*Finding History* Christine Bombaro, 2012-09-06 In today's world of modern research methods, the irony is that even though more materials are readily available now than ever before, this proliferation of sources has actually made the process more difficult for the novice researcher. In addition, today's professors expect high-quality sources to be used in students' undergraduate research precisely because so much information is available; however, without instruction, many students are not even aware of the standard history sources that they should be using

routinely for history research projects. Finding History is a practical and modern guide to research for history projects, helping to sort through the available resources and technology for students, scholars, and librarians. Finding History includes practical, step-by-step instructions for discovering historical evidence using library catalogs, databases, and websites. It simplifies and clarifies the research process so that students new to the experience may locate appropriate research material with the same skill as seasoned historians. This book addresses the information literacy skills defined by the American Library Association and the American Historical Association, which include recognizing the need for scholarly historical information; defining and identifying the need for primary, secondary, and tertiary sources; knowing what finding tools are available to help locate historical sources; using history research tools efficiently and effectively; learning research vocabulary as well as the vocabulary of the historical profession; making evaluative judgments about the scholarly value of materials once they are located; physically acquiring research materials; using research material effectively to support a thesis or argument; and using research material ethically and responsibly. Including search samples and tables, Finding History is a valuable resource for anyone wanting to ensure their research draws from the best available sources and those needing instruction in locating, obtaining, evaluating, and using scholarly sources efficiently, directly, and ethically.

**Slides for Students** Gary D. Fisk, 2018-10-16 300 million powerpoint presentations are given daily, yet there is a disconnect between the amazing technology of powerpoint and a mediocre student learning experience. To unleash the full potential of powerpoint presentations, we must do a better job of creating presentations that fit the educational needs of students. Slides for Students does just that. Slides for Students is an open and honest discussion about powerpoint in the classroom. A need

exists for thoughtfully designed and implemented classroom instruction that focuses on the learner rather than on the technology. This book was written to translate academic research findings into practical suggestions about powerpoint that educators can use. Divided into two parts, *Slides for Students* discusses the history of powerpoint, explores academic studies on the topic, and demonstrates how to design slides to best suit educational needs and engage with students to avoid the dreaded death by powerpoint.

*Supporting Indigenous Students to Succeed at University*

Martin Nakata, Vicky Nakata, 2022-12-13 Addressing a significant gap in the literature, this book provides conceptual and practical foundations for the development of more effective support strategies to improve academic outcomes for Indigenous higher education students. Authors Martin and Vicky Nakata draw on Indigenous and higher education research, as well as their own experience implementing reforms to Indigenous student support services in Australian universities, to present a method that focuses on helping students to develop the skills and capabilities they need to thrive at university. The book is divided into three sections, the first outlining fifteen key concepts and conditions for student success. The second section provides detailed guidance on individual student case management, from foundational concepts through to implementation. The third section outlines what staff need to consider before attempting to implement changes to practice in their local context, offering a blueprint for assessing current practice, planning for and then implementing change. Presenting an approach that has proven successful in closing the gap between the academic outcomes of Indigenous and non-Indigenous students, this book is an essential resource for academic and non-academic staff who support underprepared students to succeed in higher education.

*Advancing and Consolidating Mathematical Modelling* Gilbert

Greefrath, Susana Carreira, Gloria Ann Stillman, 2023-04-18 This

edited volume presents applications and modelling as a world-renowned sub-field of research in mathematics education. It includes the discussion on students' development of modelling competency through the teaching of applications and modelling. The teaching of mathematical modelling is considered from different perspectives, such as mathematical, pedagogical-didactical perspectives and critical-societal or socio-political perspectives. Assessment practices (local, regional or international) of modelling activities and difficulties with modelling activities at school and university levels, respectively, are discussed. Use of technology and other resources in modelling activities and their impact on the modelling processes are included in the considerations. Teaching practices, teacher education and professional development programs concerning the integration of applications and modelling in school and university mathematics programs are developed in this context.
