### **Factors and Effects of Communication in Distributed Software Development**

Ivaldir Honório de Farias Júnior, Alinne Corrêa dos Santos, Marcelo Mendonça Teixeira, Tiago Alessandro Espínola Ferreira, 2014-01-13 Literature Review from the year 2014 in the subject Computer Science - Miscellaneous, Federal Rural University of Pernambuco (Statistics and Informatics Department), course: Post-Phd, language: English, abstract: The literature and industrial practice reveal that the Distributed Software Development (DSD) is becoming a reality in most large organizations, in search of improvements in quality, productivity and cost reduction. However, although several (primary and secondary) studies have produced results for the communication process in DSD design, there is still a lack of a Systematic Tertiary Study to provide subsidies for further research and improvement on industrial practice. Our book aims at a conceptual approach concerning DSD design and consolidates knowledge about the communication process in DSD projects, especially the factors that influence the communication, the effects of communication in DSD projects and the relationship between factors and effects.

### **Simulating Wireless Communication Systems** C. Britton Rorabaugh, 2004-06-17

Simulating Wireless Communication Systems: Practical Models in C++ C. Britton Rorabaugh The practical, inclusive reference for engineers simulating wireless systems In order to keep prices within reach of the average

consumer, cellular phone and wireless data transceiver manufacturers resort to mass producing millions of units from a single design. Considering the design complexity and fabrication expense involved, typical prototyping is not practical—designs must first be tested and honed using simulation. Author C. Britton Rorabaugh brings to the table more than 20 years of experience simulating large, state-of-the-art communications systems. In *Simulating Wireless Communication Systems*, Rorabaugh explores, using C++, practical and authoritative techniques for simulating even the most complex wireless communication systems. Along the way he shows you how to create custom simulations that fit your project's intended design, so that you and your engineering team aren't forced to resort to inadequate commercial simulation packages. This book includes nearly two hundred models of practical devices for implementing wireless communication systems and major subsystems. Mathematical and statistical appendices are also included to provide useful information for those seeking to understand, set up, and use any of Rorabaugh's detailed device models. Contents include: A background and overview of simulation Discussion of a variety of model types, including Random Process, Filter, and Channel models Practical modulation and demodulation Synchronization, signal shifting, and recovery Detailed instructions for working with Galois fields A comprehensive companion Web site featuring dozens of ready-to-run software modules If you're an engineer or wireless communication project manager, then *Simulating Wireless*

Communication Systems: Practical Models in C++ will prove to be both a convenient reference and an ideal instructional manual for the creation of specialized wireless communication simulations that will enable you to bring your product to market in a cost-effective and efficient manner. C. BRITTON RORABAUGH has a BS and MS in Electrical Engineering from Drexel University and currently holds the position of Chief Scientist for a company that develops and manufactures specialized military communications equipment. He is the author of several publications on topics such as DSP, Digital Filters, and Error Coding and has experience in object-oriented design, realtime software, numerical methods, computer graphics, C++, C, SPW, MATLAB®, Visio®, TEX/LATEX, Microsoft® Office, and assembly languages for various microprocessors and DSP devices. *Feature Interactions in Software and Communication Systems* X M. Nakamura, S. Reiff-Marganiec, 2009-05-29 The International Conference on Feature Interactions in Software and Communication Systems (ICFI) has evolved out of the Feature Interaction Workshop (FIW), which started in 1992 as the leading forum for discussion and reporting on research on feature interactions in telecommunications systems. It is now concerned with feature interaction in all types of software systems. Participation includes practitioners, researchers and educators. The proceedings have been published by IOS Press since 1994.

Medicine Meets Virtual Reality 20 J.D. Westwood, 2013-03-06 Since 1992, when it began as the Medicine Meets Virtual Reality conference, NextMed/MMVR has been a forum for researchers utilizing IT advances to improve diagnosis and therapy, medical education, and procedural training. Scientists and engineers, physicians and other care providers, educators and students, military medicine specialists, futurists, and industry: all come together with the shared goal of making healthcare more precise and effective. This book presents the proceedings of the 20th NextMed/MMVR conference, held in San Diego, California, USA, in February 2013. It covers a wide range of topics: simulation, modeling, imaging, data visualization, haptics, robotics, sensors, interfaces, plasma medicine, and more. Key applications include simulator design, information-guided therapies, learning tools, mental and physical rehabilitation, and intelligence networking. During the past two

decades, healthcare has been transformed by progress in computer-enabled technology, and NextMed/MMVR has played a prominent role in this transformation.

*Product Focused Software Process Improvement* Frank Bomarius, Seija Komi-Sirviö, 2003-06-30 The Third International Conference on Product Focused Software Process Improvement (PROFES 2001) continued the success of the PROFES'99 and PROFES 2000 conferences. PROFES 2001 was organized in Kaiserslautern, Germany, September 10-13, 2001. The PROFES conference has its roots in the PROFES Esprit project (<http://www.ele.vtt.fi/profes/>), but it quickly evolved into a full fledged general purpose conference in 1999 and since then it has gained wide spread international popularity. As in previous years, the main theme of PROFES 2001 was professional software process improvement (SPI) motivated by product and service quality needs. SPI is facilitated by software process assessment, software measurement, process modeling, and technology transfer and has become a practical tool for quality software engineering and management. The conference addresses both the solutions found in practice as well as relevant research results from academia. The purpose of the conference is to bring to light the most recent findings and results in the area and to stimulate discussion between the researchers, experienced professionals, and technology providers for SPI.

Formal Methods for Executable Software Models Marco Bernardo, Ferruccio Damiani, Reiner Haehnle, Einar Broch Johnsen, Ina Schaefer, 2014-05-26 This book presents 8 tutorial lectures given by leading researchers at the 14th edition of the International School on Formal Methods for the Design of Computer, Communication and Software Systems, SFM 2014, held in Bertinoro, Italy, in June 2014. SFM 2014 was devoted to executable software models and covered topics such as variability models, automated analysis techniques, deductive verification, and runtime assessment and testing. The papers collected in the two parts (first part: modeling and verification; second part: run-time assessment and testing) of this volume represent the broad range of topics of the school.

*The Ethics of Cyberspace* Cees J Hamelink, 2000 In this book, Cees J Hamelink proposes an answer to - how should democratic societies organize cyberspace? - that puts human-rights, rather than profit, at the top of the agenda. He argues that conventional ethical approaches are all seriously flawed. There is a growing volume of moral rules, netiquettes and codes of conduct, but they are of little help in solving the moral dilemmas raised by the new technologies. In this book the author analyzes the inadequacies of current global governance policies and structures that underpin them, and argues for standards which put justice, human security and freedom first.

Engineering and Managing Software Requirements Aybüke Aurum, Claes Wohlin, 2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered, analyzed, documented, and managed throughout their complete lifecycle. Traditionally it has been concerned with technical goals for, functions of, and constraints on software systems. Aurum and Wohlin, however, argue that it is no longer appropriate for software systems professionals to focus only on functional and non-functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit. Instead, they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders, processes, and software systems, which would in turn give rise to more appropriate techniques and higher-quality systems. Following an introductory chapter that provides an exploration of key issues in requirements engineering, the book is organized in three parts. Part 1 presents surveys of state-of-the art requirements engineering process research along with critical assessments of existing models, frameworks and techniques. Part 2 addresses key areas in requirements engineering, such as market-driven requirements engineering, goal modeling, requirements ambiguity, and others. Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects. Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners, not only in

software engineering but also in other disciplines such as business process engineering and management science.
