Computer-assisted Reporting Bruce Garrison,2020-07-20 Reporters in the newsroom are becoming more involved in computer-assisted reporting and online news research than ever before. This edition introduces readers to computer-assisted reporting and to describe how leading journalists are using personal computers for news gathering in modern print, broadcast, and online newsrooms. It provides a thorough discussion of technology and its applications to news reporting. Computer Assisted Reporting focuses on the computerization of newsgathering, highlighting the fact that the computer assists journalists by making writing easier, and also makes gathering and organizing information more efficient. As it begins, the book demonstrates methods for journalists to get more from their computers, such as data retrieval, data analysis, information storage, and dissemination of that information in both processed and unprocessed forms. It concludes with a refined proposal, originally proposed in the first edition, for five stages for development of computer literacy in the newsroom.

*Successful Strategies for Computerassisted Reporting* Bruce Garrison,2013-10-18 Computers have changed the landscape of both gathering and disseminating information throughout the world. As journalists quickly move toward the 21st century and perhaps, a new era of electronic journalism, resources are needed to understand the newest and most successful computer-based news reporting strategies. Written to serve that purpose, this book is designed to show both professional journalists and students which of the newest personal computing tools are being used by the nation's leading news organizations and top individual journalists. It further describes how these resources are being used on a daily basis and for special projects. In recent years, computers have taken on new and dominating roles in the process of news analysis, newsgathering, and news processing. Today's forward-thinking journalists often seek guidance over what they can do to strengthen their ability to be society's information processors and managers. This volume focuses upon how successful journalists are using computers through a major national computer-assisted reporting (CAR) study of daily newspapers. The study included two national surveys and a series of personal interviews with many of the nation's leading CAR specialists. Several current examples of stories used for successful database- and online-oriented news assignments are provided as part of a series of case studies incorporated throughout the book. The additional depth of description and the presentation of portions of stories themselves should help readers to understand the complete process involving CAR-oriented journalism. Substantial analytical detail is used to discuss the extent of computer use in newsrooms, computer training, CAR projects, CAR in daily reporting, hardware and software most commonly used, levels and types of online services used in news research, and portable hardware and software. The book concludes with the author's assessment of the effects and impact of personal computing in the newsroom and the future of personal computer applications in newsgathering. Explaining and defining advanced applications or terminology for readers, the approach to the book assumes a minimal familiarity with computers, but no advanced knowledge of computer operation.

**Computer-Assisted Reporting** Brant Houston,2014-11-21 This straightforward and effective how-to guide provides the basics for any journalist or student beginning to use data for news stories. It has step-by-step instructions on how to do basic data analysis in journalism while addressing why these digital tools should be an integral part of reporting in the 21st century. The book pays particular attention to the need for accuracy in computer-assisted reporting and to both the potential and pitfalls in utilizing large datasets in journalism. An ideal core text for courses on data-driven journalism or computer-assisted reporting, Houston pushes back on current trends by helping current and future journalists become more accountable for the accuracy and relevance of the data they acquire and share. Online instructor's materials are available to adopting professors, and additional exercises are available free online to students at the below address:

**Computer-assisted Investigative Reporting** Margaret H. DeFleur,2013-11-26 Conducting computer analyses for the purposes of revealing information of significance to the press represents an extension of one of the most important forms of American journalism into the contemporary era of new technologies. Investigative reporting had its start with the establishment of the metropolitan newspaper during the early decades of the 1900s. At the time, it was a continuation of the evolving tradition of freedom of the press that had characterized American political life since colonial times. As it developed, investigative reporting stressed facts rather than the opinions of the editor or reporter. In turn, that tradition had its own intellectual roots. Today, computer-assisted investigative reporting (CAIR) extends that marketplace of ideas into systematic examinations of the electronic records of government. In addition, computer analyses of other kinds of information systematically gathered by journalists can provide the press with insights into trends and patterns unlikely to be revealed by other means. This unique volume addresses procedures and issues in investigative journalism that have not been explained in other publications. It sets forth -- for the first time -- a detailed and specific methodology for conducting computer-assisted investigative analyses of both large and small scale electronic records of government and other agencies. That methodology consists of the logic of inquiry, strategies for reaching valid conclusions, and rules for reporting what has been revealed by the analyses to the public in clear ways. Such systematic methodologies are essential in social and other sciences and the development of a counterpart for investigative journalism has been badly needed. That systematic methodology is developed within a context that explains the origin and major characteristics of those elements that have come together in American society to make computer-assisted investigative reporting both possible and increasingly a part of standard newsroom practices. These include the development of traditional investigative journalism, the evolution of computer technology, the use of computers by government to keep records, the legal evolution of freedom of information laws, the rapid adoption of computers in newsrooms, the increasing importance of precision journalism, and the sharp increase in recent times of computer-assisted investigative reporting by American newspapers both large and small. The issues addressed in this book are discussed in a very readable context with an abundance of examples and illustrations drawn from the real world of journalism as it is practiced daily in newsrooms around the country. Explanations of concepts, principles, and procedures are set forth in layperson's terms that require very little in the way of knowledge of computers or statistical methods.

**The Electronic Grapevine** Diane L. Borden,Kerric Harvey,2013-11-05 The widespread use of the Internet as a tool for gathering and disseminating information raises serious questions for journalists--and their readers--about the process of reporting information. Using virtual sources and publishing online is changing the way in which journalism takes place and its effect on the society it serves. USE LAST THREE PARAGRAPHS ONLY FOR GENERAL CATALOGS... The Electronic Grapevine explores the use of online media by reporters in the United States, and examines the impact that usage may have on how journalism is framed in the cultural sphere, as well as how it is conducted in the professional one. It contains a mix of material examining how it feels to do online journalism, how it affects those who consume it, different ways that media scholars go about trying to understand it better, and the likely social and cultural impact of Internet-like technologies on the public, at whom all this electronic information is eventually aimed. Drawing from the emerging scholarly work in the field and from the real-life experiences of working journalists, Borden and Harvey collect contributions that examine why journalists use the Internet, what changes it makes in how they approach their jobs, and what differences they see in conducting their daily newsgathering with this medium rather than other methods. The volume also analyses when and why journalists do not use online media and what the impact of the decision to use or not use the Internet may mean for the outer world, whose perceptions of itself are so often shaped by journalistic portrait. This series of thought-provoking, original essays explores the impact of computer-based information and communication services on traditional journalistic routines and practices, and thereby addresses a critical gap in the scholarly literature on communication, law, and culture. Distinguishing between linkage devices like the Internet, and database resources such as LEXIS/NEXIS, America Online, and others, this book examines the ways in which both types of online services may reshape and redefine not only the products of journalistic effort, but the newsgathering process itself.
