*Equivocal Communication* Janet Beavin Bavelas,1990-04 Equivocation, non-straightforward communication which includes messages that are ambiguous, indirect, contradictory or evasive, is highlighted as an important phenomenon in this volume. The authors show how equivocation can be measured with a scaling method that offers an objective assessment of the amount and kind of equivocation that exist in a message and which can be used in a variety of research programmes. Several hundred experiments, with a wide range of subjects - from children to politicians - support the theory that equivocations occur only in situations where all direct messages would lead to negative consequences, and that communication is dependent more on situations than on individuals.

The second edition has been fully revised and updated to take into account new developments in communication and media studies: it contains an expanded section on practical communication and media skills, writing skills, designing leaflets and producing audio and video material, including scripting and planning. It is illustrated with new models and photographs and has checklist summaries for easy revision purposes.
