Molly Ivins Can't Say That, Can She? Molly Ivins,1992-09-15 Whether she's writing about redneck politics in her native Texas or the discreet charms of Bushwazee, Molly Ivins is never less than devastatingly honest—and hilarious. Our toughest, funniest, and savviest columnist delivers the goods on: -Texas politics: Well, our attorney general is under indictment. He ran as 'the people's lawyer'; now we call him 'the people's felon.' -The flag burning debate: Bush's last birthday cake was in the form of the American flag, and he ate it—stars, stripes, and all. Think about where that flag wound up—I call that desecration. -Beign a woman in Texas: There are several strains of Texas culture: They are all rotten for women... One not infrequently sees cars or trucks sporting the bumper sticker Have fun—beat the hell out of someone you love.

Statistical Relational Artificial Intelligence Luc De Raedt,Kristian Kersting,Sriraam Natarajan,David Poole,2016-03-24 An intelligent agent interacting with the real world will encounter individual people, courses, test results, drugs prescriptions, chairs, boxes, etc., and needs to reason about properties of these individuals and relations among them as well as cope with uncertainty. Uncertainty has been studied in probability theory and graphical models, and relations have been studied in logic, in particular in the predicate calculus and its extensions. This book examines the foundations of combining logic and probability into what are called relational probabilistic models. It introduces representations, inference, and learning techniques for probability, logic, and their combinations. The book focuses on two representations in detail: Markov logic networks, a relational extension of undirected graphical models and weighted first-order predicate calculus formula, and Problog, a probabilistic extension of logic programs that can also be viewed as a Turing-complete relational extension of Bayesian networks.

This covers topics such as renewable energy supply, energy storage and e-mobility, efficiency in data centers and networks, sustainable food and water supply, sustainable health, industrial production and quality, etc. The book describes computational methods and possible application scenarios.

Boosted Statistical Relational Learners Sriraam Natarajan,Kristian Kersting,Tushar Khot,Jude Shavlik,2015-03-03 This SpringerBrief addresses the challenges of analyzing multi-relational and noisy data by proposing several Statistical Relational Learning (SRL) methods. These methods combine the expressiveness of first-order logic and the ability of probability theory to handle uncertainty. It provides an overview of the methods and the key assumptions that allow for adaptation to different models and real world applications. The models are highly attractive due to their compactness and comprehensibility but learning their structure is computationally intensive. To combat this problem, the authors review the use of functional gradients for boosting the structure and

the parameters of statistical relational models. The algorithms have been applied successfully in several SRL settings and have been adapted to several real problems from Information extraction in text to medical problems. Including both context and well-tested applications, Boosting Statistical Relational Learning from Benchmarks to Data-Driven Medicine is designed for researchers and professionals in machine learning and data mining. Computer engineers or students interested in statistics, data management, or health informatics will also find this brief a valuable resource.

An Introduction to Lifted Probabilistic Inference Guy Van den Broeck, Kristian Kersting, Sriraam Natarajan, David Poole, 2021-08-17 Recent advances in the area of lifted inference, which exploits the structure inherent in relational probabilistic models. Statistical relational AI (StaRAI) studies the integration of reasoning under uncertainty with reasoning about individuals and relations. The representations used are often called relational probabilistic models. Lifted inference is about how to exploit the structure inherent in relational probabilistic models, either in the way they are expressed or by extracting structure from observations. This book covers recent significant advances in the area of lifted inference, providing a unifying introduction to this very active field. After providing necessary background on probabilistic graphical models, relational probabilistic models, and learning inside these models, the book turns to lifted inference, first covering exact inference and then approximate inference. In addition, the book considers the theory of liftability and acting in relational domains, which allows the connection of learning and reasoning in relational domains.

Probabilistic Inductive Logic Programming Luc De Raedt, Paolo Frasconi, Kristian Kersting, Stephen H. Muggleton, 2008-02-26 This book provides an introduction to probabilistic inductive logic programming. It places emphasis on the methods based on logic programming principles and covers formalisms and systems, implementations and applications, as well as theory.

Lord of the World Robert Hugh Benson, 1908 The novel's protagonist is a British Roman Catholic priest, Father Percy Franklin, who looks identical to the mysterious U.S. Senator Julian Felsenburgh of Vermont. The senator appears as a lone and dramatic figure promising world peace in return for blind obedience. No one quite knows who he is or where he comes from, but his voice mesmerizes. Under his leadership, war is abolished. Felsenburgh becomes the President of Europe, then of the world, by popular acclaim. Everyone is fascinated with him, yet still no one knows much about him. People are both riveted and frightened by the way he demands attention. Most follow without question. Having been a close observer of President Felsenburgh's rise, Father Franklin is called to Rome, a Hong Kong-style enclave ruled by Pope John XXVI and raised to the College of Cardinals. Meanwhile, defections among bishops and priests increase. At Cardinal Franklin's instigation, the pope abolishes the Eastern Catholic Churches and forms a new religious order, the Order of Christ Crucified. All its members, including the Pope, vow to die in the name of the faith.

The Handy Hockey Answer Book Stan Fischler, 2015-10-13 Stick handlers without helmets rushing goaltenders without masks on rinks lacking side boards gives way to a faster game with bigger players and overtime shootouts. The National Hockey League goes from a Canadian and regional sport to one that is watched by more fans throughout North America than ever. Hockey may have changed, but its essence and appeal remain. The Handy Hockey Answer Book, written by hockey historian, broadcaster, author and self-professed Hockey Maven, Stan Fischler, brings the game to life through exciting game action, vital stats, players, rules, and more. It traces the early spread of hockey, Lord Stanley's involvement, and the birth of the cup, then explains the rules, the equipment, strategies, and positioning, before following the ups and downs of the National Hockey League and its teams and players. From the traditions, all-time cup- and award-winners and record-breakers to the modern game, The Handy Hockey Answer Book answers more than 800 questions on the game, greats, goals, and growing popularity of hockey, including ... Where does hockey come from? What was the Stanley Cup first called? Where did the name "Patrick Division" come from and why are the Patrick brothers important? When was six-man hockey invented and who was its creator? What is a "Zamboni" and after whom was it named? What was the Gretzky Rule? How did the hockey puck develop its present shape? Which is the oldest current NHL team? Why is the term "Original Six" a misnomer? Which Hall of Famer trained on champagne? Who holds the Montreal Canadiens's franchise

record for career goals? Who centered Gordie Howe and Ted Lindsey on Detroit's legendary "Production Line." Which team was the first to come back from being down 3-0 in a series. Who played right wing on a line with Phil Esposito for the Bruins in the late 60s and 70s? Who was the first European player to lead the league in scoring? What NHL team won and lost the Stanley Cup on the same day? Which hockey player was supposed to be "kidnapped" as part of a scheme to increase attendance at New York Rangers games? Did an NHL club ever play all its "home" games of the Stanley Cup finals on the road? A glossary of terms and a bibliography for further reading round out this helpful primer on the sport.

Introduction to Statistical Relational Learning Lise Getoor, Ben Taskar, 2019-09-22 Advanced statistical modeling and knowledge representation techniques for a newly emerging area of machine learning and probabilistic reasoning; includes introductory material, tutorials for different proposed approaches, and applications. Handling inherent uncertainty and exploiting compositional structure are fundamental to understanding and designing large-scale systems. Statistical relational learning builds on ideas from probability theory and statistics to address uncertainty while incorporating tools from logic, databases and programming languages to represent structure. In *Introduction to Statistical Relational Learning*, leading researchers in this emerging area of machine learning describe current formalisms, models, and algorithms that enable effective and robust reasoning about richly structured systems and data. The early chapters provide tutorials for material used in later chapters, offering introductions to representation, inference and learning in graphical models, and logic. The book then describes object-oriented approaches, including probabilistic relational models, relational Markov networks, and probabilistic entity-relationship models as well as logic-based formalisms including Bayesian logic programs, Markov logic, and stochastic logic programs. Later chapters discuss such topics as probabilistic models with unknown objects, relational dependency networks, reinforcement learning in relational domains, and information extraction. By presenting a variety of approaches, the book highlights commonalities and clarifies important differences among proposed approaches and, along the way, identifies important representational and algorithmic issues. Numerous applications are provided throughout.

An Inductive Logic Programming Approach to Statistical Relational Learning Kristian Kersting, 2006 Talks about Logic Programming, Uncertainty Reasoning and Machine Learning. This book includes definitions that circumscribe the area formed by extending Inductive Logic Programming to cases annotated with probability values. It investigates the approach of Learning from proofs and the issue of upgrading Fisher Kernels to Relational Fisher Kernels.

A Brief Introduction to Probability and Statistics William Mendenhall, Robert J. Beaver, Barbara M. Beaver, 2002 This brief version of the authors' classic text retains the traditional outline for the coverage of descriptive and inferential statistics. The user-friendly presentation includes features such as Key Concepts and Formulas, and helps students grasp the material while not sacrificing the statistical integrity of the subject. MINITABO (Versions 12 and 13) is used exclusively as the computer package for statistical analysis in this text.

Gowers Review of Intellectual Property Andrew Gowers, Great Britain: H.M. Treasury, 2006-12-06 This report examines the importance of intellectual property (IP), ranging from patents, copyright, design and trade marks, and whether in the age of globalization, digitization and increasing economic specialization it still creates incentives for innovation, without unduly limiting access to consumers and stifling further innovation. The report does recommend a radical overhaul of the system, with the review concentrating on three areas, and setting out the following recommendations: (i) strengthening enforcement of IP rights, whether through clamping down on piracy or trade in counterfeit goods; (ii) reducing costs of registering and litigating IP rights for businesses large and small; (iii) improving the balance and flexibility of IP rights to allow individuals, businesses and institutions to use content in ways consistent with the digital age.

My Family and the Galapagos Monty Halls, 2020-02-13 The Galapagos Islands have captured hearts and captivated imaginations for centuries. Such is their ecological importance that in 1978 the archipelago was declared the first ever World Heritage Site, a testament to our collective desire to preserve the magic and diversity that inspired Darwin. Monty Halls first visited the islands almost twenty years ago and his immediate fascination with their wild beauty would go on to shape the rest of his life. As an explorer, marine biologist, ex-Royal Marine and now President of the Galapagos Conservation Trust, Monty is a passionate advocate for those fighting to save the Galapagos. In 2017, he and his dedicated research team - his wife, Tam, and their two young daughters, Molly and Isla - moved to Santa Cruz to experience just what life is like in the world's most spectacular tourist destination. As weeks turned into months, the Halls family were in turn spellbound by the beauty of the islands and heartbroken by the devastation that humans are inflicting upon them. One stint there was never going to be enough, and just two years later they found themselves heading back, this time staying on one of the remotest and most challenging islands, diving into the culture of the Galapagos and the desperately needed conservation work taking place there. Written with warmth, humour, and authority, *My Family and the Galapagos* follows Monty and his family as they navigate

life on the most important archipelago on the planet and strive to preserve it for generations to come.
