Intercultural Communication Ingrid Piller,2017-06-27 Combining perspectives from discourse analysis and sociolinguistics, the second edition of this popular textbook provides students with an up-to-date overview of the field of intercultural communication. Ingrid Piller explains communication in context using two main approaches. The first treats cultural identity, difference and similarity as discursive constructions. The second, informed by bilingualism studies, highlights the use and prestige of different languages and language varieties as well as the varying access that speakers have to them.

Digital Mobile Communications and the TETRA System John Dunlop,Demessie Girma,James Irvine,2013-08-15 TETRA is a system for mobile wireless communications and this is a highly topical and comprehensive introduction to the design and applications of TETRA systems including practical examples. TETRA is comparable in structure to the world-wide successful GSM system, however, individual features of TETRA are different, often more efficient and better designed than in GSM. TETRA is therefore providing an important source for the further development of standards for mobile telecommunications. This volume is timely and one of the first to cover TETRA and related subject areas. Features include: * Detailed discussion of public and private mobile communications domain * Architecture, components and services of TETRA and * Design and operational aspects of the system Based on courses for industry, presented by the authors, *Digital Mobile Communications and the TETRA System* will prove indispensable reading for service providers, design engineers and systems managers in the private mobile communications market. It also provides a thorough grounding in general digital mobile communications for communications engineers and undergraduate and postgraduate students in telecommunications.

Random Operators Michael Aizenman,Simone Warzel,2015-12-11 This book provides an introduction to the mathematical theory of disorder effects on quantum spectra and dynamics. Topics covered range from the basic theory of spectra and dynamics of self-adjoint operators through Anderson localization--presented here via the fractional moment method, up to recent results on resonant delocalization. The subject's multifaceted

presentation is organized into seventeen chapters, each focused on either a specific mathematical topic or on a demonstration of the theory's relevance to physics, e.g., its implications for the quantum Hall effect. The mathematical chapters include general relations of quantum spectra and dynamics, ergodicity and its implications, methods for establishing spectral and dynamical localization regimes, applications and properties of the Green function, its relation to the eigenfunction correlator, fractional moments of Herglotz-Pick functions, the phase diagram for tree graph operators, resonant delocalization, the spectral statistics conjecture, and related results. The text incorporates notes from courses that were presented at the authors' respective institutions and attended by graduate students and postdoctoral researchers.

The conference was jointly organized by Thai Nguyen University of Information and Communication Technology (ICTU), the Institute of Information Technology - Vietnam Academy of Science and Technology (IoIT), Feng Chia University, Taiwan (FCU), the Japan Advanced Institute of Science and Technology (JAIST) and the National Chung Cheng University, Taiwan (CCU) with the aim of bringing together researchers, academics, practitioners and students to not only share research results and practical applications but also to foster collaboration in information and communication technology research and education. The book includes the 66 best peer-reviewed papers, selected from the 150 submissions received.

Automated Reasoning with Analytic Tableaux and Related Methods Nicola Olivetti, 2007-06-21 This book constitutes the refereed proceedings of the 16th International Conference on Automated Reasoning with Analytic Tableaux and Related Methods, TABLEAUX 2007, held in Aix en Provence, France. It covers the wide range of logics, from intuitionistic and substructural logics to modal logics (including temporal and dynamic logics), from many-valued logics to nonmonotonic logics, and from classical first-order logic to description logics.

The Routledge Handbook of Polar Law Yoshifumi Tanaka, Rachael Lorna Johnstone, Vibe Ulfbeck, 2023-07-25 Polar law describes the normative frameworks that govern the relationships between humans, States, Peoples, institutions, land and resources in the Arctic and the Antarctic. These two regions are superficially similar in terms of natural environmental conditions but the overarching frameworks that apply are fundamentally different. The Routledge Handbook of Polar Law explores the legal orders in the Arctic and Antarctic in a comparative perspective, identifying similarities as well as differences. It points to a distinct discipline of Polar law as the body of rules governing actors, spaces and institutions at the Poles. Four main features define the collection: the Arctic-Antarctic interface; the interaction between global, regional and domestic legal regimes; the rights of Indigenous Peoples; and the increasing importance of private law. While these broad themes have been addressed to varying extents elsewhere, the editors believe that this Handbook brings them together to create a comprehensive (if never exhaustive) account of what constitutes Polar law today. Leading scholars in public international and private law as well as experts in related fields come together to offer unique insights into polar law as a burgeoning discipline.

Knowledge-Driven Profit Improvement Monte Lee Matthews,2019-07-23 This book presents an innovative and radically logical way of thinking about organizational knowledge and competition that centers on discipline, integration and focus. By tapping into the previously unrealized strengths that lie in all companies, the author suggests that it is possible for companies to move beyond informational chaos to create focused and enticing new opportunities. The 12 step method presented in the first five chapters show you how to take information from feedback from assessments, surveys and audits, convert it into usable knowledge and get bottom line improvements. The strategy expands the plan-do-check-act (PDCA) model into a Plan-Do-Knowledge-Act (PDKA) process. The case studies provided reinforce the principles and the theory behind them. Significant challenges face any organization intent on becoming world-class by managing knowledge effectively. They can be classified into four types: making use of your information by integrating it, organizing the different forms of information into a manageable framework, focusing equal attention on your strengths and your weaknesses, developing decision-making criteria based on key company drivers. The 12 steps outlined in Knowledge-Driven Profit Improvement: Implementing Assessment Feedback Using PDKA Theory will show you how to make your company into a world-class organization. Features Assists companies in becoming more competitive Serves as a guide for companies to use when taking their feedback from assessments, surveys, and audits, then integrating the feedback, and prioritizing it so that financial and operational improvements can be made Allows companies to use the information they have been accruing for years Helps companies establish better business priorities for the purpose of better planning Demonstrates the significance of improvements made by using the information gained from assessments.
