated with this work will help them. Rugby—The Art of Scrummaging also presents many ideas on what might lead to better and safer scrum laws and better officiating. It does not include definitive recommendations on these two subjects, but provides a bank of information that should assist in any future reviews.

**Love, Lists, and Fancy Ships** Sarah Grunder Ruiz,2021-11-23 Sometimes a yacht, a bold bucket list, and a kiss with a handsome stranger are all a person needs to dive into the deep end of life. For the last year, yacht stewardess Jo Walker has been attempting to complete a bucket list of thirty things she wants to accomplish by her thirtieth birthday. Jo has almost everything she's ever wanted, including a condo on the beach (though she's the youngest resident by several decades) and an exciting job (albeit below deck) that lets her travel the world. Jo is on track until the death of her nephew turns her life upside down, and the list falls by the wayside. But when her two nieces show up unannounced with plans to stay the summer, they discover her list and insist on helping Jo finish it. Though the remaining eight items (which include running a marathon, visiting ten countries, and sleeping in a castle) seem impossible to complete in twelve weeks, Jo takes on the challenge. When she summons the courage to complete item number five--kiss a stranger--and meets Alex Hayes, all bets are off. As her feelings for Alex intensify and Jo's inability to confront difficult emotions about her family complicates her relationships, she must learn to quit playing it safe with her heart before she loses what matters most.

**Attached** Amir Levine,Rachel Heller,2010-12-30 Is there a science to love? In this groundbreaking book, psychiatrist and neuroscientist Amir Levine and psychologist Rachel S. F. Heller reveal how an understanding of attachment theory-the most advanced relationship science in existence today-can help us find and sustain love. Attachment theory forms the basis for many bestselling books on the parent/child relationship, but there has yet to be an accessible guide to what this fascinating science has to tell us about adult romantic relationships-until now. Attachment theory owes its inception to British psychologist and psychoanalyst John Bowlby, who in the 1950s examined the tremendous impact that our early relationships with our parents or caregivers has on the people we become. Also central to attachment theory is the discovery that our need to be in a close relationship with one or more individuals is embedded in our genes. In Attached, Levine and Heller trace how these evolutionary influences continue to shape who we are in our relationships today. According to attachment theory, every person behaves in relationships in one of three distinct ways: \*ANXIOUS people are often preoccupied with their relationships and tend to worry about their partner's ability to love them back. \*AVOIDANT people equate intimacy with a loss of independence and constantly try to minimize closeness. \*SECURE people feel comfortable with intimacy and are usually warm and loving. Attached guides readers in determining what attachment style they and their mate (or potential mates) follow. It also offers readers a wealth of advice on how to navigate their relationships more wisely given their attachment style and that of their partner. An insightful look at the science behind love, Attached offers readers a road map for building stronger, more fulfilling connections.

*What Makes Love Last?* John Gottman, Nan Silver, 2013-09-10 One of the foremost relationship experts at work today applies the insights of science toward understanding the real meaning of trust between a couple. He decodes the why behind betrayal and shows how partners can avoid or recover from unfaithfulness and maintain a loving relationship. Dr. John Gottman, the country's pre-eminent researcher on marriage, is famous for his Love Lab at the University of Washington in Seattle where he deciphers the mysteries of human relationships through scientific research. His thirty-five years of exploration have earned him numerous major awards, including from the National Institute of Mental Health, the American Psychological Association, and the American Association for Marriage and Family Therapy. Now, Dr. Gottman offers surprising findings and advice on the characteristic that is at the heart of all relationships: Trust. Dr. Gottman has developed a formula that precisely calculates any couple's loyalty level. The results determine a relationship's likely future, including the potential for one or both partners to stray. *A Love You Can Trust* shows couples how to bolster their trust level and avoid what Dr. Gottman calls the Roach Motel for Lovers. He describes how the outcome of--sliding door moments, small pivotal points between a couple, can lead either to more emotional connection or to discontent. He suggests a new approach to handling adultery and reveals the varied and unexpected non-sexual ways that couples often betray each other. *A Love You Can Trust* guides couples through an empirically tested, trust-building program that will let them repair and maintain a long-term, intimate, and romantic relationship--

web solution initial velocity  $u = 6 \text{ m/s}$  final velocity  $v = 4 \text{ m/s}$  because direction of ball has become opposite time  $t = 0.04 \text{ s}$  thus acceleration  $a = \frac{v - u}{t} = \frac{4 - 6}{0.04} = -50 \text{ m/s}^2$  after multiplying  $10 \times 100$  to make calculations simpler we get  $a = 1040 \times 100 = 104000 \text{ m/s}^2$
