Home and Small Business Guide to Protecting Your Computer Network, Electronic Assets, and Privacy Philip Alexander, 2009-04-30 In the news on a daily basis are reports of lost or stolen computer data, hacker successes, identity thefts, virus and spyware problems, and network incursions of various kinds. Many people, especially nonprofessional administrators of home or small business networks, feel helpless. In this book, technical security expert Philip Alexander explains in layman's terms how to keep networks and individual computers safe from the bad guys. In presenting solutions to these problems and many others, the book is a lifeline to those who know their computer systems are vulnerable to smart thieves and hackers—not to mention tech-savvy kids or employees who are swapping music files, stealing software, or otherwise making a mockery of the word security. In his job protecting data and combating financial fraud, Philip Alexander knows well which power tools are required to keep hackers and thieves at bay. With his gift for putting technical solutions in everyday language, Alexander helps readers with home and/or small business networks protect their data, their identities, and their privacy using the latest techniques. In addition, readers will learn how to protect PDAs and smartphones, how to make hardware thefts more unlikely, how to sniff out scammers and the motives of offshore tech support personnel who ask too many questions, and how to keep personal information safer when shopping over the Internet or telephone.

All about your Computer Kenneth A Spencer,2014-06-01 Almost everyone these days has a computer. Some may just send and receive email, or browse the World Wide Web. Others write letters or do their home accounts on it. Most people have a basic understanding of how to use a computer, but have no idea how it does the things it does. This book is aimed at anyone in that latter category: anyone who uses a computer, perhaps has never seen inside it, and has no idea how a machine could possibly do all the things it does. But yes, one who is prepared to invest some time and effort in developing understanding of the technology.
