International Financial Statistics, December 2017 International Monetary Fund. Statistics Dept.,2017-12-04 This paper describes the country, euro area, and world tables that provide measures of effective exchange rates, compiled by the IMF's Research Department, Statistics Department, and area departments. A nominal effective exchange rate index represents the ratio of an index of a currency's period-average exchange rate to a weighted geometric average of exchange rates for the currencies of selected countries and the euro area. A real effective exchange rate index represents a nominal effective exchange rate index adjusted for relative movements in national price or cost indicators of the home country, selected countries, and the euro area. For ease of comparison between the nominal effective exchange rate index and the real effective exchange rate index, the average exchange rate expressed in terms of US dollars per unit of each of the national currencies is also given in the index form, base 2010 = 100.

International Financial Statistics, January 2018 International Monetary Fund. Statistics Dept.,2017-12-28 This paper discusses that for countries that are members of the euro area, the exchange rates shown are expressed in national currency units per SDR or per US dollar through 1998, and in euros per SDR or per US dollar thereafter.

Data on members' IMF accounts are presented in the Fund Position section in the country tables and in four world tables. Terms and concepts of IMF accounts and the time series in the country and world tables are explained below. When a country joins the IMF, it is assigned a quota that fits into the structure of existing quotas. Quotas are considered in light of the member's economic characteristics, and take into account quotas of similar countries. The size of the member's quota determines, among other things, the member's voting power, the size of its potential access to IMF resources, and its share in allocations of SDRs.
