Equivocal Communication Janet Beavin Bavelas,1990-04 Equivocation, non-straightforward communication which includes messages that are ambiguous, indirect, contradictory or evasive, is highlighted as an important phenomenon in this volume. The authors show how equivocation can be measured with a scaling method that offers an objective assessment of the amount and kind of equivocation that exist in a message and which can be used in a variety of research programmes. Several hundred experiments, with a wide range of subjects - from children to politicians - support the theory that equivocations occur only in situations where all direct messages would lead to negative consequences, and that communication is dependent more on situations than on individuals.

More Than Words Richard Dumbleby,Graeme Burton,1992 More Than Words provides an introduction to both communication theory and practice. The authors cover the basics of communication, including communication between individuals, between groups, in organizations, and through the mass media and new technologies. The book provides a structured approach to the subject and a source of reference, with examples of the application of ideas, short practical activities, resource lists and a glossary of terms. The second edition has been fully revised and updated to take into account new developments in communication and media studies: it contains an expanded section on practical communication and media skills, writing skills, designing leaflets and producing audio and video material, including scripting and planning. It is illustrated with new models and photographs and has checklist summaries for easy revision purposes.

Combined Arms Warfare in the Twentieth Century Jonathan Mallory House,2001 The original version of this text was published in 1984 as a textbook on military history for officers in the U.S. Army. The revised version includes an appendix of terms and acronyms, and concepts are explained in nontechnical terms, making it more comprehensible to the general reader. Also incorporated is a description of combined arms warfare from the late-1970s to the end of the 20th century, which takes into account developments that were not obvious in 1984. The main topics are how the major armies of the world fight on the battlefield; what concepts, weapons, and organizations have developed for this purpose; and how the different armies have influenced each other in these developments.
