Head First Networking Al Anderson, Ryan

Benedetti, 2009-05-27 Frustrated with networking books so chock-full of acronyms that your brain goes into sleep mode? Head First Networking's unique, visually rich format provides a task-based approach to computer networking that makes it easy to get your brain engaged. You'll learn the concepts by tying them to on-the-job tasks, blending practice and theory in a way that only Head First can. With this book, you'll learn skills through a variety of genuine scenarios, from fixing a malfunctioning office network to planning a network for a high-technology haunted house. You'll learn exactly what you need to know, rather than a laundry list of acronyms and diagrams. This book will help you: Master the functionality, protocols, and packets that make up real-world networking Learn networking concepts through examples in the field Tackle tasks such as planning and diagramming networks, running cables, and configuring network devices such as routers and switches Monitor networks for performance and problems, and learn troubleshooting techniques Practice what you've learned with nearly one hundred exercises, questions, sample problems, and projects Head First's popular format is proven to stimulate learning and retention by engaging you with images, puzzles, stories, and more. Whether you're a network professional with a CCNA/CCNP or a student taking your first college networking course, Head First Networking will help you become a network guru.

Computer Networking for Educators Ted D. E. McCain, Mark Ekelund, 1993 This book is intended to introduce the basic concepts of connecting computers together and to equip individuals with the technical background necessary to begin constructing small networks. For those already experienced with creating and maintaining computer networks, the book can help in considering the creation of a schoolwide network. The book is divided into two main sections: an introduction to networking in schools (6 chapters) and an introduction to the technical side of networking (10 chapters). The chapter headings are as follows: (1) How Can Networking Enhance the Use of Computers? (2) Advanced Networking Concepts; (3) Why Network Classroom Computers? (4) Why Network Computers for Administration? (5) Why Consider School-Wide Networking? (6) How To Plan a School-Wide Network; (7) Technical Details for Both IBM-Compatible and Macintosh Computers; (8) Technical Issues in IBM-Compatible Networking; (9) Simple Network Examples for IBM-Compatible Computers; (10) Complex Network Examples for IBM-Compatible Computers; (11) Technical Issues in Macintosh Networking; (12) Simple Network Examples for Macintosh Computers; (13) Complex Network Examples for Macintosh Computers; (14) A Complex Network Example Using IBM-Compatible and Macintosh Computers; (15) Networking for Apple II Computers; and (16) A Look in the Crystal Ball. Collaborative Computing: Networking, Applications and Worksharing Elisa Bertino, James Joshi, 2009-07-25

CollaborateCom is an annual international forum for dissemination of original ideas and research results in collaborative computing networks, systems, and applications. A major goal and feature of CollaborateCom is to bring researchers from networking, systems, CSCW, collaborative learning, and collaborative education areas - together. CollaborateCom 2008 held in Orlando, Florida, was the fourth conference of the series and it reflects the accelerated growth of collaborative computing, both as research and application areas. Concretely, recent advances in many computing fields have contributed to the growing interconnection of our world, including multi-core architectures, 3G/4G wireless networks, Web 2.0 technologies, computing clouds, and software as a service, just to mention a few. The potential for collaboration among various components has exceeded the current capabilities of traditional approaches to system integration and interoperability. As the world heads towards unlimited connectivity and global computing, collaboration becomes one of the fundamental challenges for areas as diverse as eCommerce, eGovernment, eScience, and the storage, management, and access of information through all the space and

time dimensions. We view collaborative computing as the glue that brings the components together and also the lubricant that makes them work together. The conference and its community of researchers demonstrate the concrete progress we are making towards this vision. The conference would not have been successful without help from so many people.
