Becoming Globally Competitive in Software Matthew D. Edwards,2006-04-28 This book will teach you, the software student, practitioner and/or manager, how to become competitive in the global resource pool in which we reside. In sometimes humorous, mostly direct conversation, this book discusses understanding the customer, serving the customer, and learning to discern what really matters along the way by exploring some difficult and often unpopular subjects: The professional software talent pool is truly global and we are only grains of sand on a world beach There is more value in seeing the forest than worshiping the tree Know when to solve a problem, when to simplify, and when to be quiet Delivering a technical solution is a social problem Overpay the right people for the right reasons Serve the customer and provide immediate value or someone else will

Complex Automated Negotiations: Theories, Models, and Software Competitions Takayuki Ito,Minjie Zhang,Valentin Robu,Tokuro Matsuo,2012-09-13 Complex Automated Negotiations are a widely studied, emerging area in the field of Autonomous Agents and Multi-Agent Systems. In general, automated negotiations can be complex, since there are a lot of factors that characterize such negotiations. For this book, we solicited papers on all aspects of such complex automated negotiations, which are studied in the field of Autonomous Agents and Multi-Agent Systems. This book includes two parts, which are Part I: Agent-based Complex Automated Negotiations and Part II: Automated Negotiation Agents Competition. Each chapter in Part I is an extended version of ACAN 2011 papers after peer reviews by three PC members. Part II includes ANAC 2011 (The Second Automated Negotiating Agents Competition), in which automated agents who have different negotiation strategies and implemented by different developers are automatically negotiate in the several negotiation domains. ANAC is an international competition in which automated negotiation strategies, submitted by a number of universities and research institutes across the world, are evaluated in a tournament style. The purpose of the competition is to steer the research in the area of bilateral multi-issue, closed negotiation. This book includes rules, results, agents and domains descriptions for ANAC2011 submitted by organizers and finalists.

Global Competitiveness of the U. S. Computer Software and Service Industries DIANE Publishing Company,1995-10 Assesses the global competitiveness of the U.S. computer software and service industries through an examination of distinct market segments. Examines external factors, such as government policies (intellectual property protection, telecommunications regulations, and export controls), and education trends. Internal factors are also examined such as host management strategies and product development strategies, that impact these industries. The analysis focuses primarily on the U.S., Europe, and Japan. Charts, tables and graphs.

Management of Software Engineering Innovation in Japan Yasuo Kadono,2015-10-14 This book assesses the achievements of the software engineering discipline as represented by IT vendors in Japan in order to deepen understanding of the mechanisms of how software engineering capabilities relate to IT vendors' business performance and business environment from the perspective of innovation and engineering management. Based on the concepts of service science and science for society, the volume suggests how to improve the sophistication of services between the demand side, i.e., IT user companies, and the supply side, i.e., IT vendors, simultaneously. The author and his colleagues developed a structural model including innovational paths, such as service innovation, product innovation and process innovation, and a measurement model including the seven software engineering capabilities: deliverables, project management, quality assurance, process improvement, research and development, human resource development and customer contact. Then they designed research on software engineering excellence and administered it with the Japanese Ministry of Economy, Trade and Industry and Information-Technology Promotion Agency. Through statistical analyses of the results, they found that human resource development and R&D are significant fundamental conditions to improve the quality of the deliverables and that IT firms with high levels of deliverables, derived from high levels of human resource development, quality assurance, project management and process improvement, tend to sustain high profitability. In addition, they developed a measurement model based on Porter's five forces and Barney's resource-based view. A regression tree analysis suggested that manufacturer spin-off vendors tend to expand business with well-resourced R&D, whereas user spin-off vendors tend to depend heavily on parent company demand.

Towards a Peace Economy in the United States Gregory A. Bischak,1991-06-18 The essays in this volume consider the nature of the war economy and the possibilities for change that the relaxation of the Cold War presents. They ask what the effects of a security policy of substantial disarmament on the economy and political climate of the USA might be.

The Structure of Political Competition in Western Europe Zsolt Enyedi,Kevin Deegan-Krause,2013-09-13 Is European party politics hovering above society? Why do voters pick one party over others? Is it a question of class? Of religion? Of attitudes about taxes or immigration or global warming? Or is it something else entirely? The Structure of Political Competition in Western Europe takes a detailed look at the ways in which Western Europe's party systems are anchored in social and ideological structures. The book's first section focuses on the role of social structures - particularly education, class and religion - and analyzes the complex interplay among these factors. The second section addresses the ways that the sociological structures such as class and religion interact with voters' values. The third section examines the way that these structures and values shape the space of political competition among parties. The conclusion integrates the findings of the empirical articles, putting them into broader comparative perspective, discussing whether relatively predictable structures have been overwhelmed by media-driven spectacles, political personalities and focus on short-term economic performance. This volume will appeal to scholars and graduate students in Europe and those from North America, Asia and other regions who study European politics, political parties, cleavages and political behaviour. This book was published as a special issue of West European Politics.

The Software Interface Between Copyright and Competition Law Ashwin van Rooijen,2010-01-01 The success of computer programs often depends on their ability to interoperate ' or communicate ' with other systems. In proprietary software development, however, the need to protect access to source code, including the interface information

The Efficiency and Creativity of Product Development Fumihiko Ikuine,2022-01-21 This is the first book that comprehensively describes the history of the game software industry in Japan. A major objective here is to identify the key determinants of the emergence of the business, the maturing of the market, and the changes brought about by innovations, based on the history of the Japanese industry. To date, similar books have focused only on particular topics of the game software industry, such as the success of Nintendo and Sony and the uniqueness of the Japanese industry. There are no books that interpret the development process of this industry from the point of view of innovation. To fully understand the business and derive insightful lessons from it, however, requires a careful and thorough examination of its development process. Currently, many companies aim to improve efficiency by using information and communications technology (ICT), but it is difficult to maintain a balance between the pursuit of efficiency and the encouragement of creativity. In the case of Japan's game software industry, firms have pursued higher efficiency in product development to build competitive advantage, resulting in a low rate of radical innovation and causing the slow growth of the industry. In certain situations, the development activities that target the creation of new products may, in themselves, hinder the creation of truly new products. This book conceptualizes this phenomenon as a "development productivity dilemma" and clarifies the mechanisms behind it. The dilemma, like the productivity dilemma in the manufacturing industry, evokes a certain innovation pattern and prevents potential growth. Understanding the lessons from the game software business presented in this book, managers, researchers, and policymakers can gain insight into the mechanisms leading to industrial maturity and clues to avoid the development productivity dilemma.

RNA 3D Structure Analysis and Prediction Neocles Leontis,Eric Westhof,2012-06-05 With the dramatic increase in RNA 3D structure determination in recent years, we now know that RNA molecules are highly structured. Moreover, knowledge of RNA 3D structures has proven crucial for understanding in atomic detail how they carry out their biological functions. Because of the huge number of potentially important RNA molecules in biology, many more than can be studied experimentally, we need theoretical approaches for predicting 3D structures on the basis of sequences alone. This volume provides a comprehensive overview of current progress in the field by leading practitioners employing a variety of methods to model RNA 3D structures by homology, by fragment assembly, and by de novo energy and knowledge-based approaches.

Agile Processes in Software Engineering and Extreme Programming – Workshops Peggy Gregory,Philippe Kruchten,2021 This open access book constitutes papers from the 5 research workshops, the poster presentations, as well as two panel discussions which were presented at XP 2021, the 22nd International Conference on Agile Software Development, which was held online during June 14-18, 2021. XP is the premier agile software development conference combining research and practice. It is a unique forum where agile researchers, practitioners, thought leaders, coaches, and trainers get together to present and discuss their most recent innovations, research results, experiences, concerns, challenges, and trends. XP conferences provide an informal environment to learn and trigger discussions and welcome both people new to agile and seasoned agile practitioners. The 18 papers included in this volume were carefully reviewed and selected from overall 37 submissions. They stem from the following workshops: 3rd International Workshop on Agile Transformation 9th International Workshop on Large-Scale Agile Development 1st International Workshop on Agile Sustainability 4th International Workshop on Software-Intensive Business 2nd International Workshop on Agility with Microservices Programming.

Strategic Value Proposition Innovation Management in Software Startups for Sustained Competitive Advantage Varun Gupta,2022-11-18 This book aims to increase the success rates of startups by focusing on value proposition innovation, which is propelled by the involvement of potential consumers as well as other resources such as freelancers and strategic relationships with academia. The author shows how startups who are resource constrained can invest efforts exploring the potential market of their products. The author also explores how global markets can be beneficial for a startup's success, while showing the workarounds in hard-to-access markets. The book investigates gaining knowledge shared by freelancers, customers, and academia, whose involvement can be crucial in supporting value proposition innovation activities such as ideas generation, implementation, and commercialization. Combined, the author leads readers to discover their ability to foster value proposition innovations that result into long term competitive advantage in a highly fluctuating business environment.
